>>
>
>However, what has to change is the noise power per Hz, and
>reducing the bandwidth does not change that.
>

That *Can't* be correct for all cases.
The total noise appearing in the channel is the sum of that appearing in
every Hz
within the entire channel. A narrow signal such as a radiotelegraph
signal may not
occupy the entire width of the channel. So narrowing the channel width DOES
reduce the noise while preserving the signal and improving the SNR..
Obviously where the signal is as wide as the channel this doesn't work,
but in
ham radio, working CW it sure does. Guaranteed.

>Increasing the signal power has the desired effect. There are
>other ways to accomplish that, of course. Reduction of noise by
>any means other than reducing the bandwidth (switching from an
>omni directional antenna to a directional antenna, for example)
>will have the desired effect.
>

Another example of why his stuff doesn't apply to the real world of ham
radio.
When a ham is working another station he has no control over the power that
station is injecting into the channel. What he can control is the
bandwidth,within limits of course.
Within ham radio such situations vary widely, but for CW the sitiation
is pretty well
straightforward. Hams almost always enhance CW signals by reducing the
bandwidth
which raises the SNR.

Well, well! If you truly believed that then you'd have gone on to
really learn the code
and used it long ago, instead of just complaining. After all, efficiency
means more than
anything Shannon came up with.

That's RIGHT. You've NEVER been a part of ham radio. But you can
dream.

> YOUR fantasy seems to be stuck in the rut that whatever YOU like
> "defines" what ALL other radio amateurs do, think, and must act
> like in some rigid set of rules of YOUR imagination.

Not all all, Len old boy. I realize that others have different fields
of interest within amateur radio and they might have different levels of
interest in the game. You however, aren't a part of amateur radio.

> YOU are NOT an authority or an official anything in US ham radio.

No I'm not. I'm a participant, a license radio amateur. I have been
for decades.

> YOU are NOT an official in the FCC, federal government, or even
> that pseudo-governmental organization called ARRL.

No, and I don't need to be employed by the FCC. The ARRL is not a
pseudo-governmental organization. I am a life member of the ARRL and
have been for over 25 years. With small lapses prior to my life
membership, I've been a League member for nearly four decades.

> YOU have NO authority to call anyone anything, demean them,
> make fun of them, or anything else...yet YOU continue to do so.

> That indicates the perversity of your control-freak psychosis.

It is clear that I have as much "authority" to do those things as you.
You do them frequently. Are you a control freak?

> I've been a professional in radio-electronics since 1952...51 years.

Bully for you. This group doesn't have anything to do with being a
professional in radio or electronics.

> I've also been a radio-electronics HOBBYIST since 1947. Hobby
> activities not for pecuniary interest are AMATEUR activites.

Part of your radio amateur fantasy? You can claim all the hobbyist
time-in-grade you like. Those might be AMATEUR but that doesn't make
you a radio amateur.

> If they
> involved making money at it they would be professional activities.

Maybe you'd like to tell us about your Citizens Band activities having
to do with the fact that you are a citizen and that you once played in a
band.

> YOU keep insisting one MUST be "licensed" to be an AMATEUR.

YOU keep getting it wrong. For you to be a radio amateur, you must pass
a license exam. You haven't.

> YOU keep holding up having a license grant is somehow making
> YOU "better" than anyone not having an amateur license.

No, YOU keep interpreting my words in that manner. Passing a license
exam makes you a radio amateur, a part of ham radio. You haven't passed
such an exam and are not a part of amateur radio.

> YOU seem to think that amateur radio is some event of epiphany, of glory
> and greatness in radio, some kind of nebulous "service" to the
> nation, transcending anything done in any other radio service.

That is incorrect. It doesn't matter what you've done in any other
radio service. If you want to participate in amateur radio, you'll pass
a license exam. You haven't done so.

> Feel free to indulge in your fantasy. Just remember that your output
> of constant personal attack of others not accepting your views makes
> YOU the perverse individual here.

You're a million laughs, Leonard old chap (or chapped). You're the king
of personal attacks and the grand poobah of rejected views. To top it
all off, you aren't involved in amateur radio whatsoever.

> I'm just arguing against a morse code test for any US radio license
> but there is this constant barrage of Personal Attack filth from the
> fantasyland control freaks diverting everyone from the subjects to

> the usual flame fest flings that must make your warped mind happy.

Filth? You must have come across some of Roger Wiseman's material.
You've never "just argued" nor have you limited your agenda to removal
of the morse test.

> So far, you haven't "won" anything. Why do you keep on with the
> same old flame trash?

I thought you were supposed to be eating me for breakfast. Aren't you a
little touchy for one who uses those who disagree with him as
playthings? Floyd must have gotten it wrong.

>> radio folks becoming hams when they got out ...
>
>There has never been a correlation made between the growth of ham
>radio and new batches of war vets.

It should be noted that the number of US hams grew from about 60,000 on VJ Day to almost 100,000 in 1951, when the restructuring that gave us the "name" classes (including Novice) took place. Some of that was obviously returning vets, some was "pent up demand", etc.

btw, FCC continued to conduct ham exams and issue amateur operator licenses during WW2. They simply suspended all station licenses. So there were plenty of hams but no ham stations for them to operate legally. This was a big improvement over WW1, when all licenses were revoked, equipment had to be dismantled and sealed, and even antennas had to be lowered to the ground and removed.

>The far more likely reasons were
>the overall increase in the standard of living and more personal
>leisure time aided and abetted by a heightened awareness of radio
>comms and technology in general after those wars.

All big factors. Something as simple as a VA or FHA mortgage and a bunch of Liberty bonds made a big difference.

>And to a lesser
>extent the availability of surplus mil-spec hardware for cents per
>pound was a boon to growth.

Sure. Plus wartime manufacturing advances meant that prices on both parts and manufactured gear went down compared to inflation.

>More younger people joined the hobby for
>all these reasons plus the availability of the then-new Novice license
>was a big shot in the arm for growth. "I wuz one" . . .

The Novice had the effect of drastically reducing the age of the average newcomer. Some folks back then were not happy about that.

>
>> The boom in the 60's was probably due to the emergence of economical
>> JA radios,
>
There was no boom in the '60s. JA radios did not really appear until the mid
'70s.

>That growth occurred when brands like (bloody expensive!) Drake,
>Collins, Hammarlund, Heath, B&W and the rest were the only games in

>of the HF riceboxes in the '70s did just that for the existing
>population of hams. I've never known of an example of anybody getting
>into ham radio simply because the newer HF equipment provided more
>bang for the buck.

Actually, what really has a big effect is the perceived cost to get started. In
the bad old days most hams started out with a receiver and simple wire antenna,
costing whatever they could afford. For many it was a $10 Command set or $25
used SWL rx or homebrew. Once the license was earned, a simple tx and TR system
was added. Not state of the art even for the times but a lot of fun was had and
the expenditures were modest and spread out in time. Most of all, beginners had
lots of examples of simple inexpensive first stations. And there was a long
road of improvements possible, all spread out in time.

Today the "paradigm" seems to be a new transceiver, manufactured antenna, etc.,
all at considerable cost up-front before even any listening is done.
>

>get out of that one?

I dunno that we even got that much in the way of numbers. Sure, a lot of hams
started out as post-1991 Techs, and we've grown considerably since then. But
look at the '80s growth, and the '70s growth....

>> and/or with your own code and synthesized into your own IC ...

Let's see,

What I'm hearing is that it's "reasonable" to expect hams who are not
electrical engineering professionals to

do a "conceptual design, code it in VHDL, simulate it, synthesize it into a file that is used to
program the IC" and then integrate it. We can also expect them to use "lots and lots of
free "cores"out there for all sorts of things ... SPI interfaces, microcontrollers,
FEC, and on and on and on ... all things that can be "hooked up" together
and/or with your own code and synthesized into your own IC"s. And then put it all together into
a functioning, useful RADIO - on their own time and with their own money and tools.

But it is not "reasonable" to expect them to learn enough Morse code to pass Element 1. OK, fine.
>
>And when it's all said and done the average ham won't learn or know
>any more than he/she needs to pass the tests and/or to get on the air

Actually I think a "21st century Novice" license isn't such a bad idea. The problem is on the other end of the scale.

>> Folks just need to think in new paradigms ... unfortunately, that does not
>> seem to be the strong suit of many present hams.

Another "bell the cat" problem. Which new paradigms? The real problems most hams, particularly new ones, face are
things like CC&Rs, and RFI.
>
>I heard exactly that same lament in the 1950s and it was just as true
>then as it now. What conclusions do you draw from that as it relates
>to the health, welfare and growth of ham radio?

What matters is not how many hams there are but how many active hams there are. The FCC database sez 687,000 or so in the USA alone. What do you think the bands would sound like if even 10% of them were on the air at once?

In the case of 40, it's to avoid BCI.

On the other bands, I think a lot of DX ops don't even know how far down
US hams can go on phone (although the serious DXers do).

BTW, I just received the parts for my K5OOR linear. We're supposed to call it a project instead of a kit, HI. Anyway, when I've built it, it will amplify the output of my FT817 to 35 watts on 160-10. It will be pretty small too, i.e. the FT817 plus the linear will still be much smaller and lighter than the IC729.

That puzzles me. I honestly don't think it's due to new hams preferring
CW. Maybe there are people who used to only contest on phone that are now
doing the CW leg as well.

>>

NEWS

HAMS' HIGH TENSION OVER POWERLINE - 12 August 2003
Richard Chirgwin

Stray Signals Spoil Spectrum

Amateur radio operators in America have conducted tests which they say demonstrate unacceptable radio interference caused by powerline broadband systems.

The ham radio operators conducted tests in four US states where powerline is in pilots, and the results of those tests were presented at the group's Austin Summerfest earlier this month.

The tests demonstrated that powerline broadband systems using frequencies between 2Mbps and 80Mbps created wide-spectrum interference on HF and low-VHF amateur radio allocations.

The test was conducted by the laboratory manager of America's ARRL (the American Radio Relay League), Ed Hare, who tested spectrum measurements in Maryland, Virginia, Pennsylvania and New York. He is quoted in the ARRL's online publication as saying that interference "ranged from moderate to extremely strong". In some tests, powerline interference was propagating for miles.

The tests found three types of interference: static, pulse noise, and "warbling". The interference was detectable both from overhead and from underground cabling.

The ARRL had already filed technical exhibits to an FCC powerline inquiry, and says it will file further comments this month.

The ARRL article can be found here.{ Http://arrl.org/ }
CommsWorld Comment:

The first trials of powerline technology during the 1990s were killed off by interference, and by overhyped vendor claims. When powerline started to make its comeback, the vendor community put its hand on its collective heart and promised that interference was solved.

If the ARRL's tests are right " which is a reasonable assumption given the demanding nature of a ham radio license " then powerline vendors were mistaken about interference.

This is hardly surprising. The physical parameters of an electricity distribution network vary much more widely than anything you'll see in a laboratory. It's quite likely that the interference seen in lab tests was small enough to convince the industry the technology works. But out in the field, there's plenty of things to fool around with the line impedance.

This could have been foreseen. If the powerline vendors were wrong about interference, can we trust their claims about speed, performance, and cost?

It's easy to trivialise the concerns of the ham operators and that is exactly the tack utilities are taking in America. But ham operators aren't ignorant; and they're not without rights. In all countries, ham is licensed and that means the operator has paid a fee for the right to use spectrum.

Any normal, healthy male would be interested in Michelle, Kim. Sorry, I know you're not personally familiar with that concept from your own experience. In fact, you had to come up with your "...one step closer to extinction" Vanity call sign, just to stir up some interest. Too bad it's the wrong kind!

Jim:

Just looked up the birthdates for Kim, Michelle, and Fred. Kim's is in 1955, making her 48 years old, Michelle's is in 0010, making her 1,993 years old, and Fred's is in 1935, making him 68. I must say, Michelle is very well preserved for a little old lady! However, I guess she's a bit too old for me now!

Well, Lennie, I learned the truth the hard way. I'm not a 5'2" red head
with a sexy figure, a sweet-as-honey Southern twang in my voice, and
a tight little butt. Then again, she's collecting dust in that cubicle all
day,
and I'm out enjoying a paid ride in the countryside, enjoying my tunes
on the stereo, helping out people who need my help to be able to live
relatively normal lives. I decided a while ago that if my company has
some other job for me to do, it had better be something I can do from
behind the wheel of my bus! So go ahead, keep up the whining about
my alleged claims of what I was going to do after graduation. That's
about all you're good for around here!

Oh MY but aren't you a military wonderful all through AMATEUR
RADIO!

Tsk, tsk, tsk, most of us in my Fort Monmouth Signal School
classes were NOT radio amateurs. Few were professionals. WE
couldn't use morsemanship skills to advance in radar or microwave
radio relay MOS training. Of course that was in 1952 when all
US radio amateurs were very knowledgeable about radar and multi-
channel radio relay, right? :-)

Once out of Signal School and assigned to a unit, most of us had
to do professional level work like keeping all those multi-channel
radio relay systems up and running 24/7. Of course, YOU don't
recognize "24/7" as anything at all, do you? [you haven't done so
before, why hope you might?]

In my case, I had to learn, on the job, all about high power HF
transmitters and keeping the primary communications circuits
across the Pacific up and running for 24/7 for a year and a half.
No problem. Made E-5, NCO and not the Specialist, in a year and
a half, waiting around for the microwave radio relay equipment to
finally arrive. Morsemanship skills didn't matter one whit. Neither
were there any points for DX contesting or reading QST ads cover to
cover.

>Do you know
>when the U.S. might need trained operators or when another draft will be
>instituted?

You mean REinstituted. The military draft (conscription) ended way
back in 1973. That's THIRTY YEARS AGO.

The ENTIRE US military is VOLUNTEER. For 30 years.

I've seen enough examples of the all-volunteer US military to know they
are bright, go-getting military professionals who know what to do with
professional equipment.

Once the all-volunteer military is assigned a task they DO it, and DO
IT professionally and they WIN their objectives. See Panama, see
Grenada, see fun in the skies over Libya, see the First Gulf War, see
Afghanistan, see the Second Gulf War. It was Whupass time and
the "other side' got whupped.

The US military has an excellent schooling system for electronics and
radio, NOT needing some ham skilled hobbyist "training" in working
DX for contest points or having fine picnics-with-radios called "Field Day."
The US Army can DO field communications anytime and for months.

>Are you miffed because you don't have any war stories relating to code?

Hell NO. None of us at station ADA had to know any morse code or use it for primary communications trans-Pacific a half century ago. Morsemanship was NOT a useful skill back then and it isn't a useful still in radio NOW.

Too many of you mighty macho morsemen are living in a fantasyland like the fake "colonel" in here five (six?) years ago trying to make us believe his "son was behind enemy lines in Iraq sending intel back via CW" during the First Gulf War. Fantasy bullshit then, still is.

>Do you know anything about the operating skills of any contest types?

I could care less.

The US military is trained to WIN. It DOES that. AMATEURISM in military radio is for off-duty fun and games with special services, not special forces.

>> Morse code use will keep out the eveavsdropers and bad people from

>It is a cinch that you don't have first hand knowledge of anything to do
>with morse code. Whoever told you was wrong. <shrug> :-)

It's a cast-iron cinch that all you have is some more fantasies of greatness in radio while at third-world embassies in Africa.

Show us all your greatness with experiences with SHARES and ALE, not the drink. We've seen the results of drinking from others. Sober up.

You are wasting everyone's time in here.

>>
>> :-)
>
>You've told us about morse landline telegraphy. Did you LIVE THOSE
>TIMES? Do you KNOW? Maybe you read it in a BOOK or saw an article on
>the WEB. :-)

Irrelevant. No one in here lived in 1844 when morse code was first used
in commercial landline communications.

No one in here lived when Marconi did his first radio communications in
Switzerland in 1895, or proved in Italy in 1896...using morse code for
on-off keying of a spark transmitter.

No one in here lived when the Titanic went down and mighty morse code
managed to get through for rescuing some...morse code could get
through because there was NOTHING ELSE to compare it with.

Try reading a BOOK on the REST of the world of radio instead of what
if spoon-fed you by the little publisher in Newington. You might find out
that the REST OF THE RADIO WORLD has gone beyond amateurism.

There is NO need in the rest of the radio world for DX contesting or
morsemanship skills or collecting QSL cards.

>> >The boom in the 60's was probably due to the emergence of economical
>> >JA radios, a general increase in the interest in electronics, and later,
the
>> >emergence of VHF/UHF FM and repeaters ...
>
>Incorrect. There was no boom of JA radios in the 1960's.

Of course not. Hallicrafters, National Radio, RME, Collins were all
having terrific sales, snowing the amateur market with ham gear.

Right. Sure. Where are they now?

Collins quit the ham market long ago. Hallicrafters folded or something
even longer ago. National Radio went for the military electronics stuff
quitting ham radio sales. Even Heathkit went belly-up.

Are you in some kind of dream world where you think Yaesu, Icom,
Kenwood, and JRC are "American" companies?!?!?

>> It's difficult for even old-timers to understand a postwar boom period
and
>> the Cold War getting hotter when they've just reached First Grade. :-)
>
>I don't know about when you were in school, Len. They provided us
>history books. Most of us figured out that there was additional
>historical material available. :-) :-)

Paper, moveable type, and the printing press were all invented LONG
before 1844 and the first use of commercial morse code
communications.

I was a working radio professional in 1952 when the Cold War was
already started. Are you saying your holiness as a school boy has
MORE experience in Cold War life?!?!?

>> The holier-than-thou old-timers insist on the "no-coders" to do all
>> the technical advancements in amateur radio. Never mind that they
>> weren't able to do much in a half century. :-)
>
>What's it to you?

Stuff it, Colonel Klunk.

>You aren't involved. If you're to make any technical
>advancements in amateur radio, you'd better get cracking.

Stuff it twice. YOU are NOT a judge. You are NOT an official who can
"run" the US amateur radio community. You are NOT in government
anymore and were NEVER a radio regulator at the FCC.

I've had a successful career in PROFESSIONAL radio-electronics and
still enjoy that in retirement. Radio-electronics has been a fun hobby
for me for a longer time.

Now tell us, great big four-decade experienced AMATEUR radio god,
what have YOU ever done to "advance amateur radio?!?"

Show us your patents, your marvelous discoveries, all your important
technical contributions. You've had FORTY YEARS of amateurism
and all you can come up with is trying to put down folks in an amateur
newsgroup?!?

>In this game, you aren't nobility and you aren't a peasant. You're an
>onlooker.

That's all you are, big radio god of the AMATEUR bands.

A hot-air balloon who plays with ready-built radios and talks tuff as a
newsgroupie.

Get a better life.

Ahem. Four. Include error rate. :-)

Claude Shannon used teleprinters as a working example in his 1947
landmark paper.

That made it more familiar to communications people in the REST of
the communications world. Not many radio amateurs knew how
teleprinters worked or how they were coded in 1947. :-)

"Shannon's Laws" apply to EVERY communications medium, wired or
wireless. According to a few ignorant extras the "don't apply" to amateur
radio. :-)

Heh, it's hard enough to get amateurs to use the proper multiplier
prefix on frequencies, let alone grasp a concept of noise power per
unit bandwidth. :-)

That's a *very* hollow laugh, Carl. Efficiency goes way beyond
anything Shannon ever described.
You should know that. The word applies to far more than just what goes on
within any single "channel". But you choose to ignore every bit of it
save what Shannon had to say.
I find that very revealing- An Information Theory fixation!

I just realized---You're a Shannonist!!!!

Yup. It is very efficient, just uses operator skill in place of unneeded
technology. One can put a min- imal but very effective CW station the
air with little problem.

Lets see now, what was that you had in mind for new hams -the ones who
just passed a memorize-it 30- question written, sans learning--
you said...

>>Building a radio will involve components ... some may be "store-bought"
>>ICs, others will be R/L/C, perhaps some discrete transistors, etc. ... BUT
>>there is no reason that reasonably technically-inclined, intelligent hams
>>cannot

From: Phil <nomail@noway.com>
Message-ID: <3qqgjvovs53fgqvvde31qn9gigvs6r9lob@4ax.com>
Source record: 74552

Len,

Steve's point regarding older equipment does have considerable merit - modern equipment was not designed to be tinkered with or repaired by anyone without very complex equipment at their disposal. The tube era (and transistorised solid state) equipment could easily be adapted and experimented with by a reasonably skilled operator. In fact, I recall that the initial intent of ham radio was to encourage people to develop technical expertise in the radio art (I asked one ham to switch his Icom rig to USB on 40 meters, so that I could check whether I my audio roblem was limited to LSB - after around 5 minutes, he confessed that he could not figure out how to do it! - so much for technical skills...) As such, I don't see how this goal is being accomplished by the current generation of 'set the dial and talk' equipment. As such, I'd suggest that your observations regarding Steve's position on current equipment is flawed. I certainly don't care if the radio glows in the dark - but it would be refreshing to meet more people who can apply basic radio theory to a simple QSO!

Steve, you are absolutely correct - idiots are idiots, on or off the air. Or the internet, apparently.

>I think that was the upper fifth percentile, IIRC. Get it right.

The only "fifth" you are in is a booze bottle...dreaming fantasies
of glory and greatness of self and then writing epic stories of
your accomplishments in amateurism.

Maybe it isn't booze. Maybe it is monoxide poisoning from being
stuck in mental gridlock too long.

>> I would classify you as little more than an ego-driven salesman type

I do. It's called the First Amendment of the United States
Constitution.

Ever hear of it?

The First Amendment doesn't give special dispensation to long-time
licensed radio amateurs.

Talking down to folks is not what this newsgroup is about...but you
keep trying to play radio god.

Poor baby. Big hero "I was in 'Nam" radio god can't stand ordinary
fire fights...cries and carries on when he is subjected to return fire.

Quit acting like an Oberst in the Amatur SchutzStaffel (A.S.S.) and maybe all could discuss SUBJECTS instead of personalities.

I do not "dream" of having a radio license.

I got one of those 47 years ago.

>> YOUR fantasy seems to be stuck in the rut that whatever YOU like
>> "defines" what ALL other radio amateurs do, think, and must act
>> like in some rigid set of rules of YOUR imagination.
>
>Not all all, Len old boy. I realize that others have different fields
>of interest within amateur radio and they might have different levels of
>interest in the game. You however, aren't a part of amateur radio.

I'm not interested in either getting or dreaming about any AMATEUR
license.

My interest is eliminating the morse code test for any radio license
in the USA.

>> YOU are NOT an authority or an official anything in US ham radio.
>
>No I'm not. I'm a participant, a license radio amateur. I have been
>for decades.

Whoopee. Do we crown you emperor or something?

Maybe your nobility will get you a job at the FCC where you can
"rule" over amateur radio.

How about at ARRL? All those years of AMATEUR experience ought
to put you in the Executive President position...right behind another
Dave now holding Executive President For Life. <shrug>

>> YOU are NOT an official in the FCC, federal government, or even
>> that pseudo-governmental organization called ARRL.
>
>No, and I don't need to be employed by the FCC.

Oh, my, assuming the mantle of leadership without authorization?!?

>The ARRL is not a pseudo-governmental organization.

Tsk, tsk, tsk...then they've been deceiving everyone with all their
"district directors elected by democratic action" and all that!

>I am a life member of the ARRL and
>have been for over 25 years. With small lapses prior to my life
>membership, I've been a League member for nearly four decades.

Wonderful. I'm only a life member of the human race and a citizen
of the United States of America.

Nothing can compare to "life membership" in ARRL!

>> YOU have NO authority to call anyone anything, demean them,
>> make fun of them, or anything else...yet YOU continue to do so.

I'm just trying to discuss SUBJECTS, not personalities.

You keep on endlessly attempting to put down and humilate anyone
who won't agree with you.

Then you get all bent out of shape whenever someone doesn't bow
down to your majestic whatever and continue with the put-down and
humiliation attempts.

>> I've been a professional in radio-electronics since 1952...51 years.
>
>Bully for you. This group doesn't have anything to do with being a
>professional in radio or electronics.

Well then, you just have me LOCKED OUT of the newsgroup, why
don't you?

Make this newsgroup some kind of "ARRL South" and all you
morsemen can sit around giving each other high-fives and claiming
greatness in the very closed, closeted elite area of your own making.
The rest of the world won't care much since the professionals in radio
are busy keeping world communications going around the clock.

"If thine eye offend thee, put it out."

>> I've also been a radio-electronics HOBBYIST since 1947. Hobby
>> activities not for pecuniary interest are AMATEUR activites.
>
>Part of your radio amateur fantasy? You can claim all the hobbyist
>time-in-grade you like. Those might be AMATEUR but that doesn't make
>you a radio amateur.

Sigh...the credentialist is stuck on a one-note theme.

You've carried your radio god personna so long you've gotten to believe
that the only radio is amateur radio.

>> If they
>> involved making money at it they would be professional activities.
>
>Maybe you'd like to tell us about your Citizens Band activities having
>to do with the fact that you are a citizen and that you once played in a
>band.

You are in a delerium again. It's an old model and doesn't work well.
Put it out of its misery.

Bad try at some misdirection into more personality plonking. It doesn't
work.

>> YOU keep insisting one MUST be "licensed" to be an AMATEUR.
>
>YOU keep getting it wrong. For you to be a radio amateur, you must pass
>a license exam. You haven't.

Let's see...according to Heilian definitions, only LICENSED radio
amateurs are AMATEURS. That would make every other radio hobbyist
"professional?" Not so. Your Beeperitis has led you off on another
merry morse chase of illogic.

>> YOU keep holding up having a license grant is somehow making
>> YOU "better" than anyone not having an amateur license.
>
>No, YOU keep interpreting my words in that manner.

There's no need for "interpreters." What you keep harping about is just
the same old judge-jury-executioner bullshit you've always used.

It doesn't work. Fix it. Remember, you are the self-styled Radio God.

>Passing a license
>exam makes you a radio amateur, a part of ham radio. You haven't passed
>such an exam and are not a part of amateur radio.

I'm not interested in "becoming part of amateur radio."

You don't seem to understand the concept. [Radio gods are like that]

I'm just trying to get the morse code test off of all US radio license examinations.

Maybe you ought to review the FCC rules and regulations regarding Internet access. You cannot issue any "NAL" for someone objecting to your self-proclaimed "authority" or "judgement" over who can and who cannot post in newsgroups.

>> YOU seem to think that amateur radio is some event of epiphany, of glory
>> and greatness in radio, some kind of nebulous "service" to the
>> nation, transcending anything done in any other radio service.
>
>That is incorrect. It doesn't matter what you've done in any other
>radio service. If you want to participate in amateur radio, you'll pass
>a license exam. You haven't done so.

You are stuck on this topic, aren't you Kolonel Klunk?

Best you get very busy and ENFORCE the newsgroup then, ONLY permitting licensed radio amateurs from communicating anything in here.

Your vigilante "enforcement" hasn't been working...yet you keep whining and carrying on, using the same old tired arguments.

>You're a million laughs, Leonard old chap (or chapped). You're the king
>of personal attacks and the grand poobah of rejected views. To top it
>all off, you aren't involved in amateur radio whatsoever.

Poor baby. Still thinking the First Amendment only applies to licensed radio amateurs?

>I thought you were supposed to be eating me for breakfast.

???

I'm not "supposed" to be anything you say I am...you are not only disagreeable but indigestible.

Go back to your fantasies of greatness in radio and your authorized judgement of all who disagree with your holiness' views.

You are wasting everyone's time.

LHA

>This newsgroup is about AMATEUR Radio. The experience that Dick and I
>have with CW, PSK-31, and other modes "common" to AMATEUR Radio
>is certainly not a "restriction," and is, indeed, a "yard stick" by which we

You need a micrometer, not a yard stick Larry. That's a very
small area of exposure.

>The more you take this discussion out of the context of AMATEUR radio,
>the more irrelevant you make yourself. If you have professional-grade

The more we put it in the context of reality, and remove it from the
small sand box you play in, the more appropriate it becomes as a way
to measure the ARS as a whole.

>technical qualifications, I think that's great. However, I don't -- and very
>few AMATEUR radio operators do. What we do have is curiosity, and a
>willingness to learn. We also have the operating authority to experiment with
>modes such as PSK-31 and adapt them to effective communications in keeping
>with the rules, regulations, and purpose of the AMATEUR Radio Service.

If hams and the ARS were where all the innovations in radio and
communications come from, your point would be valid. But
exactly the opposite is true, and what actually happens is that
hams and the ARS pick up innovations, mostly from the *many*
hams that do work in the industry.

A perfect example of what happens when the rest of the world is
closed off per your specifications is this entire concept that
CW is still somehow a vital and useful mode of radio operation.
Despite all of your blathering, it is not vital and it is useful
virtually *only* as a hobby pastime for ham operators to enjoy
if they wish.

>I won't presume to speak for Dick, but I consider myself to be a typical,
>average AMATEUR radio operator who has pursued the art and science

Look Larry the Liar, you can't have it both ways. You've claimed
that *everyone* should learn CW, because you were forced to and then
you ended up enjoying it; you've claimed that your written exam
was more difficult than those given today; you've claimed that your
experience puts you in the top 5% of all hams.

>of AMATEUR radio communications at a level which is considerably
>above that of other hams who, for whatever reasons (excuses), fail to
>pursue modes beyond those involving voice communications. Now, to

So you *aren't*, by your measure, "a typical, average AMATEUR radio
operator". So stop trying obfuscate your claims of being the
Great Stick To Measure All of Hamdom By.

>be fair, I don't include among that group those who tend to specialize in
>more technical aspects of the hobby such as building and maintaining
>repeater systems.

Yeah, they don't count... they do something you don't.

>I've known a lot of hams who do this, but are No-Code
>Techs who don't have any interest in CW, or anything else on HF, for

And that is what you like, so that is where the Stick Dips. Hmmmm...

Larry, the Calibrated Dip Stick for all of the Amateur Radio Service.

>that matter. I value their contribution and consider them to be full-fledged
>radio amateurs.

Garsh, I bet everyone of them is just *so* glad to hear about that.

>However, they represent a very tiny minority of the
>overall ham radio population, and an even smaller minority of No-Code
>Techs.

You constitute the *tiniest possible* minority of the overall
ham radio population: One Dip Stick.

>They are even further diluted when you consider the fact that a
>lot of the technical/repeater gurus are also CW-tested, CW-using, CW-
>loving, and Morse code test supporting Pre-Restructuring Extra class
>licensees.

So you've just demonstrated that CW doesn't have much to do with
the highly technical aspects of the ARS.

>>DICK and Larry have dabbled at 2, 3, maybe 4 different kinds of
>>digital communications systems. Thrilling. Whether I or
>
>Yup. "Dabbled" is just about what I'd call it myself. However, my
>"dabbling" represents a level of technical involvement which I would
>dare say places me in the top 5th percentile of just Extra-class hams,

>not including all other license classes. Therefore, I consider myself
>to be more than qualified to judge other hams on this basis.

That's an exceptionally rude insult to all Amateur Radio
operators. You appear to me to be probably at about the 25%,
where 3 out of 4 Extra Class hams have a broader base of
experience. (Note that that *is* rather complimentary for
someone who is not a professional. Now if only your ego matched
your experience, you'd be a valuable ham instead of an
embarrassment.)

>level of technical involvement among radio amateurs. Legitimate
>"pros" like Len, Carl, and yourself do add considerable value to the
>ARS as a whole, but you cannot in any sense of fairness use yourselves
>as any kind of objective "yardstick" by which other hams are measured.

And we *aren't*. That's the point. We don't think *you* should
either.

>>In fact *your* argument is the same bogus one that DICK and
>>Larry make! Because *they* use CW (or PSK-31), everyone else
>>either does, or is declared too dumb to license (or understand
>>how Shannon applies to PSK-31). That is invalid logic and leads
>>you to erroneous conclusions.
>
>Fallacy. You are making apples-to-oranges comparisons, which is a
>well known Usenet tactic, but one which always ultimately ends up
>disqualifying the person using it.

You just did the exact same thing up above using repeaters instead
of CW or PSK-31. I'm not comparing apples-to-oranges Larry, I'm
just tossing one bad apple out of a barrel of apples.

>>>The truth of the matter is that under some
>>>conditions PSK-31 outperforms OOK
>>>Morse CW, and under some conditions

>>
>>And that tells us *nothing* about which is the more efficient or
>>effective mode of communications.
>
>No, it doesn't. That would depend on a universally accepted
>definition of the terms "efficient" and "effective" in the context
>of the use of these modes within the ARS. To the extent that the
>meaning of these terms are infinitely arguable, only those of us
>with fairly extensive operating experience in each can even come
>close to being qualified to render an objective opinion.

Actually, the definition of "efficient" isn't much in debate.
It's a simple measure of the percentage of the channel capacity
attained. "Effective" is as you say, open to debate. In the ARS
"effective" can mean does it make Larry Roll puff up with pride

after a half and hour CW session, or does it take him 4 hours...

>Dick's claims are not "bogus" in any way, since they are based on

Dick's claims are simply ludicrous. He is spouting absolute
nonsense. Everything he says is right up there with your concept
of Empirical Theory.

>BTW, I do believe that Mr. Shannon's theory is relevant to Amateur
>Radio. I believe that what Dick is doing is making observations
>based on actual operating experience, rather than empirical theory.
>This may be the cause of the confusion, but as I said earlier, I do
>not presume to speak for Dick.

That paragraph sums it up just so perfectly that you can't imagine
what you've said!

No. Dick has repeatedly stated that Shannon has no significance
for hams. He is wrong. He has said that his observations prove
that CW is more efficient than PSK-31, and he is wrong about it
being proven by his observations.

What? You think that is a perjorative???? You, sir, are
no *real* hockey puck!

Heh, years ago I can remember going to a hockey game in
Fairbanks, when the house was full, with hardly a seat left.
Not a big deal, except that there were *four* hockey games going
that night, and *all* of them were playing to a full house.
Something like 1/4 the population of Fairbanks was taking in a
hockey game that night.

DICK, you are not discussing the efficiency of a mode. What you
are arguing is the *operator's* ability to effectively use a mode.

Yet you insist that you are proving something about the mode itself,
rather than the operator and his equipment.

If the operator is effectively utilizing the mode he has chosen,
the bandwidth requirement of the mode is closely matched to the
channel the operator provides.

You are saying that your ineffective use of one mode compared to
your more effective use of another mode proves that it was the
mode that was more effective. All you've done is demonstrate
that you don't understand the effective use of radio
communications, the theory behind efficient use of the modes
involved, or what you have observed.

>>Increasing the signal power has the desired effect. There are

>radio.
>When a ham is working another station he has no control over the power that
>station is injecting into the channel. What he can control is the
>bandwidth,within limits of course.

DICK, the operator can do any number of things. We should
assume that just for starters the receive operator is correctly
adjusting the bandwidth of the channel to match the bandwidth
being transmitted.

There are *many* other things that can be controlled to change
the effective use of a communications channel. Your suggestion
reduces the channel capacity rather than making it more
effective.

If you want more *effective* communications, either increase the
data rate within the existing channel, or if it is already being
used as best that a given mode can provide, increasing the
channel capacity to either 1) allow a higher data rate or 2)
reduce the error rate.

To increase the channel capacity an operator has several
choices. Asking the distant end to increase power is one
possible solution. Another is to use, or adjust, an antenna to
provide an increase SNR, whether by reducing noise or by
increasing the signal, or both.

>Within ham radio such situations vary widely, but for CW the sitiation
>is pretty well
>straightforward. Hams almost always enhance CW signals by reducing the
>bandwidth
>which raises the SNR.

Only if it was misadjusted to begin with. You aren't making a case
for CW, you're making a case that you are a poor operator.

Wrong. It is not a requirement, unless you want to compare
modes the way you were trying to do. Then it becomes *the*
issue.

It should also be noted that though understanding communications
theory is not a "requirement", in that one can and many do enjoy
ham radio without knowing much about it, I do believe that
almost everyone except you will agree that the enjoyment is
dramatically increased by the degree that one does understand
Shannon's work. After all... it does *define* what it is we do:
communications.

>You see, Frosty, we NEVER need to do things like the military and some

>>entire direction of communications technology switched gears
>>immediately after Shannon published his works.
>
>You're a lightweifgh here t, Frosty, a number of the REAL learned from
>academia have stated otherwise.

Put up or shut up, DICK. Lets see you quote a couple cases
where anyone has ever said any such thing.

Here is what academia actually has said:

In 1985 Shannon and his wife decided on a whim to visit the
IEEE International Information Theory Symposium being held
in Brighton, England. ... Recalls Robert J. McEliece of the
California Institute of Technology, "It was as if Newton had
showed up at a physics conference."
http://www.ecs.umass.edu/ece/hill/ece221.dir/shannon.html

"... the man who, as a young engineer at Bell
Laboratories in 1948, wrote the Magna Carta of the
information age: "The Mathematical Theory of
Communications"? Whose work Robert W. Lucky, executive
director of research at AT&T Bell Laboratories, calls the
greatest "in the annals of technological thought?" Whose
"pioneering insight" IBM Fellow Rolf W. Landauer equates
with Einstein's"
http://www.ecs.umass.edu/ece/hill/ece221.dir/shannon.html

[Warning: context was removed from the above quote for
brevity, and it is *really* worth seeing the entire statement.]

"Noted as a founder of information theory, Claude Shannon
combined mathematical theories with engineering principles
to set the stage for the development of the digital
computer."
http://www.thocp.net/biographies/shannon_claude.htm

"Shannon's information theories eventually saw application
in a number of disciplines in which language is a factor,
including linguistics, phonetics, psychology and
cryptography, which was an early love of Shannon's. His
theories also became a cornerstone of the developing field
of artificial intelligence"
http://www.thocp.net/biographies/shannon_claude.htm

"It is generally accepted that the modern discipline of
information theory began with the publication by Claude
E. Shannon of his article "The Mathematical Theory of
Communication" in the Bell System Technical Journal in July
and October of 1948."
http://www.wikipedia.org/wiki/Information_theory

"Shannon had written "a blueprint for the digital age," says
MIT information theorist Robert Gallager, who is still awed
by the 1948 paper."
http://www.kjist.ac.kr/~slic/est/cshannon.pdf

And of course one could go on and on and on, because you can't find
a reference to Shannon that does not include some similar statement.
The work he did has just had a awesome effect on how we live today.

And of course it has greatly *more* effect on ham operators than it
does for the average person!

Don't bother Frostbite, I already know how to use Shannon. I have a pretty large book here some containing about 1300 page that does a pretty good job on Shannon It's entitled "Electronics Engineers Handbook" and devotes a few pages tothe subjectt, and I've read it.

But I also know enough about ham radio to know how it DOESN'T apply, too.

>

Here we go again Frosty! So how do you propose to raise the power in the channel when a ham is communicating with a distant ham radio station who is running all the power he has availalble? Magic perhaps?

Sort of look like we're left to improve things on the receive end how ever we can arrange to do it, doesn't it? Or is all this outside your ham radio experience?

>
> > AH, we finally arrive at the core issue! The VERY reason I say that

>

Where did I ever say anything in opposition to any of that? I didn't! I merely said
you Shannonists incorrectly insist that we ALL apply Shannon's theories to each and every
situation within ham radio,and it simply doesn't work! All it does is to satisfy
some inner urge within you and Carl etc to do your thing instead of do ham radio.
Kind of like you have this bad itch you just HAVE to scratch!

All very neat, Floyd. It IS very impressive, and in no way have I ever said,
done nor indicated anything that should detract from his work. It was brilliant, without
doubt. One of those things that should be obvious but which requires
a flash of uncommon insight.

Experienced hams understand what he was talking about, and how everyday
ham radio digital communications functions. But it WON'T, CAN'T cause
the "most efficient" mode to function best in cases such as the one I was in when I could
copy the CW Id but not the PSK. And such"comparisons" ring hollow
at those times. The same power levels in use, in a single ham radio channel, but the least
efficient mode performed while the most efficient one didn't. And yes, I understand why as
well as you do.

>And of course it has greatly *more* effect on ham operators than it
>does for the average person!

Maybe you should actually get on the air sometime and find out for yourself,
instead of having to take some other person's word for it all.

Wrong, Floyd. We can appreciate what Shannon did without considering him a
God. And that's exactly what you and Carl have done.

That's probably why Dick is so anti-Shannon and continually
denies that Shannon's work has anything to do with ham radio ...
Dick is scared to death that modern digital communications
(that he obviously isn't capable of comprehending) will ultimately
supplant his beloved Morse ... which appears to be the only thing
in ham radio at which he can claim true proficiency.

Simple version: Dick can't face the fact that his only "claim to
fame" (as in "a legend in his own mind") is irrelevant except as
a recreational activity.

(NOTE: I have no problem with folks pursuing Morse as a
recreational activity ... what I have a problem with is their
insistence that it's "essential" to be a "Real Ham" and that a
pass/fail proficiency test should forever remain a "gatekeeper"
to the HF bands.

> I'm just trying to get the morse code test off of all US radio license
> examinations.

Since there are only two that require it, and both of THEM are
Amateur Radio licenses, and since YOU insist you don't want to be a
"part" of Amateur Radio, that confirms my hypothesis that you are only
a troll and antagonist.

Thanks for the proof.

> You are stuck on this topic, aren't you Kolonel Klunk?

Hmmmmmm.....What was Lennie the Lame saying just a few paragraphs
ago about only wanting to discuss "subjects" and not "plonking"
personalities?

Does this complete and total idiot not proffread his own stuff to
make sure he doesn't double-back and step on his own toes?

Apparently NOT since he does it with such regularity!

> Your vigilante "enforcement" hasn't been working...yet you keep
> whining and carrying on, using the same old tired arguments.

Pot/Kettle/Black

If it's the a-hole I'm thinking of... Yes he is a jerk! I'd call him a "jerk-off" but that would be an insult to masturbation. I remember listening to his bogus ranting and raving over the air. This would have been about last December through about March or April of this year. Talk about your sassy fruitcakes. Aparently he divorced his husband, since he hasn't been heard on the air in months. I understand Maine is pretty progressive when it comes to same sex marriages.

I have to say, he has tamed it down quite a bit since he came under the scrutiny of the FEDS for all his alleged nefarious activities here in the states and abroad. Unfortunatley, he still QRMS all the hams on the east coast when he fires up nightly, splattering up and down the bands with absolutely no regard for law or considerate amateur practices. Here in New England we are all still waiting for Riley to eat his lunch. Hope it happens soon!

He says he is an alternative to the ARRL. I suppose he is, in the way your hand could be an alternative to toilet paper! He is such an asshole in fact, that I call him an alternative to a MAN.

See you on the air,

Chris

Prove it.

Show proof that 200,000 people would not have gotten US amateur radio
licenses between February 14, 1991 and April 15, 2000 if the Technician
class license had never lost its code test.

I don't think you have any proof. Or even any evidence. Just bluster.

That matters not. You don't have any such "evidence". What I wrote is
quite correct. Neither Brian nor you knows whether you know more about
radio than me.

> I've presented just a tiny bit of the "evidence" I have on what I've

> but generalities without any corroborating evidence.

You've presented nothing as "evidence". You've just made claims.

> You insist on making this some kind of personal "battle" over some
> imagined "superiority" in amateurism and the "elitism" as well as

> "superiority" of your status, rank, title, etc. in nothing but amateur
> radio. That keeps happening regardless of the subject title or thread.

That wouldn't be correct, Len. Superiority in amateurism doesn't enter
into it. You aren't a radio amateur. You have nothing to do with
amateur radio. You are to amateur radio what a bowling pin is to
archery.

> You keep forgetting you aren't any official and aren't any judge (you
> keep falling off the bench). You may think you speak for some
> "majority" of ham radio but all you do is speak for yourself.

You aren't any official but you are officious.
You aren't a judge but you are judgmental toward radio amateurs.
You believe you know best how amateur radio should be regulated but you
are not a radio amateur. You are a self-anointed committee of one and
you are a non-participant.

> All you can
> do is attempt to put down others not agreeing with you.

Naw, Len. That's not all I do. I do pay special attention to your
posts though.

> >There is every possibility that Len knows more about electronics theory
> >than me.
>
> Not only theory, but design, practical hardware prototyping to finished
> product, field application and liason, and writing about it in national
> magazines. I've done all that as a professional AND as a hobbyist in
> radio-electronics.

Okay. There's every possibility that Len knows more about electronics
theory (to include design, practical hardware prototyping in finished
product, field application and liason, and writing about it in national
magazines).

> >There is a similar possibility that I have much more
> >operational experience in "radio" or that I have much more knowledge of
> >wave propagation than Len.
>
> "Wave propagation?" Would you know Biot from Savart?

Old Jean Bapiste and Felix? Certainly.

> E and H fields?

But of course.

> Knife-edge diffraction?

Most assuredly.

> Were you intimately
> involved with HF

> communications across the Pacific in the early 1950s for "24/7"
> primary communications service?

I knew there'd be a trick question. Why no, Len. I was busy being ages two through five in the early 1950's. No responsible entity would be likely to put a preschooler in such a position.

I was "intimately" involved with HF communications across the Pacific in the 1960's at hours of my own choosing. My station also worked across the Atlantic and across the Indian Ocean. It did so with less power than yours and I was still a teenager.

I was "intimately" involved with HF military communications, working transatlantic and transpacific paths using a variety of log periodic, inverted discone and rhombic antennas and either 10 kw or 45 kw transmitters from 1968-1970. The station was in operation 24/7 but I generally pulled eight hour shifts.

I was "intimately" involved with in-country HF military operations for a year in Vietnam.

I spent fifteen "intimate" years overseas with the U.S. Department of State where I was responsible for all HF and VHF communications whether by voice, asynchronous data or morse.

I've spent forty years as an active radio amateur, operating various modes on bands from 1.8 through 432 MHz.

> I can go on and on without ever
> touching the recorded and evidencible facts of having spent three
> years being actively involved with the latter. That grates on you.

Three years? Three measly years? It grates on me that you'd dare compare your three years to my experience and pretend to have a lock on knowledge.

> Put that in your Icepack and stroke it.

Is this the part where you eat me for breakfast?

> >There is a certainty that I have forty years
> >more experience in amateur radio than Len.
>
> I've been a radio-electronics hobbyist for 56 years and never bothered
> to get any amateur radio license with its official certificate plus the

I'm certain that no one here wants to "bother" you.

> You ARE
> granted that one item but it would seem you've never ventured out of
> "the bands" (HF) for all your tenure as an amateur.

1.8 through 432 MHz *just* as an amateur. Don't you feel foolish?

> >> How can that be if he has no experience?
> >
> >What I wrote addressed Len's experience in amateur radio. He has none.
>
> Since when is that SUCH an important factor in "radio?"

This group deals with amateur radio and my comments were addressed to
you lack of amateur radio experience.

> The FCC doesn't require any commissioners or staff to hold amateur
> licenses. The Congress of the United States has never chartered the
> FCC to "only" regulate US amateur radio by licensed radio amateurs.

You aren't paid to regulate radio. You're just some guy with no amateur
radio license.

> You keep acting like some kind of land squatter, claiming territorial
> imperative and divine right for holding a grant a long time.

No, I'm not a squatter. I have a license which says I am permitted to
operate anywhere in the amateur bands. What's your story?

> That alone
> is NO evidence of ANY expertise, only the ability to not be caught for
> violations and being able to renew your vaunted license every decade
> or so.

If you had obtained such a license, you'd be in the same boat.

> >> So why so do you give him so much attention?
> >
> >A smart fellow would have figured out that laughing at Len isn't exactly
> >an endorsement of his views.
>
> You wish to squelch all opponents to your royal viewpoints by trying
> to make fun of them, trying to put them down.

I don't have any royal viewpoints but I do enjoy a laugh at your
expense. If I can share it with others, so much the better.

> You can't bear the thought that your viewpoints aren't of the nobility,
> divine statements of some higher radio god. Since you can't talk on
> the subjects, you try to hit the person of the communicator.

Shall I repost some more of your old archived material to refresh your
memory of reality, Len? I wouldn't have to go back very far in the
archives.

> That's been evident for years in here.

It is sure to be "evident" to a guy who sees only what others do but who
is blind to his own past and present actions.

> >> Must you try to tear down Len at every opportunity to boost your stature?
> >
> >Poking fun at Leonard Anderson has never been done for purposes of

> >boosting my own stature, nor is it a "must" on my list of things to do.
>
> Tsk, tsk, tsk...false claim.

How would you know that, Leonard?

> It is fairly clear what you do to anyone not embracing your godlike views
> of amateurism...try to put them down any way you can.

That doesn't matter. You are in no way involved.

> After all these years you keep failing. The technique doesn't work.

Really? The indications are otherwise.

> >If I had to list reasons for doing so, I'd likely come up with a list
> >like:
> >
> >1) Because Len Anderson does it to others on a continuing basis
>
> Poor baby. It's "okay" to attempt humiliation of others because
> you are a radio god and you've been an amateur for four decades.

I note you didn't address your own shortcomings.

> Sigh...another over-inflated EGO...

There, there, Leonard. Your ego isn't THAT big.

> >2) Because my views are in opposition to those held by Anderson, a
> >non-radio amateur.
>
> Hardly. :-)

Hardly in opposition or hardly a radio amateur?

> Google is full of Heil's put-downs and humiliations of NON-licensed

> status. :-)

Individuals? Do you have a mouse in your pocket?

> >3) Because Len comes across as a pontificating windbag who sees
> >himself as an expert in all things relating to radio communication.
>
> Poor baby. More damage evident to the super ego of Heil's.

Really? I checked my ego and it seems intact. Better check yours for
leaks.

> I've never claimed "expertise" in any field of endeavor, just a few where
> I've had lots of experience, hands-on experience for a long time. That's
> anathema to Heil and his "superior" four decades as an AMATEUR.

The experience you listed above doesn't seem like very much at all.

> To quote another quoting a late ballplayer, "It ain't braggin if ya done
> it."
>
> I've done a lot. :-)

...but you never quite got around to nailing that elusive amateur radio
license.

> >4) Because it is soooooo easy.
>
> No...because you are unable to argue on the subjects. All you can do
> is attempt put-downs, attempt humiliating others who won't worship you
> as the "foremost authority."

Would you really like to see those Anderson quotes from Google?

> Living a fantasy is VERY easy. No work required, very little thought.
> Fantasylands allow anyone to destroy their "opponents" with impunity.

Is this anything like your fantasy that you're a real radio amateur?
Do you ever wake up and realize that this is only a newsgroup and that
you aren't a part of the real thing?

> Feel free to indulge your super ego and demand all do as you say.

I've never demanded you do anything, Len. I don't give a rat's patoot
if you ever obtain a ham ticket.

> Few will.

A few might if any demands had ever been made...but they've never been
made.

You aren't the "authority" and are no "official."

Back at ya, Len and you're no radio amateur.

> Your credence
> went to hell along with your robust oberst uniform a long time ago.

No, my Creedence went to Helsinki. I don't know what to make of your
peculiar comment about a uniform.

Welcome to RRAP. Get a few years in the group and maybe you'll get to know what my attitude toward no-coders IS. Right now, you obviously have no clue as to what my opinion of code testing is, instead jumping to a conclusion based on one sentence from just one of hundreds of posts I've made in this NG over the years since I got my ham ticket.

What I *do* have an attitude about - and it's not a good one - is when people hide behind posting anonymously, demonstrating that they don't even take their *own* opinions seriously enough to attach a name and call to what they post, then whine when nobody else takes their posts seriously. Fit anybody you know?

>You should of elmered the hobby, instead of ridiculing
>any newbie who showed interest. Too late now.

Putting aside the fact that you're a borderline illiterate ("should of" instead of "should have"? C'mon, I knew better than that before I finished second grade...what year did you drop out?), I for one wouldn't be very interested in elmering anybody who demonstrates callous disregard for the regulations, like certain trolls in this NG for example. Beyond that, I think my track record shows that you lack sufficient knowledge of the truth on which to base an intelligent opinion regarding my elmering activities, so instead, you posted a singularly unintelligent one instead. You really shouldn't post when you're smoking crack. :-)

>>> Of course, if the bandwidth wasn't restricted to 200 Hz, almost
>>> any variation on PSK modulation would out run CW for efficiency,
>>> as can easily be demonstrated using Shannon's formula.

That depends on how
"efficiency" is defined,
doesn't it? If we count
the power required to
operate the radio and
the power required to
operate the laptop,
PSK-31 isn't that
"efficient"....
>>>
>>Yeah, Frosty, most of us know all that, it's been well

>>applicability to ham radio outside the theoretical.
>
>Apparently your Empirical Theory is a little sparse there DICK.
>
>Why and how do you think PSK-31 was invented to begin with?

I happen to know
the answer to that
question.

The inventor and
his helpers were
interested in a very
narrow bandwidth

"keyboard to keyboard"
mode to replace
Baudot RTTY.

> It
>clearly does have practical benefits, and when you attempted to
>use PSK-31 you *were* making use of those benefits.
>
Of course.

OOK CW has benefits, too.
Yet it seems to bother some
people to admit that.

It is interesting to note
that Larry Roll and
Dick Carroll have actual
experience with PSK-31,
while Brian Burke, Floyd
Davidson and Len
Anderson have none. Yet
the latter insist upon
denying the experience of the
former.

And vice versa.

Why not just use the mode
you like best and have fun?

If PSK-31 is so wonderful,
why is it that only two of
the five named have actually
used it?

Ranting about completely irrelevent subject matter deleted.

There was no "geo-political bashing".

Jim states he was misquoted in such a way as to make it appear
that he was taking "credit" for work that he was only partially
responsible for.

He stated here that such was not the case and that he wanted to
make it clear that such was not his intent.

Nice try at character assasination, you lying sack of pus.

> Leonard H. Anderson
> retired (from regular hours) electronic engineer person

A scumbag idiot with nothing better to do than act like a scumbag
idiot.

I didn't "demand" anything, Lennie.

I point out that you make it a point of harrassing others about
it, yet indulge yourself in the most childish and pathetic of efforts
to see who can out-insult the other.

You insist on referring to yourself as a "professional", but you
have yet to prove yourself "professional" in ANY discipline.

> You REALLY need some mental therapy on being able to
> get along with anyone else.

Uh huh. Coming from you, I rate this about 136 on a scale of 1
to 10 on important things to do.

> Free Handout Ham Licenses?
>

There has been a free ham license ever since the codeless tech was introduced a few years back. The 5 wpm code requirement has further moved things in that direction. Idiots on the ham bands.

11 meters has come to the ham bands. I listen to the bands and it's certainly not the way things were in the 1980's when I got licenced. I might as well just listen to CB channel 19, it all sounds the same now.

ARRL plan back fired on them. They worked to dumb things done in order to produce more licensee's who might join the organization and fill the corporate bank accounts, but instead, they got a bunch of idiots who don't care bacause getting a license is easy now and when you don't have to work to get the benefits, the benefits you get don't mean a whole lot.

All real hams out there who remember how the bands used to be, send the ARRL a nasty-gram and cancel your League memberships. They screwed us over big time by not protecting the integrity of the Amateur radio Service.

No Code.... No Ham!

I disagree. American hams are obvious by their absence. The DX goes
outside the US 'phone bands to avoid Yank QRM.

That's because it's illegal to call it a kit. Thanks to misnehaving cb
and freeband folks.

But how many amps will the combo draw, transmit and receive? My K2
draws about 250 mills on receive.

> That puzzles me.

It's a fact.

> I honestly don't think it's due to new hams preferring
> CW.

Why not? I know lots of new hams who prefer CW, once they get a
reasonable set of skills. That doesn't mean everyone will like it.

> Maybe there are people who used to only contest on phone that are now
> doing the CW leg as well.

Perhaps.

Or perhaps the declining sunspots and proven superior performance of
CW are drawing more hams to use it.

Perhaps the simple fact that CW is unique is the attraction.

Perhaps it's just the rising number of hams.

But the fact remains that for whatever reasons, HF CW USE by hams is
increasing in at least some measurable ways.

This fact puts the lie to the claim that "young people" and "new hams"
aren't interested in the mode. At least some of them are.

In as much as you are not practiced in Amateur Radio techniques
no one would expect you to know the difference.

There IS a diffrence.

Actually that would be over 40 years ago as Heathkit had already
incorporated hybrid technology in the mid sixties.

(What a lame try, Lennie...You really DO have to try harder!)

> Hardly a recently changed technology.

Hardly any effort to poke holes in your anti-Amateur Radio rants.

> TRY TO REMEMBER TO TAKE YOUR MEDICATIONS!

Try a better obfuscation, Lennie. You're getting just too easy
to make an idiot out of...Again.

Sounds like you old pro-coders are getting upset! I worked and had to pay to get my no-code ticket. Now that Im a coded tech, I still say, rid the code test. You may say it dumbs it down, to me it makes for more conversation and more to converse with. Who wants to talk on a piece of equipment that cost $1000 + but no-one to hear you? Why not let these CB'rs get there license so they can learn the principals of ham radio instead of bootlegging. I realise that you guys are all stuck in 1950, but WAKE UP!!!!!! This is 2003!!!!! This reminds me, Wasnt it quite a few years ago that a bunch of HAMS like yourselves were complaining about solid-state over tube? Oh my god! There dumbing down radio with RF transistors!!!! What is next!!!!! Quit whining and get involved in making the radio better for all. All you pro-coders are just wasting your breath. They still make tubes, but you have a choice if you want to use tube or transistor equipment. Isnt that nice, To have a choice? I chose to advance in my hobby by going to Extra soon, and I dont need a code holding me back. Do you actually think that the bad CB'rs are going to go get a license so they can JAM and CUSS at you? NO!!! The good ones will! So where is the FREE at?

Cya, wouldnt want to be ya.

Here's the definition anyway:

QFU? - What is the magnetic direction (or number) of the runway to be used?

QFU - The magnetic direction (or number) of the runway to be used is ...

I've never heard that on the ham bands, though.

>I am sure you have convinced yourself of this, however you have
>not provided one iota of "evidence" other than your own tainted
>opinion, Vipul.

I let my membership expire. Its going to be hard to verify. I may be able to meet them at the weekly breakfast. Still, people just show up, and I don't know exactly who from the club will show up. I cannot provide an answer right away. Or I could make an announcement at next club meet'g. Next club meet'g is in Sept. (they don't have meetings in Jun, Jul).

>> Other than Field day, an event does not HAVE do be scheduled during Fri,
>Sat
>> night. Most people would do more recreational activities during that time.
>
> Vipul, the average American WORKS Monday through Friday with
>Saturday and Sunday off. When would YOU schedule these "activities"?

Still, Hams find the time off work to do the DXexpedition, go to Hamfests on Fri when that Hamfest is Fri and Sat. So, they took that day off to attend the Hamfest or DXpedition.

Why take Fri off to go shopp'g at a Hamfest, when the Hamfest is also on Sat? If you went to a vacation spot, wouldn't you go to the beach, rather than stay at your trailer/shack?

If you are taking time off, wouldn't you want to do more recreational activities than shopping, or operating? If I was at a vacation spot, I would do the local activities.

>Foreign operators on the
>other side of the world should have been denied the chance to make a
>contact just becasue of thier location?

Only one of the days would be needed to do that, either Fri night or Sat night, not both. There would still be plenty of time do the local vacation stuff.

>Furthermore, the very characteristics of HF operation generally
>dictate better propagation and long-distance communication
>opportunities at night.

And still, it would not be necessary to do the whole night. And it would not require every Ham to be present at all hours (they could take turns).

>YOU call it "anti-social"
>because you do not understand it or refuse to participate in it
>because they are not doing it the way YOU think it should be

>done.

Not just the way I think it should be done. The great majority of Americans would feel the same way. There is a time for radio contacts, just not on Sat night.

Work the next November Sweepstakes on the CW weekend. Since the year first
licensed is part of the exchange, you'll see that there are indeed some new
hams working CW. I worked it in 2001 (skipped 2002 due to OM's birthday
being that weekend) and there were people who had only been licensed a
couple of years out there working it.

It's probably a combination of all the above. However I've known several new hams who are fascinated by the mode and see the CW contests as a way to both master the mode and have fun.

See? Now YOU'VE jumped to a false conclusion. I didn't pretend
prescience; I asked a question.

> Tsk, tsk, tsk...all you can do is put down others who raise > questions
> that might threaten your "superior" status in amateur radio.

Tsk, tsk indeed, Foghorn. You have it backwards. Someone made a
statement, I asked the question. Why are you concerned with my status
in amateur radio? You aren't involved.

> Try READING what Alun said. He raises a valid point.

Try reading what I said. Alun raised a point. It isn't necessarily
valid. I asked a question. You're all fogged up.

> You are still REFUSING to accept anything contrary to your precious
> viewpoints.
>
> That won't make them go away.

Granted, my precious viewpoints are not going away. Let me ask you, are
you now accepting anything contrary to YOUR precious viewpoints?

> It just arouses enmity among all those who refuse to worship your
> radiogod status.

What's it to you? You have nothing to do with amateur radio. Have you
made up your mind yet. Some time back you stated that I wasn't a radio
god then I was a radio god then I wasn't a radio god. Have you made up
your mind yet?

From: "Dee D. Flint" deehays@qix.net

>Speculation is not evidence. If you haven't asked them, then there is NO
>way you can know.

I'm trying my best. Meet'g up with those Hams and verifying the claim is not an easy task.

>And what do you think "most people" do? Everyone I know does something
>different.
>A lot of people simply stay
>home because they aren't interested in spending their money on bars and
>parties.

Most people would vacation at a vacation spot. Especially when they took the day off. Especially when they are at that location the want to do the vacation activities specific to that location.

After their visit to that vacation location, they won't be able to do those activities again. They can operate from their shack any day of the week.

>Besides that, this is only a few
>weekends out of the year.

That's why, when you actually get a vacation, you should do the vacation activities. You won't get that chance to do those activities at another time/place. Why go to THAT location if you aren't going to do anything there that involves THAT location.

Now, I'm not saying radio propagation does not involve THAT location. But, they had plenty of operating time day, and night to experience that. They just chose to cut themselves off from the other experiences of THAT location.

>Therefore if
>they are "put off" by the hamfest, it's quite possible that ham radio is not
>the hobby for them just like it's not appropriate for you.

I'm not put off by Hamfests, just Hams. Originally something in amateur radio got me interested, even addicted. Although, a few months ago, I personally dropped out of the EE field. I still like to build stuff for fun. I just don't see those same qualities in what got me interested in Amateur radio and the activities and interests in the Ham radio clubs support. Also, that most Hams are anti-social, doesn't help either.

>We don't need
>more people with licenses who are not active.

"Active" does not just mean contest scores. It can also mean Homebrewing, troubleshooting, tuning, radio direction finding, AND antenna setups.

>Have you ever been to other major events in other hobbies?

This applies to any hobby, not just radio. I still wouldn't do those hobbies either on Fri, Sat night at a vacation spot.

> RADIO!

What is a "military wonderful"? The military often elects to allow
those with experience to skip technical school.

> Tsk, tsk, tsk, most of us in my Fort Monmouth Signal School
> classes were NOT radio amateurs. Few were professionals.

I wasn't writing about your class.

> WE
> couldn't use morsemanship skills to advance in radar or microwave
> radio relay MOS training. Of course that was in 1952 when all
> US radio amateurs were very knowledgeable about radar and multi-
> channel radio relay, right? :-)

My job didn't involve radar. I guess the Air Force found it lacking for
handling long range message traffic.

> Once out of Signal School and assigned to a unit, most of us had
> to do professional level work like keeping all those multi-channel
> radio relay systems up and running 24/7. Of course, YOU don't
> recognize "24/7" as anything at all, do you? [you haven't done so
> before, why hope you might?]

You never ever worked "24/7" No one has ever worked "24/7". Your
station was open and operation for "24/7". I have three years military
experience in which my station was open "24/7". I never worked "24/7".
Then again, I didn't have to go to technical school. I was sent
straight to my first post where I immediately began doing--what do you
call it?--professional level work.

> In my case, I had to learn, on the job, all about high power HF
> transmitters and keeping the primary communications circuits
> across the Pacific up and running for 24/7 for a year and a half.
> No problem. Made E-5, NCO and not the Specialist, in a year and
> a half, waiting around for the microwave radio relay equipment to
> finally arrive. Morsemanship skills didn't matter one whit. Neither
> were there any points for DX contesting or reading QST ads cover to

You had to learn on the job? Didn't you complete the schooling?

> >Do you know
> >when the U.S. might need trained operators or when another draft will be
> >instituted?
>
> You mean REinstituted. The military draft (conscription) ended way
> back in 1973. That's THIRTY YEARS AGO.

No, I meant instituted. Did you happen to notice the modifier "another"
before the word "draft"?

> The ENTIRE US military is VOLUNTEER. For 30 years.

I knew all about that. Unfortunately, that isn't what I asked.

> I've seen enough examples of the all-volunteer US military to know they
> are bright, go-getting military professionals who know what to do with
> professional equipment.

Couldn't you answer the questions?

> Once the all-volunteer military is assigned a task they DO it, and DO
> IT professionally and they WIN their objectives. See Panama, see
> Grenada, see fun in the skies over Libya, see the First Gulf War, see
> Afghanistan, see the Second Gulf War. It was Whupass time and
> the "other side' got whupped.

Did you understand the questions?

> The US military has an excellent schooling system for electronics and
> radio, NOT needing some ham skilled hobbyist "training" in working
> DX for contest points or having fine picnics-with-radios called "Field Day."
> The US Army can DO field communications anytime and for months.

Did you even bother to read the questions?

> >Are you miffed because you don't have any war stories relating to code?
>

> Hell NO. None of us at station ADA had to know any morse code or
> use it for primary communications trans-Pacific a half century ago.

So what?

> Morsemanship was NOT a useful skill back then and it isn't a useful
> still in radio NOW.

That is simply a bogus claim from one who does not possess the skill in
question.

> Too many of you mighty macho morsemen are living in a fantasyland
> like the fake "colonel" in here five (six?) years ago trying to make us
> believe his "son was behind enemy lines in Iraq sending intel back via

I think your cast iron has developed a crack. Not all of my tours were
in Africa. You don't have a clue as to what I did during any of my
tours. Is this the part where you're supposed to be eating me for
breakfast?

> Show us all your greatness with experiences with SHARES and ALE,
> not the drink. We've seen the results of drinking from others. Sober up.

Your wild rants are very sobering, Len.

> You are wasting everyone's time in here.

Everyone's? Do you have a telegraph key in your pocket?

been alive when something took place. I pointed out that you weren't
alive during some of the things which you've pontificated on in this

venue.

> Try reading a BOOK on the REST of the world of radio instead of what
> if spoon-fed you by the little publisher in Newington.

"YOU have NO authority to call anyone anything, demean them,
make fun of them, or anything else...yet YOU continue to do so.
That indicates the perversity of your control-freak psychosis."

It doesn't take a regulator to truthfully state that you weren't involved and are not involved in amateur radio. Don't tell me what I am to amateur radio. I'm a licensed ham and have been for decades. You, quite truthfully are not involved at all in amateur radio. You aren't a judge of what hams do or have done. You are not a regulator.

> I've had a successful career in PROFESSIONAL radio-electronics and

Folks? Well, there's you. Then again, you aren't a ham. You're just a groupie.

> >In this game, you aren't nobility and you aren't a peasant. You're an
> >onlooker.
>
> That's all you are, big radio god of the AMATEUR bands.

You've got it wrong, Len. I have a license and have had it for decades.
I make contacts via amateur radio daily. I'm a participant in amateur
radio. I don't issue catcalls from the sidelines. The guy who does
that is you.

> A hot-air balloon who plays with ready-built radios and talks tuff as a
> newsgroupie.

Why, Len, you're the wanna-be.

> Get a better life.

I'm quite happy with this one, Len. Yours seems to be a little lacking
in light of your ham radio envy.

>distress system came online?

MF Morse CW (the "500 kHz SOS system") was mandatory for vessels
making voyages in the open sea except for vessels under 1500 gross
tons displacement and all vessels operating exclusively on the Great
Lakes. For those vessels, MF (2182 kHz) 'phone was mandatory.

The GMDSS system offers the choice of MF/HF (DSC, SITOR and SSB) or
INMARSAT use in those areas where both are available. Even where the
ship elects to use INMARSAT, it must still have the MF/HF capability.

>> One of the San Francisco area marine radio techs, a ham, applied to

Yup. Money talks.

>Which is why you can watch a 2003 TV show on a 50+ year old TV
>receiver. NTSC, anyway.

I spent part of the day at the local Fox TV station with our Society
of Broadcast Engineers chapter getting the nickel guided tour of
their digital TV installation with all the automated whiz-bang
systems. It has its advantages....

>> And the US Coast Guard and other similar agencies world-wide
>> continue to transmit NAVTEX bulletins (marine broadcasts) on 518 kHz
>> worldwide using SITOR.

>Using a system that is almost completely automated.

Someone has got to cut the "tape" (computer memory, to be exact) and
occasionally we get bulletins for Chesapeake Bay and New York Harbor
(with local message IDs) intermixed with those for the Pacific

Northwest.... <ggg>

Overnight I get the signals from the Canadian station between
Vancouver and Alaska, and it's interesting to see the difference in
approach and procedure between the USCG and its Canadian counterpart.

>> I'm not throwing my AMTOR/SITOR TNCs away just yet.

SysD. If I put it over there we can remove the engine for backup and put
all the system data on SysA and SysB. The database is written and I'm near
finalization on coding. I should be able to develop a test environment over
the weekend. If you will create a small database of around 250 records, we
should then be able to test next week. Hopefully, we'll be ready for the
launch end of Q3!

>Larry is not theorist about empiricism, but rather an empiricist.
>
>
> empiricist, n. -- a quack

Floyd:

I request meaningful participation in the debate, you respond with more
name calling. If I made some sort of faux pas in the use of the term
"empirical theory," anyone interested in maintaining a useful discussion
of the issues would have simply corrected the error, and let it go. However,
it seems as though I've merely armed you with a straw to grasp, to be
utilized whenever you can't be bothered to continue to contribute
rational, logical arguments.

Since you've obviously abandoned the notion of reasoned
discourse, you automatically lose. You're out of your league here,
Floyd. Just like your colleague, Lennie.

Lennie:

I've already done my homework. I was waiting for Floyd's contribution, but only received more name calling. I can only assume that you brought Floyd into this discussion to keep up the pressure of churlish, immature behavior in order to eventually claim victory. Don't look now, but it's not working. You're losing traction faster than a wet worm climbing a greased pole.

What "war"?

FCC has been pushing for nocodetest since 1975. They've been nibbling away at
both the code and written tests since then.
>

> Gloat time is over. Your time has come. You now have the chance to

Maybe we'll see a lot of newcomers and technoadvances after the code test goes.
And maybe we won't. Personally, I don't think we'll see either.

If that happens, what will be blamed for the ARS' perceived problems??

A few other countries have dumped code testing. More are on the way to it. It
will be interesting to see what happens in those countries.
>

No, Mopar, the VEs charge. It used to be free at the FCC, but, for me at least, that meant a 60 mile trip (120 miles round trip) to the FCC in Buffalo, NY, and one minute of perfect copy at 20 words per minute. When I had dropped my tickets and decided to retest in 1993, I believe it was under $6.00 for the session. That was 20 words per minute, but multiple guess. Now it is 5 words per minute, but the testing charge is considerably higher (don't ask me, I don't know. I simply showed up for the tests in '93. You don't have to score 100%). So, while someone may pay for the exam, that 120 mile round trip savings is worth something. Don't worry too much though. I hear the FCC is going to try to package the licenses in boxes of Cracker Jax. :)

The BCI is pretty severe at night in the US, so hams in VE, for example,
who have available phone spectrum below 7100 are likely to use it.

>>
>> On the other bands, I think a lot of DX ops don't even know how far

Those of the DX who are not DXers are more likely oblivious

Hopefully. Quite a lot of people in HF Pack have built it, and I don't
hear much about problems with it.

The Yaesu isn't as light on current as it ought to be for a portable rig. With the linear, the current drain of the rig will pale into insignificance anyway, at least on transmit. I'll try to look up some actual figures, though. I don't backpack, although I often go camping in tents, so I can bring a fairly large battery to power a linear.

I also use the FT-817 mobile. I would love to also own an FT-100 or an FT-857 for mobile use, but my bank account dictates otherwise.

I can see that some contesters would switch, as they are pragmatic about what mode they use provided they score points. With poor band conditions a 'smaller' station might be more competitive in the CW leg.

The newsgroup deals with amateur radio.

> I got one of those 47 years ago.

No, you never obtained an amateur radio license. The one you got can't
be used under Part 97.

> >> YOUR fantasy seems to be stuck in the rut that whatever YOU like

> >for decades.
>
> Whoopee. Do we crown you emperor or something?

We? Got a Vibroplex in your pocket? YOU don't do anything. You don't
have a role in amateur radio.

> Maybe your nobility will get you a job at the FCC where you can
> "rule" over amateur radio.

How would that effect you?

> How about at ARRL? All those years of AMATEUR experience ought
> to put you in the Executive President position...right behind another
> Dave now holding Executive President For Life. <shrug>

Well, kindly old gent, I turned down such a position in 1975. The
Leagure really doesn't pay very well. Besides, why would that interest
you?

> >> YOU are NOT an official in the FCC, federal government, or even
> >> that pseudo-governmental organization called ARRL.
> >
> >No, and I don't need to be employed by the FCC.
>
> Oh, my, assuming the mantle of leadership without authorization?!?

I don't need FCC permission to remind you that you having nothing
whatsoever to do with amateur radio.

> >The ARRL is not a pseudo-governmental organization.
>
> Tsk, tsk, tsk...then they've been deceiving everyone with all their
> "district directors elected by democratic action" and all that!

You mean you've been deceived by the League? I don't think there's been
any misinterpretation of the League's role by others. Why should any of
this interest you. You aren't an ARRL member and you aren't a radio
amateur.

> >I am a life member of the ARRL and

> don't you?

It isn't necessary. If its all the same to you, I have much more fun
the way things are going at present.

> Make this newsgroup some kind of "ARRL South" and all you
> morsemen can sit around giving each other high-fives and claiming
> greatness in the very closed, closeted elite area of your own > making.

I still don't follow your fixation on morse, the ARRL and the like.
You don't belong to the ARRL. You aren't being forced to use morse.
As a matter of fact, you aren't a radio amateur.

> The rest of the world won't care much since the professionals in radio
> are busy keeping world communications going around the clock.

>
> "If thine eye offend thee, put it out."

It really makes little difference what the "professionals" are doin in
radio. I have quite a bit of experience in the "professional" side of
radio. This group happens to deal with amateur radio. You have nothing
to do with amateur radio.

> >> I've also been a radio-electronics HOBBYIST since 1947. Hobby
> >> activities not for pecuniary interest are AMATEUR activites.

> Sigh...the credentialist is stuck on a one-note theme.

Nope. Just correcting your incorrect statement.

> You've carried your radio god personna so long you've gotten to believe
> that the only radio is amateur radio.

Not at all. I simply recognize that this particular newsgroup has
nothing to do with professional radio operation or policy.

> >> If they
> >> involved making money at it they would be professional activities.

It was sarcasm, Leonard. It was directed to your babbling about being a
radio hobbyist at the amateur level and attempting to equate that to
amateur radio.

> >> YOU keep insisting one MUST be "licensed" to be an AMATEUR.
> >
> >YOU keep getting it wrong. For you to be a radio amateur, you must pass
> >a license exam. You haven't.
>
> Let's see...according to Heilian definitions, only LICENSED radio
> amateurs are AMATEURS.

Actually you've managed to screw that one up too. Only those who have
passed an amateur radio license exam become licensed radio amateurs,
permitted to operate under FCC Part 97.

That would make every other radio hobbyist
> "professional?" Not so. Your Beeperitis has led you off on another
> merry morse chase of illogic.

The illogic and confusion are yours.

> >> YOU keep holding up having a license grant is somehow making
> >> YOU "better" than anyone not having an amateur license.
> >
> >No, YOU keep interpreting my words in that manner.
>
> There's no need for "interpreters." What you keep harping about is just
> the same old judge-jury-executioner bullshit you've always used.

As long as you have some confusion over whether or not you're a radio
amateur, interpretation is needed.

> It doesn't work. Fix it. Remember, you are the self-styled Radio God.

Is that your final answer?

> >Passing a license
> >exam makes you a radio amateur, a part of ham radio. You haven't passed
> >such an exam and are not a part of amateur radio.
>
> I'm not interested in "becoming part of amateur radio."

Just a few posts ago you told us that you were involved in radio as an
amateur and you seemed to believe that made you a radio amateur.

> You don't seem to understand the concept. [Radio gods are like that]

You don't seem to give your dieties much in the way of power.

> I'm just trying to get the morse code test off of all US radio license
> examinations.

To what end? You aren't involved.

> Maybe you ought to review the FCC rules and regulations regarding
> Internet access. You cannot issue any "NAL" for someone objecting
> to your self-proclaimed "authority" or "judgement" over who can and
> who cannot post in newsgroups.

Really? Do you know anyone who tried that?

Nor can it be used in any other radio service without a STATION
license under which he can operate. No station license...No
operating...

Every other radio service is going to specify channels of
operation, modes, etc. An Amateur license grants liberties Lennie can
only dream of. The only thing he CAN do that Amateurs can't is bill
for his servies as an operator or repairman.

Of course there's always Part 15 and Part 95...

I love how Lennie keeps dropping himself into the
"pot/kettle/black" mold. He LOVES to accuse others of doing exactly
what HE does.

Sheeesh.

> I didn't say it. Floyd said it. He appears to have been mistaken.

And YOU do...?!?! You sure take advantage of the opportunity!

> YOU keep insisting one MUST be "licensed" to be an AMATEUR.

As always, only HALF of the answer..One must be "licensed" to be
a RADIO AMATEUR...THAT is specified by Part 97 of the FCC's Rules and
regulations, Lennie.

You remember them, don't you? That unlicensed Federal body that
establishes the radio rules for ALL of us...INCLUDING you...?!?!

> YOU keep holding up having a license grant is somehow making
> YOU "better" than anyone not having an amateur license. YOU
> seem to think that amateur radio is some event of epiphany, of glory
> and greatness in radio, some kind of nebulous "service" to the
> nation, transcending anything done in any other radio service.

In many cases it DOES "transcend" anything done in any other
radio service.

It is the ONLY radio service in which the FCC holds operators
responsible for meeting certain SERVICE obligations and expectations.

This is codified in 97.1. You keep trying to ignore this
paragraph, but the FCC keeps enforcing it. Ya think they know
something YOU don't, Sir Scumminess?

> Feel free to indulge in your fantasy. Just remember that your output
> of constant personal attack of others not accepting your views makes
> YOU the perverse individual here.

Uhhhhhh, I don't think so. That would belong to the unlicensed
outsider.

> So far, you haven't "won" anything. Why do you keep on with the
> same old flame trash?

Why do YOU keep on with the same pathetic excuses, lies and
rhetoric, Lennie?

What IS this newsgroup about, Lennie?

From what >>I<< see, it starts out "rec.radio.amateur", and you
are NOT a "radio amateur", as has been pointed out to you.

> Poor baby. Big hero "I was in 'Nam" radio god can't stand ordinary
> fire fights...cries and carries on when he is subjected to return fire.

Ahhhhh....so you're here to fight. I thought so...YOU said you
were here for "civil debate".

See what happens when you lie all the time, Lennie? You get
caught up in your own tales and then usually wind up stepping on your
own tail!

> Quit acting like an Oberst in the Amatur SchutzStaffel (A.S.S.) and

Actually, you can't provide ANY answer, Vipul, and probably never
will. Just like Lennie, you get caught up in your own tales and
usually wind up stepping on your own!

I just think you don't want to ID the club because YOU know the
kind of responses I'd probably solicit if I mentioned YOUR name to any
of these folks.

Of course you KNOW I could just stick a pin in your QTH and draw
a 50 mile radius and start making inquiries...Wanna bet on what I'd
turn up, Vippy...?!?!

> >> Other than Field day, an event does not HAVE do be scheduled during Fri,

>
> Still, Hams find the time off work to do the DXexpedition, go to Hamfests on
> Fri when that Hamfest is Fri and Sat. So, they took that day off to attend the
> Hamfest or DXpedition.

And look at who goes on "DXpeditions", Vippy...

It's NOT "Joe Q Ham"...It's guys with the personal finances to
afford going on a DXpedition!

And sliding out of work a few hours early on a Friday to attend a
once-a-year function hardly "makes" your point about doing things on
alternate days. Almost everyone can squeeze in a three-day weekend
once in a while...even you!

> Why take Fri off to go shopp'g at a Hamfest, when the Hamfest is also on Sat?
> If you went to a vacation spot, wouldn't you go to the beach, rather than stay
> at your trailer/shack?

Uhhhhhh....perhaps, like ME, he has a job that requires he WORK on
Saturdays?

Maybe he's a Seventh Day Adventist and going to the hamfest on
Saturday would violate his faith?

> If you are taking time off, wouldn't you want to do more recreational
> activities than shopping, or operating? If I was at a vacation spot, I would do
> the local activities.

Maybe because you are boring and unimaginative.

YOU assume that "operating" the radio had no recreational value
for that person just becasue YOU don't like it!

> >Foreign operators on the
> >other side of the world should have been denied the chance to make a
> >contact just becasue of thier location?
>
> Only one of the days would be needed to do that, either Fri night or Sat night,
> not both. There would still be plenty of time do the local vacation stuff.

And from what perspective of practiced experience do YOU make the
assumption that Saturday is inappropriate for this?

Just because it's unacceptable to YOU becasue of YOUR personal
needs, wants or desires...?!?! HA!

> >Furthermore, the very characteristics of HF operation generally
> >dictate better propagation and long-distance communication
> >opportunities at night.
>
> And still, it would not be necessary to do the whole night. And it would not
> require every Ham to be present at all hours (they could take turns).

"They" usually do...Except when the other operator in the shack
is an inexperienced No-Code Tech who can't or won't learn how to "do
it" the way hundreds of thousands of others do it...

Ooooops! That would be YOU, Vippy!

> >YOU call it "anti-social"
> >because you do not understand it or refuse to participate in it
> >because they are not doing it the way YOU think it should be
> >done.
>
> Not just the way I think it should be done. The great majority of Americans
> would feel the same way. There is a time for radio contacts, just not on Sat
> night.

The "great majority of Americans" are NOT licensed Amateur Radio operators.

The great majority >>OF<< licensed Amateur Radio operators around the world see it differently, Vipul!

The "system" that exists today IS the way it is because EIGHTY YEARS of practice and experience has demonstrated that this is the way it works best for the "great majority" of >>LICENSED<< operators...NOT lay citizens.

That YOU find it inconvienient or "inappropriate" is just too darn bad for you!

> activities specific to that location.

Who are YOU to decide what is "recreation" for ANYONE except
yourself, Vipul...?!?!

And if that "location" is "rare" from an Amateur Radio
perspective, they ARE doing something "specific to that location" ! !

I certainly cannot append my callsign with "/V31" or "/3Y"
sitting in Winchester, Tennessee. You have to GO there to do it!

> After their visit to that vacation location, they won't be able to do those
> activities again. They can operate from their shack any day of the week.

You mean if I go to Aruba to operate during the ARRL DX contest
I cannot got there on a different weekend and go swimming, dancing,
etc etc etc...?!?!

Where is THAT law posted, Vippy...?!?!

> >Besides that, this is only a few
> >weekends out of the year.
>
> That's why, when you actually get a vacation, you should do the vacation
> activities. You won't get that chance to do those activities at another
> time/place. Why go to THAT location if you aren't going to do anything there

> that involves THAT location.

You got the intent of Dee's statement backwards, "Mr. I'm An EE".
There are only certain weekends that certain >>Amateur Radio<< events
occur! The ARRL or CQ contests only occur on certain weekends each
year. Assuming that you have two or three contests you care to
operate in, and wish to activate an unusual callsign, (ie: Belize,
V31), you are limited to THAT weekend.

If you want to go barefoot on the beach and collect coconut
shells, there's still 48 more weekends in the year to plan for. If
you can't squeeze out more than one Saturday-Sunday "vacation" a year,
maybe you need to reassess your career choice!

> Now, I'm not saying radio propagation does not involve THAT location. But, they
> had plenty of operating time day, and night to experience that. They just chose
> to cut themselves off from the other experiences of THAT location.

Says who? You? HA!

That's like saying you don't hate chocolate milk, just the taste!

(Waht an IDIOT!)

> Originally something in amateur radio
> got me interested, even addicted.

Looking for "preety fems", no doubt.

> Although, a few months ago, I personally dropped out of the EE field.

You were never in the "EE field", Vippy. Why do you keep
suggesting you were?

> I still like to build stuff for fun. I just don't
> see those same qualities in what got me interested in Amateur radio and the
> activities and interests in the Ham radio clubs support. Also, that most Hams
> are anti-social, doesn't help either.

You ahve yet to prove that Amatuer Radio is anti-social! it is
not. By it's very nature Amateur Radio is VERY social. Unless you
obtained an Amateur license for the SOLE purpose of cunducting one-way
experimentation or remote control of models, you will invariably
interact with OTHER Amateurs.

Now...Considering your ATTITUDE in THIS forum, I have NO DOUBT
that local Amatuers do their best to cross the street when they see
you coming, making it APPEAR as though they are anti-social...They're
just anti-PITA Idiot.

> >We don't need
> >more people with licenses who are not active.
>
> "Active" does not just mean contest scores. It can also mean Homebrewing,
> troubleshooting, tuning, radio direction finding, AND antenna setups.

Hmmmm...You mean like Field Day, ARES, RACES, Public Service,
Foxhunting, VE testing, etc etc etc...?!?!

ALREADY BEING DONE!

> >Have you ever been to other major events in other hobbies?
>
> This applies to any hobby, not just radio. I still wouldn't do those hobbies
> either on Fri, Sat night at a vacation spot.

I imagine that your life is a laundry list of unfulfilled
activities and thier corresponding excuses as to why you couldn't or
wouldn't do them.

Your loss...Stop bothering us.

>least, that meant a 60 mile trip (120 miles round trip) to the FCC in
>Buffalo, NY, and one minute of perfect copy at 20 words per minute.

It was free at the FCC until 1963 or 1964, when they began charging for exams (except Novice). That continued into the mid 1970s. The fee for an exam started out at $4 and went up to $9.

Now $9 doesn't sound like a lot today but back circa 1970 it was a lot of lawns cut or papers delivered if you were a kid. Even if you were an adult it could be a few hours' net pay. $10,000/yr was a good income back then, which works out to about $5/hour. Adjust that for inflation and today's VE fees are cheap.

As AA2QA points out, though, the big expense and effort for many hams wasn't the exam itself but getting there. A kid in school had to wait for summer and working folk had to take at least a half day off 'cause the exams were on weekday mornings. No do-overs or CSCEs, either, if you failed by even one question, or were one letter short of the required copy, you could not retest for 30 days.

I was lucky; Upper Darby to the Philly Custom House was just a subway ride with a short walk at each end. For a kid in Harrisburg, Scranton or South Jersey it was a big deal just to get there.

The end result, though, was that most hams went to the exams extremely overprepared. Wasn't worth taking a chance on failing.

The Candidate is a pretty good film about an idealistic fellow, (Robert Redford) the son of a former Governor, who gets caught up in running for office after being prodded by the local political machinery. Along the way, he compromises most all of his values (all that is not relevant to the case at hand. But in the end, after being elected to office, amongst the victory celebration, he looks to his campaign manager (Peter Boyle - Haw) completely confused, and asks "What do we do now?" He was completely lost and didn't know what to do.

My point is that I see a close relationship between that ending and the situation we have here. No real thought has been given to the aftermath of the ending of the Morse code test.

Back to now...

After such a change, lots of different ideas come out of the woodwork to replace the vacuum left by the probable disappearance of the Morse code test. Some ideas are good, some make me shudder.

But the fact is that since if the test disappears and nothing else happens, it very well does mean that it is a reduction in knowledge required to get a ticket. All arguments on what constitutes "knowledge" in these regards is kind of like defining "is". You have to learn less, no possible dispute without looking pretty silly.

All this means that those who believe that requirements for a ticket should be lowered have the upper hand.

Those who do not believe that, that is to say that a Morse code test is a desirable thing, or those who want the writtens to be reflective of a fair degree of competence, have an uphill battle, and at the moment are regarded as the losers.

I am very disappointed that the winners in this one do not seem to have any plan at all. All we hear are their personal thought on how *they* don't support some of what is being proposed. That's nice, but Doggonit, That doesn't cut it! They have to be darn active in seeing that things don't fall apart around us. The ball is in their court now, and it seems they don't know what to do with it. I don't really care what they personally think, I want to see what they are going to do. And so far.....

>> Gloat time is over. Your time has come. You now have the chance to
>>prove that you were right. And browbeating the losers isn't a very good
>>start.
>
>
> Maybe we'll see a lot of newcomers and technoadvances after the code test goes.
> And maybe we won't. Personally, I don't think we'll see either.

Probably not. Those who do advance the art are a small core of technical adroit's, who come up with techniques that must not only advance the art, but must be adapted by enough people to make them viable. After all, it isn't much fun to have the newest cool method of communication if there is only a couple people to communicate with.

> If that happens, what will be blamed for the ARS' perceived problems??

The PCTA's, because of their being so negative, and scaring the new people away? I'd bet a cup of coffee on that one. It is a pity when you lose someone to blame, eh?

From: Keith <kilowattradio_spam@earthlink.net>
Message-ID: <bhdphn020ov@enews4.newsguy.com>
Source record: 74514

http://www.globes.co.il/serveen/globes/docview.asp?did=714612&fid=942

The Ministry of Communications this week granted a license to Main.net Communications to test its power line communications (PLC) access network solution. The test in the Kryot area will include scores of participants, who will not pay for the service. Main.net has an understanding with Israel Electric Corporation (IEC) on the subject.

The Ham Radio Association filed an object to the test with the Ministry of Communications, claiming the use of the electricity grid for communications would disrupt ham radio communications.

>I'm really not interested in rrap, or you, thanks anyway.

Then why are you posting here?

>I don't mean to include all ham radio operators, and afterall, it's
>only my friggin opinion anyway.

Well, that's what rrap is all about, expressing our opinions. However, there are a lot of people who will respect an opinion - even one they disagree with - if the person expressing it feels strongly enough about what they're saying to let others know who is saying it, which by extension means it's a legitimate expression of an opinion rather than some anonymous troll trying to stir up the hornets' nest. There are exceptions, of course - some people just don't have enough pride in themselves to care how much of an imbecile they look like in front of the rest of the world - but generally this has shown to be the case. As for not meaning to include all ham operators, that's good, but your comments about the code test were directed to *me* in that you posted them in a reply to a message that I posted...and if you trouble yourself to check, you'll see that I've been posting in favor of doing away with the code test for, oh, about six years now.

>I've used the same NSP and ISP for years and years, my email is
>valid too (remove nospam) So in your opinion, don't trust anyone
>on Usenet, without a callsign?

See the above.

What troubles me is this: You claimed to be a "coded Tech" and yet here you are griping about code testing. To me, this doesn't add up. If you've already passed the code test, then as long as you hold onto the CSCE and keep your license current, you no longer have to worry about it. The next step for you is to pass Element 3 and upgrade to General. Your tone suggests to me that you haven't passed a code test. Now, if you had posted your call like many (most) of us here do, I could have checked on QRZ and removed any such suspicions. As things stand, I and the rest of us here in rrap have to wonder, under the circumstances, if you even have a license at all. No license is required for posting here, but if you are indeed a ham - regardless of your license class - then be proud of that fact ande have the courtesy to let the rest of us know who we're talking to, that's all.

>The first sign of a blow hard, spelling and grammer corrections.

>of smoking crack?

That was giving you the benefit of the doubt, actually.

>Sorry, you sound like an N8WWM type person. I hope you're not. :)

No, I'm a KC2HMZ type person...whatever that means. Bottom line, though, is that if you want to retain any credibility here (which I'm not sure you care to do) you might consider following the thread and noticing who's on which side of an issue before you go spraying folks who happen to agree with you (like me) with shots intended for folks who disagree (like you did to me the day before yesterday). Or are you just trolling rather than trying to make a point here?

The AOL screen name of "Avery Fineman" is still registered to me.

I have, currently, six other screen names at AOL (including this one) but "Avery Fine" was NOT one of them. Never.

Yes, I've used the screen name of "Avery Fineman" in here and also identified myself at the end of the post.

Apparently some in here are terribly uptight and can see no humor in the pseudonym of "a very fine man" that lacks two spaces. :-) I used that pseudonym first about 1992 on a Bulletin Board System as Co-Sysop. "Len Over 21" came from the pseudonym used on the BBS US Pompeii a year later (run and sysoped by Stan and Zippy Manus in the Hollywood Hills). It is word play based on the BBS software...takes too long to explain to anal-retentive control freaks. :-)

I can't "prove" who "Avery Fine" is...but both you and Reverend Jim are prolific posters from AOL. Coincidence? :-)

>impact on anything "radio" related at all.

I have NO desire to "go back to Japan of 1953" since I was there then and up until 1956. It was interesting. The task was challenging and interesting and I met that and succeeded.

I had NO "glory and greatness" at Ham Radio magazine, was just a contributor and an Associate Editor. Interesting and challenging again and (from the compensation) little more than an extension of ongoing hobby activites.

I was never employed by Raytheon. Raytheon's old Santa Barbara, CA, division came up with the RadaRange, the progenitor of today's ubiquitous microwave oven. Raytheon sold all the rights to that to Amana Corporation of Amana, Iowa. My wife and I visited there

in 2001, two years after buying an Amana natural gas range and overhead microwave oven and vent fan for a complete makeover of our kitchen in 1999.

pSycho pSteve seems lost on the concept that I actually DID what I've said I did...and have the documentation and still-living witnesses to that fact. All pSycho pSteve can do is attempt character assassination for his own aberrated ends...he NEVER had anything to compare with that.

Poor thing.

That is a good film (few of Redford's films are "bad")...but it is
entirely FICTION.

Some in here (some time back) tried to use another movie,
"Independence Day," as some kind of backing for the glory and
greatness of morse code. A decidedly FICTIONAL story. :-)

> My point is that I see a close relationship between that ending and the

>situation we have here. No real thought has been given to the aftermath
>of the ending of the Morse code test.

Is that a "problem?"

It would seem that you are just setting the stage for more False
Charges to level against the NCTAs.

You need a better stage manager.

> After such a change, lots of different ideas come out of the woodwork
>to replace the vacuum left by the probable disappearance of the Morse
>code test. Some ideas are good, some make me shudder.

There's NO "problem." Try not to manufacture one.

The only "problems" have been put forth by PCTAs, some of whom
"predict" the doom of amateurism due to loss of the code test.

There's NO sign of that.

There IS a lot of weeping, wailing, and whining by those who had to
jump through the morse hoops in order to get their rank/status/title/

priveleges in a hobby activity. Most of those few are totally pissed
and become overly antagonistic in here.

> But the fact is that since if the test disappears and nothing else
>happens, it very well does mean that it is a reduction in knowledge
>required to get a ticket.

No, that is a biased PRESUMPTION on your part.

Morsemanship is NOT "knowledge." It is a skill, not a "knowledge."

It is an outmoded skill, no longer applicable to the modern world or
the future.

>All arguments on what constitutes "knowledge"
>in these regards is kind of like defining "is".

Not at all. Amateur radio is the ONLY radio service in the USA that
requires demonstrated cognition of morse code for a license having
below-30-MHz privileges.

Morse code skill has been steadily declining in lawful use of HF and
lower by most national administrations.

>You have to learn less, no possible dispute without looking pretty silly.

Refusal to accept factual data looks even sillier.

You are on record as refusing to accept arguments against elimination
of the morse code test. You thus join the ranks of all the other PCTA
"sillies."

> All this means that those who believe that requirements for a ticket
>should be lowered have the upper hand.

No, it just means that the PCTA are still weeping, wailing, and whining
that no newcomer need go throught their initiations long ago.

Poor babies.

> Those who do not believe that, that is to say that a Morse code test is

>a desirable thing, or those who want the writtens to be reflective of a
>fair degree of competence, have an uphill battle, and at the moment are
>regarded as the losers.

Only by the PCTA....for obvious reasons.

Morsemen seem to regard themselves as gods of radio because of
their claimed "knowledge" (really just another skill). That's even
sillier.

> I am very disappointed that the winners in this one do not seem to have

>any plan at all. All we hear are their personal thought on how *they*
>don't support some of what is being proposed.

A future with change must be terrifying to you. Accept our sympathies.

No "plan" is required...either by law or ethics or morals.

>That's nice, but Doggonit, That doesn't cut it!

Yes it does.

>They have to be darn active in seeing that things don't fall apart around us.

Oh, did you expect some kind of medicare and welfare for once
being tested for morsemanship?

Just how did you think you earned some kind of "right" to be supported
after major rules changes?

The only ones likely to make things "fall apart all around YOU" is the
weeping, wailing, whiny PCTA brethren refusing to obey regulation
changes and fighting everyone who won't see their way.

>The ball is in their court now, and it seems
>they don't know what to do with it. I don't really care what they
>personally think, I want to see what they are going to do. And so far.....

Once the morse code examination is completely removed from
the license examinations, I plan to stop accessing this little beeping
Din of Inequity and all its weeping, wailing, and whiny PCTAs.

The FUTURE is the next fraction of time from right NOW. "Today is
the tomorrow you worried about yesterday."

Preservation of the status quo is nice, safe, convenient, and relatively
free of worry. All the rules, regulations, etc., remain as they were and
those who met the challenges of old have achieved to old title, rank,
status, and privilege can brag about it and make themselves "superior"
to those who didn't.

The future can be terrifying to those who NEED the old ways to make
them "superior" to others. If they lose all that status, rank, title, and
privilege, they can't claim any "superiority." That LOSS is a tragedy
to them and they need something, anything to give back their
"rightful superiority." You can see it in here right now.

CHANGE HAPPENS. Accept it or die. Simple Darwinism.

You have NO "right" to continual support for PAST "superiority."

The future will work itself out. It has in the past.

>What I wrote was precisely relevant.

Radio gods have the irritating habit of stating that only THEIR
viewpoints are "relevant." :-)

>You wrote of someone's having not
>been alive when something took place. I pointed out that you weren't
>alive during some of the things which you've pontificated on in this
>venue.

Now, now, Kolonel...you're busy trying to divert attention to someone
else by saying you are "relevant" and anyone disbelieving such a
godlike statement is "irrelevant."

You are worse than the other whiny PCTAs who want to "win" old
arguments that they LOST in here.

>> Try reading a BOOK on the REST of the world of radio instead of what
>> if spoon-fed you by the little publisher in Newington.
>
> "YOU have NO authority to call anyone anything, demean them,
> make fun of them, or anything else...yet YOU continue to do so.
> That indicates the perversity of your control-freak psychosis."
>
> --Leonard H. Anderson

...and you still don't have any of that authority, divine radio god.

>What the hell are you prattling about?

...about a whiny radio god (yourself) getting all hot and bothered
by negative criticsm and not being able to argue any subject without
attempting misdirection into personalities.

>Did you have a point?

Yes. But, like Reverend Jim, you can't accept it even though everyone
else (except fellow PCTAs) can see it for what it is. :-)

>You certainly wrote a large number of diversionary words to cover your
>gaffe. There was no boom of Japanese ham gear in the 1960's. Is it
>clear now?

Again, you refuse to accept what was happening in the markets for
amateur radio equipment.

The Japanese companies were already IN the ham radio marketplace
in the USA then and they've occupied the prime position ever since.

>Why no, Len, not as a school boy. I certainly have more governmental
>communications experience during the cold war.

Any more tales of wondrous radio pioneering from the International
Cashew Nut exporting capital of the world? :-)

No doubt you were awarded an Intelligence Star for your James Bomb
duties getting the goods on nearby commies in other countries. :-)

>It doesn't take a regulator to truthfully state that you weren't
>involved and are not involved in amateur radio.

You mean NOT LICENSED. That's ALL you can claim. :-)

Keep up with that "charge," big radio god. It seems about the only
valid statement you can make.

>Don't tell me what I am to amateur radio.

No problem. You do that constantly about yourself. :-)

>I'm a licensed ham and have been for decades.

Which only proves that you've been able to renew that license
periodically and within the legal time. :-)

You should also describe the stamping on your hide from the FDA.

>You, quite truthfully are not involved at all in amateur radio.

Well then, HAM RADIO magazine made some dreadful errors in
personnel, did it? :-)

You ought to bring up outright charges of fraud and misrepresentation.
Psycho pSteve does that periodically. Of course, he can't understand

any of the article's technical things so he just says they are "forgeries."

>You aren't a judge of what hams do or have done.

Real hams sometimes contain unsafe amounts of Escherichia coli
O157:H7. Be careful of infecting others when spouting off in here.

>You are not a regulator.

Neither are YOU, big radio god.

>> Now tell us, great big four-decade experienced AMATEUR radio god,
>> what have YOU ever done to "advance amateur radio?!?"
>
>No, I don't believe I will, Len.

I don't believe you CAN. :-)

>> Show us your patents, your marvelous discoveries, all your >
>important technical contributions.
>
>Still have your patent fetish?

Never had any "fetish." But, I DO have a patent in radio.

>> You've had FORTY YEARS of amateurism
>> and all you can come up with is trying to put down folks in an amateur
>> newsgroup?!?
>
>Folks? Well, there's you.

You don't hesitate one bit to put down ANYONE who doesn't worship
your statements or ideals. That's clearly evident in this newsgroup
and available on Google.

>Then again, you aren't a ham. You're just a groupie.

"Ham is the butchered meat of swine."

I'm just advocating the elimination of the morse code test for ANY
US radio license examination.

>You've got it wrong, Len. I have a license and have had it for decades.

You get a nice gold star for renewing your license periodically.

Other than that, what can you claim?

>I make contacts via amateur radio daily.

I make contacts with switches and relays. Break those contacts, too.

Daily. :-)

Well, that proves the radio god's "validity." One can't get IN amateur radio without ALREADY being IN amateur radio. Know the morse code. Worship morse code. It is the key to GREATNESS!

>I don't issue catcalls from the sidelines.

You have a "license" to catcall from inside the lines?

Of course you do. "Authority" from the US government!

Your license grant "authorizes" you to be a horse's ass to anyone not in league with your godlike opinions, statements, and general personal insults.

No problem. Everyone sees that.

>> Get a better life.
>
>I'm quite happy with this one, Len. Yours seems to be a little lacking
>in light of your ham radio envy.

What "envy?"

I'm just advocating the elimination of the morse code test for radio license examinations.

You seem to think that anyone doing that is committing some kind of heresy or blasphemy.

You seem to think that ALL in this newsgroup MUST have a valid amateur radio license to participate. You don't have any validity in that demand so all you do is attempt individual personal insults.

You are still under the misconception that a valid amateur radio license is required to participate in here.

This newsgroup isn't "ham radio." It is supposed to be about talking policy matters for that. In the United States all us citizens have the absolute RIGHT to free speech under our Constitution. You won't accept that, thus you are acting unconstitutionally.

Radio gods are like that. Mere earthly laws don't apply to them.

Jimmie, that was an OLD argument in here and you LOST it.

Getting all puffed up and antagonistic won't prove any case for you on the morse code test. It won't prove any case for your false interpretation of statistics that was on the AH0A website.

You would not accept statistics of a noted PCTA taken from the FCC public database then and you refuse to accept it now. There's no point in rehashing an old argument where you LOST.

You won't make any valid "points" in here by repeating "you're mistaken" and continual refusal to accept FCC database information.

But you know Jim even if they did prepare, A LOT FAILED, it was really an exercise in who could overcome the nerves.

I had to take a 90 mile train ride to and from to take my test. I was 13 at the time, and my mother came along. We spent the night at my aunt and uncles.

Years later I realized it was the 'original incentive licensing'. He stern words were " You better pass this thing the first time, we ain't doing this again". I nicknamed her 'Old Sarge'...but never to her face.. hi. Sure do miss her.

>couple of years out there working it.

One needs to be able to copy the code in order to follow the CW
contacts during Sweepstakes, of course...and the contacts during most
contests are at a lot faster speed than I can generally copy. I can
say this, though. Of a dozen or so folks in our club who upgraded from
Tech (no-code) to General over the past year, only one actually went
on to make CW contacts on the air.

On the other hand, we had a new Tech getting elmered on the code
before the ink was dry on his new license, and he told us it wasn't
just because he wanted to learn it so he could upgrade but that he's
actually interested in using the mode on the air.

I think the conclusion one can draw from this is that there are,
indeed, new hams interested in using CW, although most aren't.
Admittedly a dozen or so isn't a very large sample, but this is the
experience we've had here over the past year.

>It's probably a combination of all the above. However I've known several
>new hams who are fascinated by the mode and see the CW contests as a way to
>both master the mode and have fun.

In my case, they've been a way to become both humiliated and
frustrated. But, other folks' mileage may vary.

Don't take old Airy to heart - he suffers from delusions of adequacy, and
makes up for it by being as obnoxious as possible. In his own little
world, nothing happened on September 11th 2001, apart from someone making
a valid disagreement with American policy. At least when he's on his PC,
where everything is handmade, he's not roaming the streets causing real
damage.

John> you even have a license at all. No license is required for
John> posting here, but if you are indeed a ham - regardless of your
John> license class - then be proud of that fact ande have the
John> courtesy to let the rest of us know who we're talking to, that's
John> all.

What troubles *me* is this:

1. Posters here see inconsistency where it doesn't exist.

There is no reason for a 20wpm Extra or a 5wpm Extra to support
code testing just because they passed it. I am a 5wpm Extra, and
I feel that the treaty was the only reason to maintain the test.
I wanted the license bad enough to pass the test, so I passed.
That doesn't mean I think that everyone else should. Trying to
read whether or not someone has passed the code test by their tone
is foolish, and wrapping the entire newsgroup under your "have to
wonder" umbrella is just foolish, which leads me to...

2. Posters here look down on those who post without callsigns.

Your comment that hams should "be proud" of their license is
foolish, but not as foolish as your justification for callsign
posting expectations -- "have the courtesy to let the rest of us
know who we're talking to". This thing we're using is called
"Usenet". It's been around for a long time, and the primary
technical form of identification for posters is something called
an "email address". It is also traditional to include one's real
name or a pseudonym, often in something called a "signature" which
is appended to their posts. I am using Dr. Evil quotes to make a

point. If you haven't figured it out yet, here it is again from another direction. If I were calling CQ on 80 meters and using my email address, you'd be unimpressed. Someone out there could easily Google my email address to find out my name and other information and then search the FCC database to find my callsign and license class, but that's not an acceptable defense for not using the proper and traditional identification methods. My callsign shows up in approximately seven Usenet posts across three newsgroups, none of which include this group. When I speak here, I address myself as I wish to be addressed, which is by those forms of identifications, formal and traditional, that are appropriate to this media. The headers of my posts even include suggested attributions for replies to my posts. The lack of a callsign in my posts doesn't negate the value of what I type. It frankly isn't relevant to any posts -- my license class is relevant to some posts, but not many -- so I don't see any need to include that information.

These comments aren't solely directed at you. You just wrote a post that pushed two of my buttons. You should only take it personally if those two items are things you really personally believe.

Jack.

If I gave the impression that I meant to imply otherwise, I apologize
to N2EY. There are numerous Q-signals that were originally for
aeronautical use, back when CW was used for communications with
airplanes. I was just pointing out that they aren't used anymore.
Comms between aircraft and from air-to-ground are in AM mode. No need
for q-signals there, and as I say, the ATIS tells the flight crew
which runway is in use anyway.

Well, Jack...I dunno how long you've been reading this NG, but I've
been here long enough to have noticed some patterns in other people's
posts. One of them is that trolls from rec.radio.cb who come here to
whine about code testing never post a callsign, frequently post
anonymously using a phony e-mail address, and post messages with a
tone that makes their agenda obvious to even the most casual of
observers. If you think that such reading between the lines is
foolish, you're entitled to your opinion. My opinion is that, rather
than foolish, I find it a useful tool for determining which posters
are interested in a serious discussion of an issue and which are
merely trolls that aren't worth wasting the time to reply to.

In the case of morphoholic, the issue isn't what his license class is, but whether or not he even HAS one. He claimed to. Anyone can claim to have a license. That doesn't mean that he or she does actually have one. This is a ham radio related newsgroup. Hams know one another by our calls, not our e-mail addresses or x-trace info or other server junk that goes into the headers on a usenet message. Most of us here like to know who we're talking to...and, being hams, we do that by callsign. I think you'll find plenty of regulars here who will agree with that.

>These comments aren't solely directed at you. You just wrote a post
>that pushed two of my buttons. You should only take it personally if
>those two items are things you really personally believe.

No, I don't think I'm taking it personally; however, as I said, I think you'll find that many of the regulars here will agree that, this being a ham NG, there's a certain courtesy with posting your call to let others know who they are dealing with. If you choose not to do so, well, okay...you're not posting messages that border on trollism. If you were, I wouldn't be wasting my time with a reply. ;-)

I don't really think anyone gives a rat's behind, Leonard. I most certainly do not.

Why do you use pseudonyms at all?
>
> I can't "prove" who "Avery Fine" is...but both you and Reverend Jim
> are prolific posters from AOL. Coincidence? :-)

Yes. There are several prolific posters here with AOL accounts. You are easily the most prolific poster here.

And you have an AOL account. ;-)

And you say you have at least seven screen names. ;-) ;-)

Coincidence? I think not. ;-) ;-) ;-)

Of course.

Morse code was used in aviation from the earliest days until at least the
1950s.
Of course that's all gone now except for some range markers.

>That's a relic from days long forgotten.

Gone, but not forgotten. Some years back I read an article in "Air and Space"
by someone who had been a commercial aviation radio operator in the '50s and
who had used Morse in that job.

> Today they get that info from
>ATIS before they even contact approach control.

Of course.

Didja know that there used to be questions on the common Q signals on the
written tests?

Then if you are so sure FCC has no more "monitoring" stations, park in front
of the above referenced location and throw a 500 watt dead key. After all,
since
you know so much about the FCC, there is no danger of getting
caught--especially from that
location,.....

Right?

The only person I see getting puffed up and antagonistic is you, Len.

>
> You would not accept statistics of a noted PCTA taken from the
> FCC public database then and you refuse to accept it now.

What are you talking about?

In 1991, all Technicians were code tested.

In 2000, most Technicians were not code tested.

200,000 Technicians who were not code tested in 2000 is somewhere in the ball park. Nobody denies that in 2000 there were a lot of Technicians who had not passed code tests.

However, you claimed:

"Had the no-code-test Technician never been created, US ham radio would have been short by 200K ham licenses by the time of "Reconstruction.""

Reconstruction?

The only way we'd be "short" 200,000 is if none of the 200,000 got licenses. Did your crystal ball tell you that none of them would have learned the code?

> There's no point in rehashing an old argument where you LOST.

Ah, I see. You're using the Big Lie technique, where you simply claim to have "won" without presenting any proof or even any evidence.
>
> You won't make any valid "points" in here by repeating "you're
> mistaken" and continual refusal to accept FCC database
> information.

I'm not after "points". Just the facts. But you don't have any facts to back up your claims.

You can repeat the same mistakes over and over but they'll still be mistakes, Len.

<w4nti@NOSPAMmindspring.com> writes:

>But you know Jim even if they did prepare, A LOT FAILED, it was really an
>exercise in who could overcome the nerves.

My sources tell me that the pass rate has been about 2/3 for years and years. I don't know how true that is. I do know that it's a good thing the exam sessions are more accessible than in those times.

I recall that one of the major complaints some hams had about incentive licensing was the travel expense and time. Something like 1/6 of the ham population back then were Conditionals. Something like 1/3 of the hams of the '60s had never been to an FCC office exam (Novice, Tech and Conditional were all by mail). None of the IL proposals included making the Advanced or Extra available by mail.

For my money, the *best* system was that of the late '70s and very early '80s. FCC examiners did all the testing and exam preparing, and there were office sessions. BUT, if a ham group could guarantee a certain number of folks wanting tests (I think the quororm/minyan was 10) then FCC would send out an examiner. Most big hamfests had the FCC "traveling road show" giving exams.

Reagan's budget cuts ended all that.
>
>I had to take a 90 mile train ride to and from to take my test. I was 13 at
>the time, and my mother came along. We spent the night at my aunt and
>uncles.

That's why I said I was lucky. At 13 it was a mile walk to K3NYT's house for the Novice, and at 14 a subway ride. Nobody went with me, but those were different times.

And since we were school kids, we were used to taking tests.
>
>Years later I realized it was the 'original incentive licensing'. He stern
>words were " You better pass this thing the first time, we ain't doing this
>again". I nicknamed her 'Old Sarge'...but never to her face.. hi. Sure do
>miss her.

I hear ya!

I recall that the Philly office gave exams on Monday thru Wednesday, and I think there were no code tests on Wednesday. There was no way a kid would be allowed to miss school for a ham exam back then. So all testing had to be done in the summer, or over Xmas break if the holiday didn't fall on the wrong day. With the 30 day retest rule and school getting out in mid-June, there were at

most three chances per summer or four chances per year - tops.

You did. It's all in Google. You just flat-out REFUSED to consider
the FCC's own database information (as compiled by a PCTA) and
wanted to hide 9 years worth of New Licensees.

>> Getting all puffed up and antagonistic won't prove any case for
>> you on the morse code test. It won't prove any case for your

I did, but trying to present FACTS back then was useless when you
refused to accept them. You still refuse to accept such facts. Not
worth the trouble to go back through the past over and over and over
again.

>You can repeat the same mistakes over and over but they'll still be mistakes,
>Len.

See? There you go once more. You won't accept any truth that is
against your viewpoint. You call all of such things "mistakes." :-)

"You have met the enemy and dey is you!"

Not really. It's a nice wood-frame single-story, 3 bedroom, 2 bath, 2000 square foot house on a third of an acre. New roof and new exterior paint as of two months ago. Market worth about $375,000 right now...paid all of $30,500 for it 40 years ago. :-)

The soil in this neighborhood is decomposed granite so there are lots of rocks in it. Big ones, a few. You are correct in that assumption. They make nice decorations in the flower planters.

No need to "toss rocks" around...the PCTAs in here are too busy doing that, along with brickbats and usual demeaning filth...at others and themselves. :-)

It's always cheering to know that the Amateur's Code is alive and well and all the morsemen are respecting others. NOT.

Oh, my, you love the past. :-)

I bought my first PC from a former TWA radio operator, John, who
managed ComSoft in Sun Valley, CA. He was selling computer
stuff because he'd been downsized from international flying long
before. Just a block from the intersection of San Fernando Road
and Vineland. John and his Dragon Lady retired years ago, a victim
of capitalism, unable to compete with CompUSA and Fry's Electronics.

Nice guy, told a lot of stories. Of flying, not about morsemanship.

Not at all, Mr. Bluster. I wrote nothing about MY being relevant. You
chastised another for making a statement about something which took
place in the distant past. You make similar statements quite
frequently.

> You are worse than the other whiny PCTAs who want to "win" old
> arguments that they LOST in here.

Which old arguments were lost? Why are you attempting diversion just

You're all about misdirection and personalties, Len. Your bluster isn't
going to accomplish much.

> >Did you have a point?
>
> Yes. But, like Reverend Jim, you can't accept it even though everyone
> else (except fellow PCTAs) can see it for what it is. :-)

Everyone else? We haven't heard from everyone else. Are you claiming
chortle prescience?

> >You certainly wrote a large number of diversionary words to cover your
> >gaffe. There was no boom of Japanese ham gear in the 1960's. Is it
> >clear now?
>
> Again, you refuse to accept what was happening in the markets for
> amateur radio equipment.

I refuse to accept your claim because it is incorrect. You don't know
what you're talking about.

> The Japanese companies were already IN the ham radio marketplace
> in the USA then and they've occupied the prime position ever since.

There were a very few Japanese transmitters and receivers in the very
late 1960s. There was no boom of Japanese equipment in the 1960's. The
Japanese weren't even in the "prime position" in the mid-1970's.

> >Why no, Len, not as a school boy. I certainly have more governmental
> >communications experience during the cold war.
>
> Any more tales of wondrous radio pioneering from the International

Why? Are you folks in the International Nut capital of the world in the
market for more? :-) :-)

> No doubt you were awarded an Intelligence Star for your James Bomb
> duties getting the goods on nearby commies in other countries. :-)

Then again, you wouldn't be in a position to know anything about it. :-)

> >It doesn't take a regulator to truthfully state that you weren't
> >involved and are not involved in amateur radio.
>
> You mean NOT LICENSED. That's ALL you can claim. :-)

I mean "not involved". You have nothing to do with amateur radio.

> Keep up with that "charge," big radio god. It seems about the only
> valid statement you can make.
>
> >Don't tell me what I am to amateur radio.
>
> No problem. You do that constantly about yourself. :-)

Actually I haven't done much of that here but I'd be entitled to do so.
I am, after all, a licensed radio amateur. I'm a part of amateur radio.
You, on the other hand... :-)

> >I'm a licensed ham and have been for decades.
>
> Which only proves that you've been able to renew that license
> periodically and within the legal time. :-)

I've passed four different written exams and morse exams at three
speeds. I took and passed all the exams they had, Len. You've not even
attempted the most basic, despite your "decades-long interest".

> You should also describe the stamping on your hide from the FDA.

You write some pretty peculiar things.

> >You, quite truthfully are not involved at all in amateur radio.
>
> Well then, HAM RADIO magazine made some dreadful errors in
> personnel, did it? :-)

How long has it been since there was such a magazine? Yes, I agree that
HAM RADIO magazine made at least one dreadful error in personnel.

> You ought to bring up outright charges of fraud and misrepresentation.
> Psycho pSteve does that periodically. Of course, he can't understand
> any of the article's technical things so he just says they are "forgeries."

I don't know about fraud but you've certainly been guilty of
misrepresentation here on a number of occasions.

> >You aren't a judge of what hams do or have done.
>
> Real hams sometimes contain unsafe amounts of Escherichia coli
> O157:H7. Be careful of infecting others when spouting off in here.

Nice dodge.

> >You are not a regulator.
>
> Neither are YOU, big radio god.

I have no need to be. I'm quite happy to be active as a licensed radio
amateur. I'm one-for-two. You're oh-for-two.

> >> Now tell us, great big four-decade experienced AMATEUR radio god,
> >> what have YOU ever done to "advance amateur radio?!?"
> >
> >No, I don't believe I will, Len.
>
> I don't believe you CAN. :-)

I'm sure it'd be something like your line about Steve: You wouldn't be
capable of understanding. :-)

> >> Show us your patents, your marvelous discoveries, all your >
> >important technical contributions.
> >
> >Still have your patent fetish?
>
> Never had any "fetish." But, I DO have a patent in radio.

It sure seems like a fetish. I can Google up a number of occasions
where you bring up the existence of your patent while asking others, "Do
YOU have a patent"?

> >> You've had FORTY YEARS of amateurism
> >> and all you can come up with is trying to put down folks in an amateur
> >> newsgroup?!?
> >
> >Folks? Well, there's you.
>
> You don't hesitate one bit to put down ANYONE who doesn't worship
> your statements or ideals. That's clearly evident in this newsgroup
> and available on Google.

I don't require worship, nor do my ideals. That's another
misrepresentation on your part. That is clearly evident without a trip
to Google.

> >Then again, you aren't a ham. You're just a groupie.
>
> "Ham is the butchered meat of swine."

Then you're in the wrong newsgroup.

> I'm just advocating the elimination of the morse code test for ANY
> US radio license examination.

You've never "just" advocated. You've always done the things of which you frequently accuse others. You want a minimum age requirement for entry into amateur radio. When others have argued that no age limit is needed, you've come close to apoplexy and the capital letters fly as you've typed "CHILDREN" As to the elimination of morse testing: What's it to you?

> >You've got it wrong, Len. I have a license and have had it for decades.
>
> You get a nice gold star for renewing your license periodically.
>
> Other than that, what can you claim?

I can and do claim that 1) you don't hold such a license 2) you aren't a part of amateur radio 3) that your credibility here on the code test issue is almost non-existent.

> >I make contacts via amateur radio daily.
>
> I make contacts with switches and relays. Break those contacts, too.

I'll bet you could break anything.

> Daily. :-)
>
> >I'm a participant in amateur radio.
>
> Well, that proves the radio god's "validity." One can't get IN amateur
> radio without ALREADY being IN amateur radio. Know the morse code.
> Worship morse code. It is the key to GREATNESS!

One can get in quite easily. You haven't taken the first step toward obtaining an amateur radio license of any class. You can't blame others for your own inertia.

> >I don't issue catcalls from the sidelines.
>
> You have a "license" to catcall from inside the lines?

I'm in the game, not on the sidelines. I'll be happy to dish out all the catcalls you can handle.

> Of course you do. "Authority" from the US government!

Not from the sidelines. If you'd develop a more positive outlook, you could be one of our cheerleaders.

> Your license grant "authorizes" you to be a horse's ass to anyone not
> in league with your godlike opinions, statements, and general personal
> insults.

Which simply makes you an unlicensed horse's ass.

> No problem. Everyone sees that.

Everyone? You have an ARRL study guide in your pocket?

> >> Get a better life.
> >
> >I'm quite happy with this one, Len. Yours seems to be a little lacking
> >in light of your ham radio envy.
>
> What "envy?"

You know. Your envy.

> I'm just advocating the elimination of the morse code test for radio
> license examinations.

Naw. You know in your heart of hearts that it just isn't so.

> You seem to think that anyone doing that is committing some kind of
> heresy or blasphemy.

Not at all. I don't think you know the first thing about it.

> You seem to think that ALL in this newsgroup MUST have a valid
> amateur radio license to participate. You don't have any validity in
> that demand so all you do is attempt individual personal insults.

I don't think that at all. You've commented here for years. You've
dropped road apples of insults on numerous individuals who don't happen
to agree with you. Then you get sore when the insults come your way.
You tell others about how tough newsgroups can be but you, the little
old pirhana, can't take it.

> You are still under the misconception that a valid amateur radio license
> is required to participate in here.

You are still under the misconception about what I believe.

> This newsgroup isn't "ham radio." It is supposed to be about talking
> policy matters for that. In the United States all us citizens have the
> absolute RIGHT to free speech under our Constitution. You won't
> accept that, thus you are acting unconstitutionally.

More road apples. I'd give you some oats but you're the wrong end.
The constitution does not require my silence or force any deference
toward your views. It does not prohibit my laughing at you or my
sarcasm directed toward you. You may unwrap the flag and stand down
from your soapbox.

> Radio gods are like that. Mere earthly laws don't apply to them.

You can't even make up your mind if I'm a god or not.

Are you insulted by a truthful statement? Do you find the fact that you
have no amateur radio license to be insulting? What does morse code
testing or an age limit in amateur radio licensing have to do with you?

> >Have you
> >made up your mind yet. Some time back you stated that I wasn't a radio

I do have some expertise in amateur radio and I have decades of
experience. That something grates on you doesn't make it a pretense.

> It would seem that your PRETENSE has made you very tense
> (and angry) when someone shows your pretense for what it is. :-)

I'm not angry, Leonard. I'm actually smiling as I write these words:
You haven't shown anything to anyone when it comes to amateur radio.

Hee! I was brought up in the same area where Jim lived, the FCC office
was only a trolley & an elevated ride away so neither of us had to
walk ten miles uphill both ways in blizzards to take the exams.

My Mom was brought up under well-heeled circumstances and had an older
brother whom she often referred to as a "ham radio operator". I never
met him because he passed away young around 1922 long before I was
born. He had a whole room full of radio gear and had, as she explained
it, the "first radio tubes in town". I suspected for a long time that
he was an SWL type, not a ham.

Time marched on and it got to be time for me to take my Novice exam, I
was 15-16 and roamed the rails at will by then. I told Mom I was going
downtown to take the gummint test to become a ham radio operator.
"That's nice dear, I don't remember Joseph taking a test though. Be
home for dinner" and that was the end of my folk's involvement to that
point. Until I actually got on the air and tore up every TV set on the
block. Then it became "Joseph didn't do that, turn that thing off!"
Oops. Thus it was that I became the "80M Midnite Stalker", I only got
on the air after midnite when the TV stations were broadcasting test
patterns and/or shut down.

We have a nickname for our Mom too. She has four sets of X-Ray eyes, can hear whispers six blocks away and has radar the Navy would kill for. We got away with *NOTHING*. The best way to get any of her ten grandchildren back in line was to threaten to call Spooky Old Alice and have her swoop in on her broom and deal with them. OhYeah it worked! So for decades now she's been known universally as The Spook, or just "Spook" or "Spooky". Her e-mail address was spook@dvol.com. She'll be 90 in a couple weeks. She spends a lot of time in what we call "Alice's World" these days but she's still kickin'.

I know this is off the subject, but feel I will get a 'good answer'
here. I am wondering if it is possible (is there a program like this)
to send emails to cell phones from my computer 'on' the net????
My son in law has a business cell phone, (Seattle) and there are times
when I would like to ''''just send a question'''', NOT use up his
business 'time', I hope I am making sense. Thanks in advance. cl.

There was another side to that coin, "access abuse". We had a nitwit
who took the Novice test at least four times. Each time he took the
test his score went up a bit. He figgered that if he took it often
enough he'd eventually pass. Which he did.

> For my money, the *best* system was that of the late '70s and very early '80s.

Din do any good. There's a piece in one of his autobiographies about
the day he got a report on how, after all his attempts to reduce the
gummint head count, the head count was up 10% from the previous year.
Whereupon he went off on what has been described as probably the most
"colorful" half hour rant to ever originate in the Oval Office.
Followed by an admotion to his successors in that office to not expect
to have any control of the gummint, "It has a #$@!xF# life of it's
own!"

> happens, it very well does mean that it is a reduction in knowledge
> required to get a ticket. All arguments on what constitutes "knowledge"
> in these regards is kind of like defining "is". You have to learn less,
> no possible dispute without looking pretty silly.

Sure. But that's been going on for decades now. Some folks would even
say it is justified because a ham doesn't have to know as much today
to get on the air and avoid breaking the rules.

For example: How many hams do you know who use barefoot rigs that
require tuneup in order to operate properly? (Not the ATU - the rig
itself). Besides me, that is.

How many do you know who regularly use 100% homebrew stations?

Etc.
>
> All this means that those who believe that requirements for a ticket
> should be lowered have the upper hand.

Been that way for decades.
>
> Those who do not believe that, that is to say that a Morse code test is
> a desirable thing, or those who want the writtens to be reflective of a
> fair degree of competence, have an uphill battle, and at the moment are
> regarded as the losers.

Not by everyone.

Looking back on the history, however, shows that license requirements
are only one factor - and probably not as major a factor as some would
have us believe. What really matters is the interest and drive of the
person involved. Some people will learn just enough to pass the test
and then shut down, forgetting most of what they "learned" in a short
time. Others will go far beyond the test levels. It's all a choice.

"Radio" and "electronics" are such wide-ranging subjects that nobody
can be an expert at all of it. Or even most of it. The repeater expert
may be in the dark about wire antennas. The digital folks may be
helpless with power supplies. And even the most knowledgeable "radio
professionals" can be utterly clueless about the practical aspects of
amateur radio.
>
> I am very disappointed that the winners in this one do not seem to have
> any plan at all.

Actually, some of them do. For instance, here are some gems from Fred
Maia, W5YI:

- Outlaw all forms of amateur bulletins and one way information
transmissions, INCLUDING CODE PRACTICE, below 30 MHz (1995 petition to
the FCC)

- Reduce the entry level license to a 20 question written and include
voice privileges on the bands above 20 meters

Here are some others I've seen, by various others:

- Institute an age requirement of 14 years as the minimum for any
class of amateur license

- Eliminate all subbands-by-mode

- Reduce the number of license classes to one all-privs license.

- Reduce the number of license classes to two - entry and all-privs.

You get the idea.

> All we hear are their personal thought on how *they*
> don't support some of what is being proposed. That's nice, but Doggonit,

> personally think, I want to see what they are going to do. And so far.......

What you're seeing is what I call the "Zen method of design", where
they will never tell you what they want, only what they don't want.
>

> advance the art, but must be adapted by enough people to make them
> viable. After all, it isn't much fun to have the newest cool method of
> communication if there is only a couple people to communicate with.

BINGO!

Which means that the advance must be publicized, affordable, and offer hams something they want.

Example: Cecil, W5DXP, used to rave about PACTOR-2. I started to look into it, and discovered that (at the time) implementing it required not just a shack computer but a $600 dedicated PACTOR 2 box. Which explains why so few hams use the mode, compared to, say, PSK-31.

> > If that happens, what will be blamed for the ARS' perceived problems??

> The PCTA's, because of their being so negative, and scaring the new
> people away?

"Negative"? We're not "negative" - we're FOR something!

> I'd bet a cup of coffee on that one. It is a pity when you
> lose someone to blame, eh?

'zactly. But you'll never sell that one.

Meanwhile, the real challenges don't get the spotlight. Like CC&Rs - what good are licenses if we cannot put up effective antennas?

It's called SMS, short messaging system. Cingular charges me $.10
for each message sent or received. You can send them from your phone,
or from the provider's website.

Your right...the Chinese are the real threat in this world, at this time.
But how do you think the USA is going to demise? And you think it will NOT
effect England? You sir are a world class fool.

Oh and BTW. The USA may indeed 'meet its match'....but keep this under your
high hat mate......we have over 9000 nukes looking for a target. And since
we are the ONLY country to use them against a civilian population, we will
damn sure do it again. In otherwords, sir, we will draw enough blood to
make our enemies hurt beyond words.

Oh and let the ragheads keep up their crap and we will turn the entire
middle east into glass.

Thanks, we are doing splendidly...

If there was ever a "fellow man" that required being killed, it is Saddam... If you folks would have done the same with 'ol Hitler, it would have saved a lot of problems before they got out of control. We aren't about to make the same mistake again... Saddam will end up like Mussolini - but BEFORE he has a chance to cause too much trouble for us.

BTW - if you don't like it - TOUGH SHIT.

Go Yankees.

Why? Farnsworth exists as the de facto "code" exam, even though the
FCC documents specify Morse Code. Yet the FCC documents DO assign the
exact same priveleges to Carl that they do you, yet you insist on
arguing it.

That would make you a fool.

DICK, there are weeks and weeks of your own postings documenting your
problems with PSK, and you certainly didn't learn it in less than 30
minutes. Sorry, but continued denial only makes you the liar.

Don't blame me for your inabilities and/or lack of hard work. After
all, I'm told that amateur radio isn't for everyone.

> modes on bands from 1.8 through 432 MHz.

Why did you stop at 432 MHz? Even most store bought amateur UHF rigs
are capable of going up to 450 Mhz.

Oh, uhhh. Forgot. Superior Heil "doan do FM (tm Kelly)"

> > I can go on and on without ever

Grates on you, huh?

Some people learn faster than others. Look at everyone's vastly different learning experiences with Morse Cose to see what I mean. Some are never able to learn it at all.

But with respect to radio theory and ops, perhaps Len is a quicker learner than you. Perhaps not.

You tell me everyone if learns the same, and if so, I'll have to give you this one. Unless Len actually has more than just the three years RF experience that you reference.

And what of education? Can education play a role in knowledge?

Gee David, someone posting as Avery Fine is sure doing a ringer impression of you.

What could it mean?

What doest it have to do with the FCC's "may share space" document?

> That would make you a fool.

I'd guess the fool to be one who is asked about a regulation about
"sharing space" and responds with some nonsense about the Farnsworth
method of learning morse.

> > > > He's allocated the same frequencies. He may or may not share the same

Incorrect, Farnsworth. I do know and I provided the answer.

It most certainly was.

> Was it capable of only working over oceans, or could it work over land > masses as well?

I wasn't simultaneously living on both coasts, Brian. Try to figure it
out.

> > I was "intimately" involved with HF military communications, working

> Of your own choosing, right?

What's the difference for purposes of discussion? Do you know anyone
who ever worked 24 hour days for a solid week?

> Were you an "Air Force of One?"

Does my statement read as if I was. I pulled eight hour shifts and the
station was open 24/7. Figure it out.

> > I was "intimately" involved with in-country HF military operations for a

Read it again and perhaps you'll figure it out.

> > I've spent forty years as an active radio amateur, operating various
> > modes on bands from 1.8 through 432 MHz.

Aren't you going to ask me if this was military communications or State Department communications?

> Why did you stop at 432 MHz? Even most store bought amateur UHF rigs
> are capable of going up to 450 Mhz.

Weak signal work on SSB and CW takes place in that area of the band. That's where I happen to spend much of my time. Is that all right with you?

> Oh, uhhh. Forgot. Superior Heil "doan do FM (tm Kelly)"

I have a 440 rig at home. I use it occasionally. I use 2m FM regularly. Looks like you've struck out on your attempt to hit a nerve, little electrolyte.

> > > I can go on and on without ever

>denies that Shannon's work has anything to do with ham radio ...
>Dick is scared to death that modern digital communications
>(that he obviously isn't capable of comprehending) will ultimately
>supplant his beloved Morse ... which appears to be the only thing
>in ham radio at which he can claim true proficiency.

>Simple version: Dick can't face the fact that his only "claim to
>fame" (as in "a legend in his own mind") is irrelevant except as
>a recreational activity.

I don't *claim* to have a claim to fame, Carl,I'll leave that for
clowns like you.

I'm rather sure that I'm not the only reader here who finds it very
revealing that while you and Frozen Floyd expound and glorify the
virtues of an all-digital ham radio "sometime in the future"-you do
continually insist that digital *is* the future-it is *I* and a few
others like Larry,who actually are on the air USING advanced digital
modes, along with a few which aren't so recent,like HELLSCHREIBER.

ALONG WITH cw.

What this shows to all is that what you actually are is all talk and
no walk, Pal. Show and tell but don't ask me to do it. Yeah.

Oh, yes, you did actually use a little AMTOR when you had a boat.
Hey, we all gotta get our mail somehow. But you abandoned it when the
boat went. Meanwhile
I have to think about it a bit to add up all the digital modes I've
worked *besides* CW.

How about a little PACTOR, some CLOVER-not much, there just wasn't
but a couple other stations that I ever caught on the air running
CLOVER, but my RTTY goes back to a Teletype Corp Model 15 which was
eventually replaced with a
Commodore 16 (yep, 16K of ram, not a C-64)with a costly, for those
days, Microlog AIR-1 module. I Followed that with a Commodore 64 and a
AEA PK64 which ran several modes, really worked great on packet too,
then when MS DOS took
over the world I got a PK232,which I still have, along with the HAL
P-38 card and a bunch of other stuff that will get traded one of these
days(Heath HK232, DSP232 and a MFJ which model mumber I forget).
Then came the soundcard era, and that's where things really heated up
with
PSK31, RTTY, HELLSCHREIBER and if I could have found anyone on the air
when I was looking, I'd try MFSK-16.

Meanwhile since I/we sincerely believe that radiotelegraphy is valuable to the point that new hams should be required to get just a bit of it before being allowed to forgo *any* further required actions-they won't have to ever do anything whatever with that license, if that's their bent- you and a few other like minded who were just too lame or lazy to "do it" lay out all sorts of labels and accusations toward us, not the least of which is the clearly visible, easily-identified lie about our attitudes toward digital communications.

For once and for all-- **IT JUST IS NOT SO!!!!!*

Facts don't budge you for a moment. OF COURSE Shannon's works are quite important and I challenge you to find where I ever suggested otherwise. But for you and Frosty to insist that Shannon controls the ARS is beyond ludicrous, and it seems that everyone reading here but you two and that idiot Anderson knows it. Oh, Don't forget the village idiot Burke.
Have you actually spent any serious time trying to be a ham? Sure doesn't look like from your postings, either of you.

Shannon controls nothing but explains much.

Aren't you intelligent enough to understand what this does to your credibility? All this confirms just how much the old No Code hatred has consumed you.
No Code International, indeed!

>NOTE: I have no problem with folks pursuing Morse as a
>recreational activity

So in your view CW is the only recreational activity within the ARS.
How novel.

Cool. What amateur call sign did you use?

> > Was it capable of only working over oceans, or could it work over land > masses as
well?
>
> I wasn't simultaneously living on both coasts, Brian. Try to figure it
> out.

Try not being so smug, David.

You never did say where you were; where your station could work across
the Pacific ocean, and across the Indian and Atlantic oceans. I'm
trying to think of a geographic location with "both coasts" and those
three oceans.

So kindly tell us what country that you operated from that had "both
coasts" and three oceans.

> > > I was "intimately" involved with HF military communications, working

>
> What's the difference for purposes of discussion? Do you know anyone
> who ever worked 24 hour days for a solid week?

Your comment, "of my own choosing" sounds very odd for a military
radio station.

You said that you had an amateur station, and you pulled military shifts of your own choosing.

In your original statements above, did you really mean to string together an amateur station from a country with two coasts and three oceans, with your military station in Vietnam?

> > > I was "intimately" involved with in-country HF military operations for a
> > > year in Vietnam.
> > >
> > > I spent fifteen "intimate" years overseas with the U.S. Department of

> > So this wasn't amateur radio either?
>
> Read it again and perhaps you'll figure it out.

But I thought this group was to discuss amateur radio. And you do get after Len for bringing up other services communications, however long ago it may have been.

> > > I've spent forty years as an active radio amateur, operating various
> > > modes on bands from 1.8 through 432 MHz.
>
> Aren't you going to ask me if this was military communications or State
> Department communications?

No. I recognize this as an amateur radio discussion group, and I recognize that you are finally addressing amateur radio operations. Congratulations.

> > Why did you stop at 432 MHz? Even most store bought amateur UHF rigs
> > are capable of going up to 450 Mhz.
>
> Weak signal work on SSB and CW takes place in that area of the band.

It may. Or it may not.

> That's where I happen to spend much of my time. Is that all right with
> you?

Peachy.

> > Oh, uhhh. Forgot. Superior Heil "doan do FM (tm Kelly)"
>
> I have a 440 rig at home. I use it occasionally. I use 2m FM

So your statement of frequency ranges above is inaccurate. It would more accurately read, "1.8 to 450 MHz."

> regularly. Looks like you've struck out on your attempt to hit a nerve,
> little electrolyte.

No attempt made. I just figured that such a great ham as yourself was
short changing himself with such a limited portfolio of RF activity.

> > > > I can go on and on without ever

> > different learning experiences with Morse Cose to see what I mean.
> > Some are never able to learn it at all.
> >
> Learning rate isn't under discussion. Experience is.

Ah, No. You specifically said, "knowledge." Think about it. Can one
attain knowledge only through experience?

> > But with respect to radio theory and ops, perhaps Len is a quicker
> > learner than you. Perhaps not.
> >
> Ask him.

I wonder what he would say?

> > You tell me everyone if learns the same, and if so, I'll have to give

Ah, sorry. You don't get this one.

> > Unless Len actually has more than just the three years
> > RF experience that you reference.
> >
> Ask him. I'm sure he'll be happy to go on about it at great length.

Much like your military and dept. of state resume?

> > And what of education? Can education play a role in knowledge?
> >
> Figure it out.

Ah, you don't get this one either.

Dave, you deserve a much needed vacation from rrap. At least consider
it.

Part 97 addresses your and Carls priveleges.

> > That would make you a fool.
>
> I'd guess the fool to be one who is asked about a regulation about
> "sharing space" and responds with some nonsense about the Farnsworth
> method of learning morse.

You don't believe in sharing space which the FCC says you must share
in a document called Part 97.

You remain the fool, Farnsworth not withstanding.

> > > > > He's allocated the same frequencies. He may or may not share the same

Source record: 74665

Perhaps yesterday's, continuing massive power failure in the northeastern U.S.A. and Canada will convince the power utilities that they should focus their energies and resources on their core business, rather than entering a new business that is already served by telephone companies, competitive local exchange carriers (CLEC), cable television operators, satellite services and, in some markets, broadband wireless access (BWA) carriers.

According to the August 15th Toronto Globe and Mail, "critics have been calling for breakers to be installed throughout North America's grids for some time, only to be told by the grid operators (power companies) that there is no money to fund such a massive infrastructure overhaul."

Why would regulators, politicians and the power companies' shareholders be interested in spending billions of dollars entering a new business when they obviously have major challenges in their own backyard. Seems like time to "stick to the knitting".

I wasn't being smug. I suggested that you ponder the question and try
to come up with a plausible answer.

> You never did say where you were; where your station could work across
> the Pacific ocean, and across the Indian and Atlantic oceans.

No, I didn't say. There are numerous places within the continent in
which we live where such is possible. Ponder the matter.

> I'm
> trying to think of a geographic location with "both coasts" and those
> three oceans.

Keep pondering.

> So kindly tell us what country that you operated from that had "both
> coasts" and three oceans.

I never wrote that it "had" them. I wrote that I operated a station
capable to working across them.

> > > > I was "intimately" involved with HF military communications, working

> Your comment, "of my own choosing" sounds very odd for a military
> radio station.

Those words don't appear in the paragraph concerning military
communications. You might want to read it again.

> You said that you had an amateur station, and you pulled military
> shifts of your own choosing.

I said nothing of the kind. If you have problems, maybe you can have
someone read it for you.

> In your original statements above, did you really mean to string
> together an amateur station from a country with two coasts and three
> oceans, with your military station in Vietnam?

Those things were not strung together. Perhaps you can find someone
with writing skills explain the idea behind paragraphing.

> > > > I was "intimately" involved with in-country HF military operations for a

It is much more accurate than your statements in which you could not
properly attribute the words "of my own choosing".

> > regularly. Looks like you've struck out on your attempt to hit a nerve,

Actually, Larry, she said that she only needed to be a half-wit to debate you.

It wasn't a kind remark, and it went right over your head.

> of four years ago at the FCC.

You mean where Steve asked the FCC to disregard your reply comments to
the FCC.
That's what reply comments are for, Len - people either supporting or
opposing the comments of others. You spent over a dozen pages of YOUR
reply comments telling FCC to ignore and disregard the comments of one
Michael P. Deignan. So you have to accept others telling FCC to
disregard your reply comments. Otherwise you're a hypocrite.

> The AOL screen name of "Avery Fineman" is still registered to me.

Yeah, we KNOW.
>
> I have, currently, six other screen names at AOL (including this one)
> but "Avery Fine" was NOT one of them. Never.

"Avery Fine" was NEVER one of your screen names, you say? That's
simply not true. You posted with that screen name here a few years
back.

Of course you will never admit that you did so, regardless of the
evidence presented.
>
> Yes, I've used the screen name of "Avery Fineman" in here and also
> identified myself at the end of the post.

Sometimes you have identified yourself in posts. Other times you have
not.

Let's see - you have used the AOL screen names "nocwtest", "lenof21",
"averyfine", "averyfineman" and "lenover21" in this newsgroup. That's
five. You admit to having seven. For all anyone knows, you could be
"vshah101" and a host of others.....

But you are not me. ;-)

In fact, for all anyone knows, "nocwtest" and "averyfine" could still
be registered to you.
>
> Apparently some in here are terribly uptight and can see no humor in

> too long to explain to anal-retentive control freaks. :-)

Why should anyone care?

The important question is "why does Len need so many different screen
names from the same ISP in order to post to a few newsgroups"?

Perhaps touching your tongue to that B battery fried some
neurons....;-)
>
> I can't "prove" who "Avery Fine" is...but both you and Reverend Jim
> are prolific posters from AOL. Coincidence? :-)

It can be proven that "Avery Fine" used to be YOU, even though you
have denied it. Perhaps "Avery Fine" still is you, Len. And YOU are
the most prolific and wordy poster to rrap - AOL or not. Coincidence?
;-) ;-)

Hmmmm...Len uses terms like "psychotic" and "copycat killer syndrome"
to describe other posters, and claims to know the motivations of
others he has never met. ;-)

"Psychotics will never admit they are crazy."

Ayup - you oughta know, Len ;-) ;-) ;-)

Toodles fer now, Len. The bands are alive with the sound of Morse and
there's much to do here before the snow flies.

>professionals" can be utterly clueless about the practical aspects of
>amateur radio.

HARF!!! :-)

>Here are some others I've seen, by various others:
>
>- Institute an age requirement of 14 years as the minimum for any
>class of amateur license

Yeah...let's hear it for all those "mature" 6-year-olds on the air
wiith the "big gun contesters."

Wow, that 14-year-old arbitrary limit sure must have stung you!

>- Eliminate all subbands-by-mode

Blasphemy! Morsemen DESERVE elitism and their own private
spectral playpen!

>- Reduce the number of license classes to one all-privs license.

Horrors! Remove the STATUS-TITLE-RANK-PRIVELEGE?!?!?

Can't have that!

>- Reduce the number of license classes to two - entry and all-privs.

The OLD system - the one in which you triumphed - is ALWAYS
the BEST!!!

>You get the idea.

Absolutely. Keep your elite morseman status and titles...after all
you are in the Archaic Radiotelegraphy Service!

>> The PCTA's, because of their being so negative, and scaring the new
>> people away?
>
>"Negative"? We're not "negative" - we're FOR something!

What you are FOR is to keep your rank-title-status-privilege and you
don't want that "contaminated" by large-scale changes.

>Meanwhile, the real challenges don't get the spotlight. Like CC&Rs -
>what good are licenses if we cannot put up effective antennas?

What good are you that can't give in to new ideas, progressive ideas,
that intefere with your standards and practices of the 1930s?

Not "old" ones. Try Apollo Field at the Sepulveda Dam Recreation
Area in Los Angeles' San Fernando Valley. Real runway and ramp.
Popular with the Large Scale R/C groups here. Lots of model helo
flying too.

Model aircraft hobbyists lobbied for and got a whole bunch of 72 MHz
channels for R/C some while back. They still have them. Look in
Part 95, Title 47 CFR.

>> VORs have been in use on civil airways since before 1960. A lot more

>>
>> Oh, my, you love the past. :-)
>
>An interesting comment coming from one who frequently brings up THE past
>as well as his own past. :-)

The OLD "range markers" (actually "range beacon system") went
out with civil aviation way back in 1955 with new ICAO rules on
radio and radionavigation.

VOR or Very high frequency Omnidirectional radio Range, offers at
least a quantum leap over the old morse keyed "A-N" beacons.
Anyone claiming they do air navigation by those old "A-N" beacons
is at least 48 years out of touch with reality.

Morsemen tend to be out of touch with reality.

>> Didja know you can address all your written test content complaints to

>

>Why are you concerned? You're no more a radio amateur than you are a
>pilot.

I've designed and proved civil aviation radionavigation avionics. Those worked very well.

Of course that was as a professional, something you detest.

I passed my US private pilot written exam in 1962. Gave up piloting due to cost...$17.50/hour dual, $12.00/hour solo back then. A typical four-place, single-engine, retractable-gear light aircraft back then cost $30K (Mooney, only bare essentials of instrumentation). Hull insurance premiums were 10% annual for beginning pilot-owners.

Back in 1963 my house purchase price was $30,500. It is now worth about $375 to $390 thousand if I were to put it on the market. I made a wise move to invest in real estate instead of a cute lil airplane...those haven't appreciated very much in 40 years.

What the hell is your problem, Herr Robust? AVIATION isn't the subject of this thread...someone else brought up aviation. You don't have anything to do with aviation except to rack up frequent cryer miles in here.

You don't know a VORTAC from hardtack. If you heard ATCRBS pronounced you would think it an insect infestation. Pfffft.

LHA.

A mode that is now out of use by pretty much all government services
(emergency services included). I personally have an interest in
learning the code, but don't see how it should remain a requirement if
it is no longer to be the 'lingua franca' of HF throughout the world.
Yes it is a low bandwidth, low power mode that can be very useful, as
this writer points out, but without that international status I don't
think that it should be required anymore than an in depth
understanding of psk31 or any other digital mode. All operators
should know of its existance, where on the bands it is expected to be
located, and where to learn more. There will always be a place for
Morse/CW and I'm sure there will always be enthusiasts... even if it
is no longer a requirement... just like french is no longer THE lingua
franca of the world ironically enough.

Good show Walt. Bring in the 'Jewish problem'. Perhaps you are mad that
Hitler didn't win, eh? Are you perchance a 'closet anti-semite' ??

As for our reasons to stop Iraq....you don't get it do you? We didn't and
don't want to hurt the average Iraqi. We just wanted to get rid of So Damn
Insane and his henchmen. Before he became the Hitler of the 21st century.

You see old boy, if Chamerlain (sp?) would have had his arse out of his
boot the whole thing (ww2) would never have been.

So I AGREE with Mr. Bush. Kill the bastards before they kill us.

And yes indeed...I can guarantee 9/11 and the murder of innocents PISSED US OFF. And guess what? YOU AIN'T SEEN NOTHING YET.

I have to say though, that I find it strange that after all the searching,
not one WOMD was found in Iraq. I simply don't believe they were all
destroyed without trace; put in their position I would have used any weapons
I really had.

You do know that one does not "tell" the FCC to do anything if one
is smart. That turns them off "really quickly".

You do know that letters, e-mails, etc. do not get put into the
Docket Record and therefore are not required to be considered in
reaching a decision unless they are formally filed using the format
and procedures specified in Part 1 of the FCC Rules.

Don't get me wrong -- I am dead set against continuing the CW test
requirement and the establishment of BPL. I just don't rant and
rave about it.

It's very simply, Bill. BPL offers far more potential profit than further investment in existing infrastructure does.

Besides, power companies aren't really bothered by the occasional power outage, especially since angry consumers can't go elsewhere to get power. The companies lose a little money while the power is off, but they know consumers will crank up those heaters and air conditioners just as soon as the power comes back on - pretty much making up any loses from the power outage itself.

On the other hand, the potential money from BPL is enough to get those companies, and their investors, really excited. And, unless we come up with something really strong to fight it, something much stronger then rhetorical evidence from the UK, it is going to be almost impossible to stop.

What we need is well done studies from the areas where BPL is now being tested - studies showing the actual impact on radio (frequencies, noise levels, and so on). And, to be honest with you, I'm not even sure that will be enough.

Source record: 74711

Hello all,

I just got back tonight from several days of meetings
in Washington.

Wed. when I arrived in Washington, one of the first things
I did was file NCI's Petition for Rulemaking with the FCC.

It is available in .pdf format at http://www.nocode.org
under the "Articles" link ...

Some will undoubtedly say "What took you so long?"

The answer is simply "We wanted to do the best possible
job of getting it right."

It hasn't been assigned an RM number or put on public notice yet ...

NONE of the Petitions are open for comment yet ... the procedure
is to wait for them to be assigned an RM number and put on public
notice. Comments filed before then probably go into the bit-bucket.

BTW, NCI's Petition was filed Aug. 13 and is available on the
NCI website at http://www.nocode.org under the "Articles" link
as a .pdf download.

Ed Hare, W1RFI, of the ARRL isn't the only one measuring the interference
at the BPL pilot test sites ... I was in a meeting today with folks from
NTIA
(the equivalent of the FCC for federal govt. users of the spectrum) and they
are out doing measurements, too. The meeting was about something else,
but I got the impression that they aren't happy with what they are seeing
either ...

Message-ID: <slgarwood-AF225E.21302615082003@netnews.attbi.com>
Source record: 74714

I have a question on mobile/portable operation ... I seem to recall that the FCC dropped the requirement to sign as portable/mobile with the region the station is operating in. I can't seem to find any reference to it. I assume that W9XXX/W5 is good operating procedure but is it an FCC requirement? I do know that a change in the 90s made W5/W9XXX equally vaid as W9XXX/W5 ....

The only issue investors care about is income. They won't make any new
income by sinking capital into repairs and upgrades, they would
generate new income with BPL. Capitalism 101.

In article <9829b709.0308142147.67866cad@posting.google.com>, dickc58@att.net (DickCarroll) writes:

> Then came the soundcard era, and that's where things really heated up
>with
>PSK31, RTTY, HELLSCHREIBER and if I could have found anyone on the air
>when I was looking, I'd try MFSK-16.

Dick:

MFSK-16? Man, talk about all the fresh, young, computer-literate digital-mode experts flooding ham radio since we dropped the code down to 5 Words Per. I have NEVER found anyone who can have an MFSK-16 QSO with me! Not one. In fact, MixW gives me an armload of digital modes, but all I've done with it so far is PSK-31, RTTY, Hellschreiber, and SSTV.

> Meanwhile since I/we sincerely believe that radiotelegraphy is
>valuable to the point that new hams should be required to get just a
>bit of it before being allowed to forgo *any* further required
>actions-they won't have to ever do anything whatever with that

>were just too lame or lazy to "do it" lay out all sorts of labels and
>accusations toward us, not the least of which is the clearly visible,
>easily-identified lie about our attitudes toward digital
>communications.

Well, I guess it's a lot easier for them to CLAIM technical superiority, and look down their pointy noses at Morse code proficiency, than to actually PROVE anything. But, hey, we're used to that!

> For once and for all-- **IT JUST IS NOT SO!!!!!*
>

I can claim interest in any of the topics dealing with amateur radio and to some of those which take slide off into the field of professional radio. The fact is, I am actively involved in amateur radio and you are not. That aside, I wrote nothing about MY relevance to the material you conveniently snipped. You got it wrong.

I have no need for others to worship me, Len. I haven't even asked for your quiet veneration after correcting your erroneous comment about the Japanese equipment boom of the 1960's.

You have yet to provide a definition of "over-prideful".

> would consider himself to be a stalking victim.

Pot..Kettle..black, Dumbfuck High-el......maybe you can tell us all about your messenger boy job as a courier again...give us some more lies...you tell lies about posters on here all the time, High-el.

> What is your fixation on sex with children?

Why is your only tactic similar to Pee Wee Heman's? Is it beacuse you're so fucking dense and narrow-minded that you just have to give the impression that you are a megalomaniac?

> > > By the way, I'd go very carefully on that stalking stuff, Rog. You've
> > > frequently harrassed me here and in direct e-mails.
> >
> > Awww, poor Dicksucking Davey.......you stalked Rog as well, because the only reason you came to the ARES meeting to confront him, and let's not forget how you were going to break the law by posting his "best newsgroup material" on telephone poles in Rog's neighborhood.
>
> What is your fixation with homosexual activity, Roger?

So defensive, homosexual Davey? That's all right, you can pretend your marriage to the finnish mail-order whale is not a sham.

> Bert and I attended an ARES meeting at the invitation of the Emergency
> Coordinator for purposes of joining.

That why you practically held hands and made loving eyes at each other? Oh maybe you gave each other the reach around before you got there that might explain the peculiar smell along with both of yours' body odor.

> I think you've gotten your wires crossed on the breaking of law, Roger.

I think you've been caught, Dicksucking Dave. I think you need to locate the law that prohibits you from putting posters on telephone poles, because American Electric Power (who supplies the power in your area) might just want to prosecute.

>You were asked if you'd be proud to have your wife, mother or children
> see some of your handiwork. You were asked if you thought your

I was? Looks like you asked Wiseman, who I'm sure would report your tacking up of posters of such things to the proper authorities....he made sure AEP got a copy of your letter saying you were going to do that.

> neighbors would enjoy seeing some of your memorable posts tacked to
> telephone poles in the neighborhood. I can post my exact comments and
> your sparkling reply here if you feel that would set the record
> straight.

You mean the reply where Wiseman told you to fuck off? Bwhahahahahaha!!!!!!!! Did it make widdle Davey so mad?

> After all, you seemed to think enough of your numerous
> newsgroup postings to post them in this very public venue.

Awww, don't cry, you are the one who made the threats, dumbfuck...Wiseman only posted them...lol!!!!! How does it feel to be a fucking retard, baby huey High-el?
You pull that "goggle" thing with posters here you don't like, like Lenny and whomever else disagrees with the overbearing gasbag known as Dave High-el.

> > > You have an arrest
> >
> > I do? Prove it.......

>
> It is public record,

Prove that Wiseman has a criminal record, dicksplash.

>Roger.

Obession...well looks like the mental health people will want to know about this one.....

> By the way, is this another <IKYABWAI>

More likely it's a pathetic backpedal, just like you always do.

> > > record and you've been booted from a couple of ISP's.
> >
> > Bwhahahahahahahaha....prove it, kiddie diddling Dave.
>
> One note to OVIS should clear that one up.

Mwhahaha.....You mean you'll get told that Wiseman told that FATASSED HAG Pam Hoffer to go fuck herself and to quit giving Anthony those blowjobs in the server room????? Wiseman sent me a copy of the e-mail he sent cancelling his account there. And no, I won't post it because that's more your style...or lack thereof...<guffaw>

> What is your fixation with child sex?

Just want to converse in subjects you know so much about.

Lying for your friend? Or maybe he knows about your kiddie porn pics you try to sell. Maybe he's another gay lover for you.....

> > he still PASSED the "retest" it's doubtful you could as of today, ASSHOLE.
>
> "He/you" passed.

Awww, a feat you couldn't do. And try harder..."He/you" <guffaw> couldn't pass the Technician class exam today if you were called in to retest. By your own admission you don't know a fucking thing about electronics.

> Whether I could or couldn't isn't an issue.

Admission you couldn't pass, noted.

> I wasn't contacted and told that I needed to retest.

In reviewing Wiseman's letter to retest, there's no reason given for it. Are you saying you speak for baldy and the FCC now?

> There's been no enforcement
> action taken toward me in forty years.

Liar. But before forty years is a different story, eh? Or maybe they just don't publish those letters like they do in the last couple of years or so....I'd say you did get letters.

>
> What is your fixation on sex with children?

I just want you to know that people know about you, kiddie diddling Dave?

>
> I don't have a mail-order bride.

No, you had to beg some finnish fat fuck to marry you, after using that mail-order bride service since you are too fucking ugly with your thick glasses to get an American woman.

> I bathe on a regular basis and my
> clothing is washed and pressed. What is your fixation on body odor and
> wrinkled clothing?

According to some fellow, you showed up smelling like dung with cheap cologne trying to mask it that didn't work and wrinkled clothing at an ARES meeting. Reportedly, they looked like they were not washed or pressed in a week. Although with today's fabrics, most clothes aren't pressed that much anymore. But somebody as backward looking as you wouldn't be expected to have modern things around..is that why you only run cheap-assed, old, used ham equipment?

> > > > > I continue to attend. We interact
> > > > >

Pussy....Nope, haven't heard a thing, and haven't been paid any visits, so you are talking out of your fat ass.

> What is your fixation with homosexual oral sex?

Why does talking about your homosexuality bothers you so?

> How would you, the non-Roger anonymous poster know
> anything about what I've said all along?

Most people can read, dipshit. Unlike you, who skated along in school. You have no fucking idea how many people read this newsgroup do you?

>"Duuuh,

There, there, Forrest Gump High-el, you can stalk your obsession some other time. And don't forget to boil those shrimp.

> > Maybe you need to give him another blowjob so he might pay attention
> > to you next time..haven't heard a thing from him though
>
> Is that how you write about your chief of police--a man who is on your
> city council?

He's not my chief or councilman, you dumb fucking bastard. And since you ask, are you so un-American you want to censor freedom of speech? Looks like High-el has ties with the Taliban.....
Somebody needs to know.

>
> > ....some
> > case, dickhead...... BWHAHAHAHAHAHAHAHAHAHAHAHAHA...maybe it's because > I don't live in Glen Dale, Davey, not everybody who posts anon is your > obsession.

Oh, is that fatassed whale Leila feeding at the trough again?

>Roger, is this another, "Duuuh, how'd you know
> it was me"? Do you know how few anonymous posters post items about me
> filled with nonsense rants about child pornography, sex with children,
> homosexual oral sex, fixations with body odor and wrinkled apparel?

Looks like it hit quite the nerve, you're either so rattled or so stupid or a combination, you're repeating yourself, dumbfuck. I'd go with the rattled theory, since you think everybody is Roger.

> > > Ta-Ta for now.
> >
> > Your not-so-Closeted homosexuality, noted.
>

And the Anti-American High-el still tries to censor others' freedom of speech...he does his neo-Nazi and Taliban friends proud. In fact, he helped dictators get a foothold while he was in Africa.

The only "experience" you have is cornholing little boys. You sure as hell haven't advanced ham radio in your so-called 40 years of tenure.

I didn't say that. But by extension, -you- would think that Rush
Limbaugh is a half-wit because he ties half his brain behind his back
to make it fair for the libs.

So who claimed the be doing such navigation? I knew a guy who, back in
the early 1980's, regularly navigated to Louisville from Cincinnati by
homing on WHAS's signal.

> Morsemen tend to be out of touch with reality.

How would you know?

John, if you were getting close, you would be cold, not warm. I used
to "flight follow" those routes with respect to the upper level winds
and the computer flight plan database.

And that location has coasts and adjoining oceans. More importantly,
Heil was never there.

Brian

People who generally don't acknowledge problems, generally don't have
them... But, that is much too liberating a thought for you, Dave.

My memory fails me on that one. I don't believe we had any in the Giant Voice system. The LP's were the big twin boom Collins design and they were massive. The receiver site and transmitter site were several miles apart. We had the capability of selecting and controlling antennas at both sites from the receiver site.

You fell into Brian's trap of concocting such a place. I operated right here in the United States but I know the place you're thinking of though. My old pal Bob Harler K8MWO, a retired Naval Commander was in charge of Christchurch support operations for the one you came up with.

Whew....someone finally gets it--just kidding, Dwight. You probably "had"
it all along. That is exactly what my rattling has been all about. I just
don't see this fight being won (from the amateur radio perspective) and, I
think there a "ways around" BPL interference. So, where do we spend the
energy? Before, or after and, on what? I'd rather think that the way to
fight BPL and win (for sure) is to get busy designing, testing and
implementing ways around it, *before* it becomes the major issue that it
will--because, like I said, I don't see this fight being won. Way, way too
much commercial interest--the very people that feed the pockets of the
politicians.

Uh huh...You still have yet to provide the evidence that those
200K folks would have NEVER obtained an Amateur license without the
"No Code" option.

> Getting all puffed up and antagonistic won't prove any case for
> you on the morse code test. It won't prove any case for your

There's an antagonist here alright, Lennie...It AIN'T Jim
Miccolis.

> You would not accept statistics of a noted PCTA taken from the
> FCC public database then and you refuse to accept it now. There's
> no point in rehashing an old argument where you LOST.

What "statistics", Your Scumminess? You have NOTHING that can
"prove" your assertion. It was an empty verbal joust, and the
windmill won.

> You won't make any valid "points" in here by repeating "you're
> mistaken" and continual refusal to accept FCC database
> information.

WHAT in the FCC database "proves" that 200K people would NOT have
obtained an Amateur Radio license without the No COde option?

As for the "careers" of those who got the NCT license, I suggest
YOU take a look at Mike Carrol's site sometime and watch the expiring
callsigns part. NCT expirations outnumber all others by almost
5-to-1.

Read any of the filth coming from the interesting fellow here in my
county who posts through the "anonymous" remailers? He doesn't
acknowledge that he has problems. That doesn't mean that he doesn't
have any.

Or perhaps you'd disagree.

These are the number of unexpired FCC ARS
licenses held by individuals on the dates listed:

As of May 14, 2000:

Novice - 49,329
Tech - 205,394
Tech Plus - 128,860
General - 112,677
Advanced - 99,782
Extra - 78,750
Total - 674,792

As of August 15, 2003:

Novice - 33,205 (decrease of 16,124)
Technician - 258,384 (increase of 52,990)
Technician Plus - 66,402 (decrease of 62,458)
General - 141,381 (increase of 28,840)
Advanced - 83,038 (decrease of 16,699)
Extra - 104,543 (increase of 25,793)
Total - 687,134 (increase of 12,342)

> under the "Articles" link ...

OK, let's cut to the chase.

Obviously the main request is to dump Element 1 ASAP. And there's probably lots of reasons given for doing so, including the Commission's own words "no regulatory purpose".

But what else was in the petition?
>
> Some will undoubtedly say "What took you so long?"
>
> The answer is simply "We wanted to do the best possible
> job of getting it right."

What did it take - six weeks? Not really long at all. Plus there was always the chance FCC would have simply dumped Element 1 on its own, instead of doing the whole NPRM thing.

What surprises me personally is that NCI didn't have a proposal ready to go before WRC-03 even began. But that's all water under the bridge now.

As you have pointed out, Carl, FCC hasn't even given any of the proposals an RM number yet. And it's reasonable to assume there will be more proposals - from NCVEC, ARRL, and other groups. FCC may assign numbers, or they may take ideas from each one and produce an NPRM.

And of course those wheels turn slowly.

You should try *less* keeping up, Dave. I don't even scan for Len's posts. And, *usually* when I see Len's name embedded in a post I open, it gets closed right back up.

Maybe your and Len's personalities are closer aligned to each other than one would even imagine possible...

You play right into his game...

It sounds to me like you (because I work with a lot of Brits, Walt, and you don't emulate their opinions at all) like using a broad paintbrush. You are disgusting to promote, joke about, or align yourself with bigoted, racial remarks. You'll find true friendship, though, in a few people from this very newsgroup.

I could not care one iota less what the likes of you think of Americans (was that North- or South-Americans by the way, you geographic ignoramus) because you're opinion is obviously obscured by some kind of hate. And, like I keep trying to tell Dave: that is not my problem, it is yours. So, off to Hell with you, and quickly.

No, our repeaters were up and running. There are repeaters around here that aren't even connected to the mains :)

btw, cell phones were in trouble, they can't handle all of those calls to 911 "what happened to the power?" - pagers were out, and the local tv stations were down. I found out what was going on (my e-mail and homepage were down too) via those repeaters. Funny how that happens just when folks are convinced that there is no need for amateur radio what with telephones, cell phones, internet, etc.

73 from Rochester, NY

There was some question as to whether S25.5 would be suppressed
or modified (as it was) to eliminate the Morse requirement ... that
uncertainty made us decide to see the final outcome before developing
a final strategy/proposal.

> As you have pointed out, Carl, FCC hasn't even given any of the
> proposals an RM number yet. And it's reasonable to assume there will
> be more proposals - from NCVEC, ARRL, and other groups. FCC may assign
> numbers, or they may take ideas from each one and produce an NPRM.

NCVEC already filed a petition, as have several individuals.

From a meeting I had at FCC on Thursday, the indication is that
they will lump them all together in whatever course of action they
decide to take.

ARRL doesn't need to file a petition on the Morse issue, unless, of
course, they wise up and decide to ask the FCC to eliminate Morse
testing ASAP so they won't continue to alienate a portion of the
US amateur population that's larger than their current total membership :-)
(They don't need to file a petition to keep code testing, because that
is the status quo ...)

> And of course those wheels turn slowly.

We shall see ...

Funny you should mention that. At a recent public service event, the organizers were trying out cell phones for support this year, in conjunction with the amateurs. They were hoing to replace the hams with the actual support people that we interfaced with having a cell phone.

Well, most of the race was in areas where cell coverage was not. The phone my cohort had would ring occasionally, but he couldn't raise anyone after answering. And for general announcements, HQ had to call everyone who had a phone, since there was no way of all the cell phone users getting the message at once. Then they had to try recalling those who were out of range.

Took about a half hour for them to realize that the cells simply didn't work.

"can you hear me now?".....now? 8^)

Well would there be much of a point in submitting a petition that would
be a duplication of
those already submitted? I'd just as soon let them focus on BPL....

If it was JUST ham radio that would affected then your right. No way in hell. However it isn't just ham radio. Its any user at all on HF and low VHF...and PROBABLY due to harmonics , etc way up the spectrum.

I think we a missing the boat of how to fight this thing tho. The ARRL recently signed a agreement on 'first response' being a HAM RADIO thing. This with DHS (Department of Homeland Security). Should we not be pushing this fact? Its gonna be real tough to be a first responder with all kinds of radio goodies and no way to hear each other.

Oh sure now I hear....it not gonna bother the 2 meter and above bands. WANNA BET?????????????

I believe you will find they ended up in Syria and possibly Iran and Turkey.
They had years to spirit them anywhwer they wanted to. Of course it really
doesn't matter much. Saddam is history and thats what counts in the long
run.

Unfortunatly the good ole 'Yanks' are destroying all the WOMD, you know those nasty chemical things. This per a worldwide agreement. How do I know you say? Well the 2000 TONS of the stuff next door to me is being smoked as we speak.

Now if you are refering to the nukes? Sorry, we are keeping those.

I apologize for my remark towards your family background.

And you are 100% correct. The USA was indeed very anti-semite in the time before and during WW2. However after seeing what the NAZIs did in the 'camps' we became a very big supporter of the 'Jews'. In fact we were instrumental in helping to establish the modern country of ISRAEL and are to this day there best friend on this planet.

Since were on the subject Walt. Shall we now discuss how the Brits did there best to stop the Jewish refugees from landing in Palestine??????? No, we better not.

That's the first best piece of news yet today abt BPL. I've been
wondering where NTIA has been in the mix. Given their key position in
Homeland Security I suspect that they will have the final word on BPL.
Assuming they come out opposed to BPL of course.

The second best piece of news today is the new eggs in the face of the
power industry. Their credibility has dropped to zip in 48 hours flat
and methinks that they'll now have bigger problems selling BPL given
the fact that their core technologies need all the attention they can
muster.

No matter what stance the ARRL takes or no stance at all, they will alienate a portion of the US amateur population than their membership. The number of non-ARRL members supporting code testing is larger than ARRL's membership as well as the group opposing code testing.

The various surverys that have been taken indicate that the ham community is about 50/50 on this issue. That seems to hold true inside the ARRL membership as well as outside it. Thus the ARRL will "alienate" half the US ham population no matter what stance they take.

> ham population no matter what stance they take.

The "various surveys" have all been self-selecting and have no scientific
validity.

Plus, they are all several years old and the demographic and thoughts have
changed a lot since "restructuring."

If you look at the numbers of licensees with less than General class
licenses,
do you really believe that anything approaching 50% of them are in favor
of continued Morse testing?

I seriously doubt it ...

Those licensees alone outnumber the ARRL's entire current membership.
Also, many current ARRL members (and a lot of NCI's members are
ARRL members, too), including holders of General, Advanced, and Extra
class licenses oppose continued Morse testing.

Have you read the NCI Petition? If not, I would suggest you read it
with an open mind and give due consideration to its content.

Incorrect, little electrolyte. If I write "It may rain or it may not",
the words do not imply that I don't believe in rain.

The size of the ARRL membership and its demographics is documented. The
size and demographics of the overall ham population are also documented.
Anyone can do the math.

>
> > The various surverys that have been taken indicate that the ham

>

There have been internet surveys within the past year. Although they have
all been "self-selecting", it still shows a pretty even split. It's the data
that is available to us at this time.

> If you look at the numbers of licensees with less than General class
> licenses,

> do you really believe that anything approaching 50% of them are in favor
> of continued Morse testing?
>
> I seriously doubt it ...
>

Based on the Techs I know, it's possible. But that is not the point. The available data, although limited and not of the best quality, still indicates that overall there is a 50/50 split.

And do you really believe that all Techs and down want to ditch the code test and all Generals and up want to keep it? That's not a valid assumption at all.

> Those licensees alone outnumber the ARRL's entire current membership.
> Also, many current ARRL members (and a lot of NCI's members are
> ARRL members, too), including holders of General, Advanced, and Extra
> class licenses oppose continued Morse testing.

Do you really believe that the ARRL's membership includes no Technicians? Just as in the overall ham population, the number of members with less than General class licenses is approximately 50%.

>
> Have you read the NCI Petition? If not, I would suggest you read it
> with an open mind and give due consideration to its content.
>
> Carl - wk3c
>

I made no comment on the NCI petition. My comments were simply to demonstrate that the ARRL is in a position where it may not even be reasonable for them to take a stance either for or against code testing. With the nearly even split within the ARRL, any position that they take could alienate approximately half the hams in their own membership let alone the overall ham community. How does this become a comment on the NCI petition?

I have recently been reading on this thread and agree with all points made in it.

In my observation, it goes like this:

When a lot of Amateur Radio Operators (A.K.A., private citizens) get their toes stepped on, gather under the banner of their (arguably) representative organization (A.K.A., The ARRL) and say, "No, No! Look at these problems," the answer from regulatory agencies is, "Ahem...yes, well we'll do a study of this data and let you know the results," and then nothing else is heard about it.

But When the GUM'MIT get's IT'S toes stepped on and says, "No, No," generally it's, 'NO, NO!"

1390. Words of "Wisdom???" from Kim

Newsgroup: rec.radio.amateur.policy
Date: 2003-08-17 03:33:43 UTC
From: yodoc@aol.comnospam
Message-ID: <20030816233343.29815.00000034@mb-m21.aol.com>
Source record: 74760

Sorry to re-expose all of you to this, but I just thought it would be interesting
to examine some of Kim's "wisdom" extracted from what is obviously one of her better days on the newsgroup!

****
****

I don't know who you are, Walt, but you're absolutely disgusting.

Kim W5TIT

Why not, Dave? I'm bored and going through old stuff of yours to stir you up. You've probably already responded to some old, old, stuff...

Kim W5TIT

No rattling chains, there... And, I think you're right...

Kim W5TIT

If they're all that computer-literate and technically-savvy as you espouse them to be, then they're obviously intelligent enough to spend their time on far more constructive things....

Kim W5TIT

Maybe your and Len's personalities are closer aligned to each other than one would even imagine possible...

You play right into his game...

Kim W5TIT

Now you're giving away my secrets, Brian! I didn't want Larry to know I am giving him the advantage... ;)

Kim W5TIT

You mean you feel bullied, Dave? Oh, and "stuff it" generally means a response to indicate indifference to something that has been said. So, it's a very appropriate counter.

Oh, and try not to feel so bullied...

Kim W5TIT

Brian, Brian, Brian, it did not go over Larry's head at all... He is in denial (as usual)

Kim W5TIT

Maybe you just don't get the philosophy, Dave.

Kim W5TIT

Your book doesn't include many more scenarios than your little "me" world,
Dave.

Kim W5TIT

People who generally don't acknowledge problems, generally don't have
them... But, that is much too liberating a thought for you, Dave.

Kim W5TIT

****
****

Well, there you have it! Unfortunately, "it" adds up to absolutely nothing!

Kim, you'll never make a dime as a persuasive, motivational speaker --
so don't give up your day job!

Sterling:

That is correct.

> I can't seem to find any reference to it.

That's because the requirement no longer exists.

>I assume that W9XXX/W5 is good operating procedure but is it an
>FCC requirement?

No, it is not.

>I do know that a change in the 90s made W5/W9XXX
>equally vaid as W9XXX/W5 ...

Neither configuration is necessary if a U.S. licensed amateur is operating within the United States. A U.S. licensed amateur operating under reciprocal operating authority in a foreign country would sign using the host nation's prefix plus the U.S. amateur callsign, such as DL2/K3LT, should I be visiting/operating in Germany.

Dear NCTA:

I regret to inform you that "Restructuring" the US Amateur Radio Service's licensing system, to reduce the code testing speed to 5 WPM for General and Extra class, in addition to the existing No-Code Technician-class license, has resulted in a whopping 1.79 percent growth rate in the ARS overall! What do you suppose we're gonna get from No-Code HF? Maybe 2 percent?

Perhaps I should take this time to suggest a new motto for the ARRL:

Ham Radio -- Stick A Fork In Us, We're Done!

Kim:

As usual, you don't know what you're talking about. It is the NCTA who
always spoke of the young, computer-literate, technically-savvy people
who would create a digital paradise for amateur radio when the code
testing requirements were reduced and/or eliminated! I was simply
poking fun at them, but, typically, it went right over your head! Perhaps
you were too busy "reading between the lines."

What *might* prove interesting is some emergency where communications can't get through due to interference. Then the high power lawyers step up to the plate and see if they can do to the power company involved what was done to big tobacco. Of course, by then the damage will be done. Let someone win a billion dollars and then see what happens with BPL. I'm not pushing amateur radio here; I simply see radio communications (fire, police, aircraft, etc.) as more reliable than cell phones. It is also difficult to call 20 police cars individually when you need a rapid response to a large problem as opposed to just pressing the button on a radio transmitter. I am very rapidly learning to dislike the present administration a *lot*. An interesting aside with the power companies; Wall Street doesn't like them generating power. They simply want to buy power and resell it at a profit. Where is this power supposed to come from? With all manufacturing jobs going offshore and no one interested in actually building (or generating) anything ... well, I'll bet 50 years down the road they'll be teaching courses in business schools about what *not* to do. And these will be the years referred to in the books.

All he or she would require is adequate operational experience with the
Morse/CW mode in order to recognize and appreciate it's many benefits
and advantages.

>Should anyone with less than a masters degree be allowed to transmit CW ?

Of course not. Young children in Elementary school have learned the
Morse code, and passed the Pre-Restructuring code tests up to the
former Element 1(c) 20 WPM requirement. They have gone on to be very
good operators on the air. However, a few more college graduates on
the HF phone bands would certainly be a big help!

Hi,I am student & curiously want to build a practical ,high frequency spectrum analyzer , I have searched a lot for a one such : GBPPR 0 - 1000 MHz Spectrum Analyzer,
A Spectrum Analyzer for the Radio Amateur By Wes Hayward, W7ZOI, and Terry White, K7TAU & some others ï¿½, according that I live in iran I have some restrictions a bout some parts that they use in their circuits , but I think may poor mans spectrum analyzer is a good chaos because always I can find tv tuner as mixer , I think about four times I have emailed to MURRAY BARLOWE, WA2PZO
(radioguy@hoflink.com) the owner of home page of poormans sa on www.science-workshop.com (Updated 2/26/2003) but he doesn't answare ! has anyone buy recently from it ? does any one see the book or CD of "BUILD YOUR SPECTRUM ANALYZER " THAT IS SELLED ON HIS HOMEPAGE?
I DON'T WANT TO BUY THE KIT , I WANT TO BUY THE book or CD & according to the circuits & the parts I can find here make it,so does that book indicate circuits in detail or only say how do the kits should be connected together ? if so where can I found the circuit of it ?
Any help would be most appreciated.
Payam
Can you email me for reply instead of answering on group ?
payam79b@yahoo.com
thanks

I've been following this thread and subject with some interest.

It's a good thing that the government might become involved. When a group of Amateur Radio Operator's (A.K.A., private citizens) toes are stepped on, gather together under their (arguable) representative organization (A.K.A., the ARRL), and say, "No, No...look at this data," normally the answer from the regulatory branch is, "Ah, Ahem...well, we'll do a study of this and liet you know what we find," usually with nothing further heard about it.

But when the Government's toes are stepped on, when they say, "No, No," by and large it turns into, "NO, NO!"

>
> I gave you a URL where you could read it ...

That's not what I asked.

Here's the answer, to save others the bother of reading 20 pages to
get the answer to my question:

NOTHING.

The NCI petition consists of a request to drop Element 1 without
further delay or discussion and give Techs the same privileges as Tech
Pluses. No other changes proposed. Most of the 20 pages is supporting
reasons to make the change.

> > > Some will undoubtedly say "What took you so long?"

99% of what was in the petition would have been the same regardless.

It's clear NCVEC isn't done yet. They're talking about other changes
too.
>
> From a meeting I had at FCC on Thursday, the indication is that
> they will lump them all together in whatever course of action they
> decide to take.

In terms of requested rules changes, the NCI and NCVEC petitions are
essentially identical.
>

> testing ASAP so they won't continue to alienate a portion of the
> US amateur population that's larger than their current total membership :-)

Who is this alienated population? You can't mean NCI members, because
they are less than 1% of US hams.

> (They don't need to file a petition to keep code testing, because that
> is the status quo ...)

They may want changes other than elimination of Element 1.
>
> > And of course those wheels turn slowly.
>
> We shall see ...

You in The Pool yet? (see rrap thread by that name)

You're a nitwit, Airy. How would you like for me to blame your entire citizenry for some act that is the deed of your government? You just don't realize that we are peasants among our governments. So, if you truly believe that this country of citizens has done something against the world, perhaps you'd like to tell me when I was present at whatever act it is you think I've done?

What an idiot...

Ummmm, that would be something the US Govt is doing and--just to fill your puny head with some knowledge--there are a number of US Citizens who are protesting this very action.

And, it's quite obvious that all the Brits supported this action, since their PM got on the boat first launch... Right? The actions of a PM speak for the beliefs of everyone in that country right?

Get a life...

Walt, listen to your PM--he isn't questioning a thing about England's involvement with the US. He's even come over here a few weeks ago to pat 'ol GW on the back and say, "there, there now" it's OK, we're still with you.

Just as you are painting some stupid-ass picture of "Americans" (US Citizens) because of the actions of a government; so is Morph painting with a broad paintbrush because of your PM.

So, your incessant rambling is designed for nothing less than pure antagonism--or you are an idiot who really believes what you are printing. And, I'm done with you. You and Dick Carroll would fit in nicely with each other. He like broad paintbrushes also.

Hey Jim, can I change my response to The Pool? My new answer is NEVER! I think they're going to grant Techs HF privies by allowing them on the Novice/Tech "+" sub-bands and leave it at that. Element 1 lives on as a requirement for General and Extra.

Gee Carl, you're right. It's NOT 50%. Out of 5,020 votes, PCTA got 62% while
NCTA got 33%. I'll take that split, Dee. ;-)

Shall we try QRZ...?

> Plus, they are all several years old and the demographic and thoughts have

> I made no comment on the NCI petition.

I didn't mean to imply that you did ... just encouraged you to read
it and give it due consideration.

> My comments were simply to
> demonstrate that the ARRL is in a position where it may not even be
> reasonable for them to take a stance either for or against code testing.
> With the nearly even split within the ARRL, any position that they take
> could alienate approximately half the hams in their own membership let
alone
> the overall ham community.

I agree that the ARRL is "between a rock and a hard place" with respect to
the split in their existing membership. However, outside of their
membership
(in the >75% of US hams who are NOT members of the ARRL), I believe
that the demographic is heavily tilted towards the no code test side ...
thus,
I believe that the ARRL stands to pick up more members than they stand
to lose if they take a position that it's time for Morse testing to go.
(Not
Morse use, not taking away spectrum where Morse can be used, just the
test requirement ...)

> How does this become a comment on the NCI petition?

It didn't, and as I said above, I didn't mean to imply that it did.

Jim,

You say "NOTHING" ... but in the following paragraphs you admit
that "Most of the 20 pages is supporting reasons to make the change."
I think that's important information for folks to consider ... that's why
I encourage folks to actually READ and consider the NCI Petition,
rather than relying on your "5 cent synopsis."

Why do you want to "save others the bother" of reading the Petition?
(Could it be that you find the arguments so compelling that you don't
WANT others to read them???)

> The NCI petition consists of a request to drop Element 1 without

That's their business ... NCI is focused on the Morse test issue and
is not proposing more sweeping changes that are outside of our
charter ...

> > > > > space".

Why do existing FCC documents have to comply to your specific choice
of words?
Why must we discuss documents which don't exist?

You must share space with Carl. It is as simple as that.

> > > > > > Farnsworth exists as the de facto "code" exam, even though the

> Incorrect, little electrolyte. If I write "It may rain or it may not",
> the words do not imply that I don't believe in rain.

It implies that you don't know if its going to rain.

Besides, we were not discussing your beliefs. We were discussing your and Carl's priveleges. He has the same priveleges as you, regardless of your beliefs on the matter.

>license, has resulted in a whopping 1.79 percent growth rate in the ARS
>overall! What do you suppose we're gonna get from No-Code HF? Maybe
>2 percent?

The base of EEs can be expanded. You can get more EE from the rf specialty. Not all EEs have an interest in that specialty. But, from those that do, amateur radio could be a good hobby.

Amateur radio is not an EE friendly hobby. Those that like to build circuits are not welcomed as those that want to learn Morse code, contest, or work DX. EEs that are put off by Hams don't join the hobby.

As, I have noted before, the quality of rf courses could be improved with ARRL publications. The projects have real, rather than just textbook applications. This is not being currently done in most colleges.

Secondly, EEs are not joining amateur radio clubs. Some Profs that teach rf courses that I took do not have amateur radio licenses. People in the rf field are not attending club meetings.

The ARRL should make more efforts in this area. This would increase the number of people in the hobby. Also, there is a strong connection between EE and amateur radio that is not being realized.

> You say "NOTHING"

That's right.

>... but in the following paragraphs you admit
> that "Most of the 20 pages is supporting reasons to make the change."

Yup. And that was already referred to.

Look again at what I wrote:
```

"Obviously the main request is to dump Element 1 ASAP."

Which is true.

"And there's probably lots of reasons given for doing so, including
the
Commission's own words "no regulatory purpose"."

Which is also true.

And then the question:

"But what else was in the petition?"

The "what else" refers to things OTHER THAN dropping Element 1 and
reasons to drop Element 1.

And the correct answer is: NOTHING. The petition consists of a request
to drop element 1 and reasons to do so.

> I think that's important information for folks to consider ... that's why
> I encourage folks to actually READ and consider the NCI Petition,
> rather than relying on your "5 cent synopsis."

I've read and cosidered it, and I'm opposed to it.
>
> Why do you want to "save others the bother" of reading the Petition?

Because we already know that it would contain a request to drop
Element 1 and reasons to do so. Those reasons have been argued
endlessly here and elsewhere.

My question was about what else was in the petition besides dropping
Element 1 and reasons to do so.

> (Could it be that you find the arguments so compelling that you don't
> WANT others to read them???)

Nope. None of the arguments are compelling at all. Not to me, anyway -
YMMV. And we've all read them many times before.

I don't think the petition will change anyone's mind.

>
> > The NCI petition consists of a request to drop Element 1 without

That's the smart way to go. Focus on the core issue and don't be delayed or derailed by other issues.

Because while all NCI members agree on what's in the petition (they have to agree, by definition, in order to remain members), there may be a lot of dispute in other areas.

And since part of NCI's charter is to cease existence once the code test is gone, getting into other areas could cause all kinds of problems.

There are supposedly four other petitions filed, too. Wonder what they say?

And history runs counter also. No coders have mostly stayed away from
ARRL , and that seems unlikely to change anytime soon. They just don't
see much in it for them.

And without the 52,990 increase in non-code proficient Technicians, there would instead be a 7.85 percent decrease in overall numbers. Of course, that's a rough estimate - as rough as the numbers used in your argument.

If those with your views continue to deride modern Ham Radio, perhaps even less then 2 percent. Those changes are part of Ham Radio today. If you belittle those changes, you belittle today's Ham Radio.

The ARRL would be wise to sit this one out for the very reasons that
Carl has listed.

So where is your data (of any kind), Dee?

Oh, I think the odds of stopping BPL are sharply against us. In the end, unless there are some shocking results in the studies being done, we'll have to learn to deal with it. Hopefully our existing equipment will help us do so. If not, we'll have to look for new technology. To do that, we need the results of those studies. If a new solution is needed, I hope it is found before BPL is widespread.

You're an optimist, Brian. Instead, I see the power industry more likely claiming they need the new income from BPL to raise the additional funds needed to modernize the existing infrastructure. Industry has plenty of people to spin anything into a positive outcome for industry.

> Gee Carl, you're right. It's NOT 50%. Out of 5,020 votes, PCTA got 62% while
> NCTA got 33%. I'll take that split, Dee. ;-)

Me, too!

The 1996 READEX survey, paid for by ARRL, showed that 63% of members
PCTA and 30% NCTA (8% undecided). Nonmembers were 54% PCTA and 37%

NCTA (9% undecided).

This survey also showed something very interesting when age groups
were analyzed. All ages of members were majority PCTA. Here are the
results, PCTA/NCTA/undecided:

65+ - 65%/27%/8%
55 to 64 - 55%/36%/9%
45 to 54 - 66%/26%/8%
35 to 44 - 58%/34%/7%
25 to 34 - 52%/45%/3%
under 25 - 85%/15%/0%

Note that last result - the 24-and-unders are the strongest PCTAs!
These are the young people we are supposed to be wooing, right?

No wonder Len Anderson wants an age limit for a ham license!

>
> Yes, I do.

Me, too. The mere fact that someone hasn't done something doesn't mean
they are not in favor of it. Look at how many hams with code test
credit don't have Extras yet, more than 3 years since restructuring.
Is that an indication that the Extra license should be dumped?

Let's look at the "survey" that should have counted the most -
comments to FCC about 98-143. The majority not only favored code
testing but wanted either two code test speeds or three code test
speeds. Yet FCC overruled them.

I have a feeling that majority is going to get overruled again.

The Middle East problem could have been dealt with way back in 1956,
when we, along with the French invaded Egypt, to re-take the Suez
Canal, after Nasser nationalized it

IIRC it was Eisenhower, who demanded we got out and of course, we were
stupid enough to do just that!

I'll bet it would have been a different story if the canal had
belonged to the Americans!

Cheers
tox

Data on what specifics of the issue? eHam and ARRL have had surveys within
the past year that contradict Carl's statement. And I've already listed
these sources several times before. Must I keep repeating myself?

You are getting my statements mixed up other peoples. I have already
referenced the current data on ARRL membership, ham radio membership,
surveys on Morse code, etc. I then stated that the ARRL may very well be
wise to not take a stance on the issue since the split is roughly even and
no matter what stance they take, a significant number of hams will probably
be dissatisfied.

Carl has stated that most hams want Morse testing to go away and has
provided no data to support that. I and others have pointed out that the
data that does exist contradicts his "belief". These are the recent surveys

done on the various ham radio sites.

> that the demographic is heavily tilted towards the no code test side ...

What makes you think this? I'm not trying to be a wise guy, but I agree with you about the polls being self directing. Therefore are you operating on gut feeling, what your friends tell you, or what?

> thus,
> I believe that the ARRL stands to pick up more members than they stand
> to lose if they take a position that it's time for Morse testing to go.

It remains to be seen. Those for who the Morse test is too much trouble may not be bothered to join the ARRL either.

Actually, you chose the words.

> Why must we discuss documents which don't exist?

You brought up "FCC documents which don't exist".

> You must share space with Carl. It is as simple as that.

It is entirely likely that Carl and I will never have to share space on
the ham bands. We may or may not share space. Why are you having
troubles with the concept?

> > > > > > > Farnsworth exists as the de facto "code" exam, even though the

I mentioned something in Part 97 that was not under discussion and you
ask me a question relating to it. Now you need brackets. Whew!

> It implies that you don't know if its going to rain.

Again, it does not imply that I don't believe in rain. I may share
space with Carl and I may not. The previous sentence does not indicate
that I don't believe in sharing space.

> Besides, we were not discussing your beliefs. We were discussing your
> and Carl's priveleges. He has the same priveleges as you, regardless
> of your beliefs on the matter.

I've understood the matter of privileges all along. I don't believe
Carl will be using all of his.

I didn't say it wasn't. I said you tried to hide "Lennie" behind
them.

> I have, currently, six other screen names at AOL (including this one)
> but "Avery Fine" was NOT one of them. Never.

Uh huh.

> Yes, I've used the screen name of "Avery Fineman" in here and also
> identified myself at the end of the post.

You TRIED to make us think that "Avery Fineman" was someone OTHER
than you at one point. Being unable to rally any number of otherwise
credible posters behind your rants, you manufactured them.

Didn't work. Your ego overdrove your common sense and you got
caught. Sucks to be you.

> Apparently some in here are terribly uptight and can see no humor in

Roger,

You're newsgroup postings go way, way over the line. Do you really
believe that a jury would, after comparing your words to my words find
you the winner in a civil action?

If you're using language that you wouldn't want your mother or your wife
or your daughter or the kids in the neighborhood to see, then you
shouldn't be using it. You can take the first step in cleaning up the
newsgroups in which you participate.

Your recent stuff is an embarrassment to amateur radio, to Marshall
County and to West Virginia.

Roger,

Your inability to use language other than filth is simply amazing.
Again, you wouldn't use language like that in front of your family or
neighbors and I doubt you'd use it if I was standing in front of you.

Your "rights" end where you infringe on mine and those of others. If
you post in a public newsgroup and I am one of those who regularly read
that newsgroup, I AM minding my own business. This isn't some exchange
of filth between yourself and another party by private e-mail; it is
publicly posted. Why would you object to the people of Glen Dale seeing
what you've already posted for the rest of the world to see?

>

You keep putting out this misinformation. I know of no one who has not been
welcomed into ham radio. Everyone is welcom. As far as building circuits,
again everyone is welcome. When someone in our club mentions that they are
building something, others ask about the progress of the project and help if
needed.

> As, I have noted before, the quality of rf courses could be improved with
ARRL
> publications. The projects have real, rather than just textbook
applications.

>

It is not the business of a university or college to promote ham radio. The
university will have no higher percentage of hams than the general

population. Unless one is or wants to become a ham, there is no need for someone to attend ham club meetings. There is no requirement that EE professors be hams or need for them to be so.

> The ARRL should make more efforts in this area. This would increase the number
> of people in the hobby. Also, there is a strong connection between EE and
> amateur radio that is not being realized.

As with any organization, the ARRL has limited resources. They must pick and choose where to apply those resources. Recruiting new hams is something that can be done easily and cheaply by individual hams via word of mouth if they choose. It would be much more costly for the ARRL to try to do that recruiting as they would need to purchase advertising on TV, radio, and in the magazines and send recruiters out on lecture circuits to schools of all levels. They just can't do it.

WHAT?? The gurus have been bleating for years that the power
distribution infrastructure needs a cash infusion of somewhere in the
neighborhood of $50 to $100 *BILLION* dollars to catch up.

Never mind, you're either dumber than a box of rocks or an almost
decent troll. I rather suspect the former. Now go back to work and
finally figger out how to put up a pole to support yer scanner
antennas . .

Well-written petition. I personally oppose it, but it is well-written with what might be considered a logical rationale giving all of the justifications for the NCI position. It deserves a chance to be considered, in my opinion, and I hope that the FCC does issue a call for comments. They probably will not, believing that the recent reduction to very-slow-code (5 wpm) was a good compromise, i.e. not acceptable to either side. And, it is very recent. Having said that, I would hope that whatever the outcome, we should accept it and quit trying to change the law. This requirement certainly has had a good and lengthy hearing and additional work on this item is just a waste of time.

It is said that Isaac Newton spent the majority of his career trying to find the exact displacement of Noah's ark; in his spare time he discovered gravity.

Yes, referred to with a thinly-veiled attempt to dissuade others from
reading and considering all of those reasons.

> Look again at what I wrote:
>
> "Obviously the main request is to dump Element 1 ASAP."
>
> Which is true.

Yes ... what did you expect? That *IS* NCI's chartered goal.

What did you expect? That is what a Petition for Rulemaking IS ... a
specific
request(s) and all of the supporting arguments ... I *really* don't know
what
else you're asking for ...

> > I think that's important information for folks to consider ... that's
why
> > I encourage folks to actually READ and consider the NCI Petition,
> > rather than relying on your "5 cent synopsis."
>
> I've read and cosidered it, and I'm opposed to it.

Really? (what a surprise)

> > Why do you want to "save others the bother" of reading the Petition?
>
> Because we already know that it would contain a request to drop
> Element 1 and reasons to do so. Those reasons have been argued
> endlessly here and elsewhere.

The reasons elaborated in the Petition form the factual, legal, and
rational basis for granting the request ... I think they're presented
clearly in a well-organized manner that, in only 20 pages, tells a

a reader all they need to know to make an informed decision based
on the facts.

You don't WANT people reading it and coming to the logical
conclusion, IMHO ...

> My question was about what else was in the petition besides dropping
> Element 1 and reasons to do so.

That wasn't clear at all ... and why you would expect more escapes me,
since, as I pointed out above, all of the essential elements of a Petition
for Rulemaking are there (and you knew the what the goal of the Petition
would be before it was written ...)

> > (Could it be that you find the arguments so compelling that you don't
> > WANT others to read them???)
>
> Nope. None of the arguments are compelling at all. Not to me, anyway -
> YMMV. And we've all read them many times before.

OK, we disagree ... but I believe the FCC (and MANY amateurs) will
find the arguments compelling.

> I don't think the petition will change anyone's mind.

You HOPE not ... that's why you try to brush it off as somehow being
insignficant and "not worth the time to read." Interesting tactic, but
I doubt that it will work.

> > > The NCI petition consists of a request to drop Element 1 without

Yup ... and that's EXACTLY what's SUPPOSED to be there.

> > > > > As you have pointed out, Carl, FCC hasn't even given any of the

>
> That's the smart way to go. Focus on the core issue and don't be
> delayed or derailed by other issues.

Bingo ... and I don't believe that the FCC will allow this issue to
get bogged down with other unrelated issues. It's too clear-cut,
whereas other issues (band segmentation, privs by license class,
etc.) are clearly going to be harder to deal with because they are
not so clear-cut.
(They're also not NCI's charter, so they're not our "ox to gore.")

> There are supposedly four other petitions filed, too. Wonder what they
> say?

They basically say the same thing, in various levels of detail and
sophistication,
ranging from a 1-pager from a guy who's filed MANY (read between the lines)
to a few pages of generally well-considered material that doesn't have the
cites
to law, previous FCC decisions/determinations, etc. that NCI's has. They
all
add to the momentum, however ...

73,
Carl - wk3c

BTW, those who want to read the NCI Petition for Rulemaking and see what
Jim doesn't want you to see and consider can find a .pdf copy at
http://www.nocode.org under the "Articles" link.
However, a number of new articles have been added (other countries dropping
Morse testing ... Germany, Austria, Norway, and New Zealand have been added
to the ever-growing list), so you have to scroll down the Articles page a
bit to get
to the piece on the Petition ... :-)

Dick,

Did you (or the ARRL Board of Directors, more importantly)
EVER CONSIDER the POSSIBILITY that the nocoders are
staying away from the ARRL (in droves) because they don't
want to contribute dues to an organization that's been dedicated
(and still is, by policy) to keep them off of HF???

If the ARRL would "get with it" and actively, openly support this
inevitable change, rather than fighting to keep the nocoders off
of HF until the bitter end, they might be able to restore the goodwill
they've lost exactly because of their Morse policy ...

I'm going on what I hear from members, from clubs, from e-mails I
get from folks, etc. I'm ALSO going on the demographic of all those
nocode techs who could get on HF were it not for a stupid Morse
requirement ... do you REALLY think they are "hot to learn Morse"???
I don't ...

> > thus,
> > I believe that the ARRL stands to pick up more members than they stand

ARRL membership provides a lot of benefits through QST, the website,
and all of the good things they DO do for amateur radio. However, selling
those benefits is difficult when the prospective buyer is someone who knows
his/her membership dues are going to an organization that's dedicated by
current policy to keep them off of HF ... it doesn't take Einstein or a
Gallup
poll to figure that one out ...

I have ZERO doubt that the FCC will consider this matter.
It's merely a question of how soon and how quickly they move.

That's odd, Carl. I used the ARRL CD's to prepare for Element 1. When I had specific questions, league employees responded promptly via e-mail with helpful answers.

To this young (...and then no-code Technician class.) newbie, the ARRL actually appeared very dedicated to helping me get ON HF.

> If the ARRL would "get with it" and actively, openly support this

I'm a league member, Carl. I (...and I suspect many others.) have written the league informing them that I do NOT support the removal of Element 1. While I stopped short of telling them that my family membership was at stake, it may hve been inferred. (Fine by me.) I also made a point to inform them of our demographic, young newbies who are NOT put off by the code test and willing to meet the requirements for HF.

> And without the 52,990 increase in non-code proficient Technicians,

Dwight,

That 52,990 "increase" is not all new license issues.

Some of it is new hams getting their Techs.
Some of it is existing Novices upgrading by passing Element 2 (Tech written)
Some of it is existing Tech Pluses being renewed by FCC as Techs.

The latter two groups are codetested hams with HF privs. Some of the first group are codetested too, if they have passed Element 1 but not Element 3.

How "code proficient" any amateur is cannot be determined from license class alone.

>there
>would instead be a 7.85 percent decrease in overall numbers. Of course,
>that's a rough estimate - as rough as the numbers used in your argument.

The important point is that the number of US hams is growing at a slow rate. Restructuring did not result in a big change in growth. If Element 1 is dropped, it will be interesting to see if there is any significant increase in growth.

If it did indeed 'belong' to the Americans....then we would have given it
back. Look at the Panama Canal.

We don't have a colonial view on anybody. We made that mistake with the
Phillipines and Puerto Rico. And we still can't get rid of Puerto Rico.

Yep, I considered it, then rejected it as inaccurate. Nocoders aren't
about
to dole out $34 per year for *nothing* That's exactly what most of
then see
of value to them in ARRL membership, since they really aren't into ham
radio
beyond their HT, and have no use for al the many ARRL "bennies".

> If the ARRL would "get with it" and actively, openly support this

That's about as accurate as your prediction that no code will bring
hordes of geniuses into the hobby.

The crux of the matter is that the greater part of the power industry is
investor-owned. That says it all as to how easy this will be to win, etc.

1486. Wiseman's "Dictionary"....

Newsgroup: rec.radio.amateur.policy
Date: 2003-08-18 00:45:10 UTC
From: Ed Norton <haaaynorton@comnos.pam>
Message-ID: <bhp7iq$o0v$0@pita.alt.net>
Source record: 74899

These are only a few of the misspelled words I have seen in Wiseman's posts.
I guess he can't afford a spell checker.

"Champoin".Whassup, Wiseman? No dictionaries in the mental ward?

"Anoinymous"...a cross between anonymous and annoying?

"Acident" Roger's mom got preggers by accident.

"Alreaedy" Alright, already!

"Amouints" Roger amounts to nothing.

"Aposterphe" This guy is a hoot, ain't he?

"Basios"...word Woger uses when he gets neeeerrrrvous.
"Behing"...a cross between being and behind?

"Coiward" As in peeking from behind his mommy's curtains.
"Feamle"...I think he meant female.
"Losser"...only loser Roger can do it better.
"Ignroant"...typical, considering the source.
"Sluprs"...only Rogie knows what this means.
"Travelled"...a Rogerism, replete with ignorance.
"Postss"...pssst...Roger..that should be Posts.
"Defgenerate"...well, it's Roger's word...
"Faity"...he meant to say Fairy, but you know Roger.

"Ghet" Get a load of Curtain Boy!
"Distribiution"...Roger likes using phonics.
"Biotch"...he meant Bitch, but his phonics took over again.
"Methjadone"...a West Virginia substitute for Heroin.
"Sumbliminal"...one of Roger's favorites.
"Recepticle"...either of Roger's moist cavaties.
"Cociane"...a West Virginia drug of choice?
"Tiome"...Roger meant to say Time...but his fingers were numb.
"Beraking"...no definition. Could mean 'beraking' the leaves,
"Amny"...he meant 'any',
"Nlay"...a town in Maylaysia? Vermont?
"Al;ong"...only Wussman knows what this means.
"Becasu"...well, becasu Roger is not the brightest bulb on the tree.
"Seperation". Why? Because Roger cannot "seperate" from his mommie!
"Sisnce" He meant Since, but his pudgy little fingers slipped off the keys.
"gnetically" What?
"provce" (prove?)
"Piuzza" (West Virginia Pizza)
"Schol" (school?)

"strill" (still?)
"shoitgun" 12 ga or 20 ga?
"Snoip" (How they spell "snip" in Glen Dale)
"Maturbater". Wiseman does it all the time, he just can't spell it.(leaves a sticky residue on his right hand)
"Coskscuking". It's a Roger thing, as in Lavender Lads.
"Waddleing". Only in Glen Dale, eh?
"Spaeaking". Curtain Boy did this after his second retest.

" Stgop" Roger's version of Stop.

"Fahter's" He meant Father's Day.

"fserting"..would that be festering?

"poists". Roger meant "posts".

"snadwich" As in peanut butter and jelly?

"regualr" Glen Dale rendition of "regular".

"aftrer" After? Aftrer what?

"soory". Sorry Roger fucks up again.

"didnb't" He didn't?

"whoile". He ate the whoile thing?

"Woamn" He's hooked on West Virginia phonics, all right.

"prrof" And he kin prove it, too.

"beforfe" Was that before he lurned to spell?

"yoiuy" Roger's version of "y'all".

"illarate" Only illiterate Roger can spell like this.

"haeart" Aw, how heartless of me to laugh!

"valule" Roger has no values. No wonder he can't spell it.

"proch" Doesn't everyone have one on their house?

"inmstitution" Where Roger's mom put him in June 1999.

"timne" It's Howdy Doody time?

"whgo" What? Who dat?

"gnetically" Only Roger knows what this one means.

"crfy" Like, cry, Roger, cry.

"stutrtering" Some stutter, Wiseman stutrters.

"Whjere" Where is Curtain Boy?

"Webiste" That's Website to the rest of us.

"Youire" Your? You're? Who knows.

"fiored" As in fired?

"Parety" Roger gave a party once. Nobody came.

"Bouynce" Bounce?

"Varification" Verifiable mental case.

"Probelms" Poor Rogie.has many problems of the mental sort.

"Partricipate" Oh, DUH!!!!

"Cryed" Gee, Wogie..cry me a river.you dolt!

"Stoick" What a dork. His old 386 has no spell check program.

"Partiall" More WV Phonics, I see.

"Obsucred" Either obscured or Rogie has "sucre" on his mind.

"Infinate" Stupid. Think finite, Rogie.

"Sustinance" As in Sustenance?

"Juvinile". This is the way Roger likes his boys.

"Piut" Put it where, Rogie?

"Toyus". "Toyus R Us?

"Diminuative". Roger's height.

"Percriptions" Say what?

"Credibiliy" More Glen Dale intellect.

"Thsoe" Yet another Glen Dale gaffe.

BPL, if allowed, will put several states' statewide public service
agency radio system out of business, teo include California, which
also has a low VHF statewide radio system. So much for protection from
part 15 interference!

It is also difficult to call 20 police
> cars individually when you need a rapid response to a large problem as
> opposed to just pressing the button on a radio transmitter. I am very
> rapidly learning to dislike the present administration a *lot*.

If they ram BPL through in the face of massive negative evidence
there'll
be a whole lot of people feeling much more than just dislike!

An
> interesting aside with the power companies; Wall Street doesn't like them
> generating power. They simply want to buy power and resell it at a profit.
> Where is this power supposed to come from?

Do you ever get the feeling that Wall Street is more *the* problem
than the solution to our problems? The bean counters are in absolute
control and The Bottom Line rules. No matter who or what gets hurt,
nor how badly. If they have to send all our good jobs and
manufacturing offshore and rely on capitol gains to rake in all that
stock gain and profit, they'll do it in a heartbeat, regardless of
what it does to the country.

With all manufacturing jobs
> going offshore and no one interested in actually building (or generating)

Who on earth can tell? It's all speculation! When I was a tech, I wasn't a member of ARRL because it wasn't relevent to what I was doing. I joined after getting my General license. That may mean that you are right, or it may not. We are all acting on opinion here, and no hard data at all.

Do you think they have to cater to those who do not learn morse?

Okay, it's speculation. I guess it depends on who you hang out with. I
know a lot of people who don't like the idea of dropping the
requirement. And most of the tech's I know are pretty happy with their
lot in life. Just a comparison.

But they really do benefit the tech's also, Of course that all depends
on the level of interest in amateur radio to begin with. Whether they
are interested in the VHF or HF/MF aspect. Those are pretty much
different worlds.

Of course you must. We had to address and readdress all those Morse
Myths time after time, day after day, year after year.

As an ARRL member, I've yet to see them repeat the debacle that they
tried to pass off as a legitimate survey prior to the last
restructuring. Please tell me what issue it was published in and I'll
look it up.

As for eHam, I'm sorry but I've never heard of them.

> You are getting my statements mixed up other peoples. I have already

My main interest in amateur radio is HF Morse/CW operation, and designing, building, aligning, maintaining and restoring equipment to do so. I have other interests in amateur radio, too.

Others have different interests in amateur radio than I. They do their thing, I do mine.

But we are all radio amateurs.

You, Len, are not a radio amateur. Nor have you ever been one. Your sole interests seem to be in a few newsgroups.

>>> Those who do not believe that, that is to say that a Morse code test is

Anyone can originate questions and answers for the pools, and submit them to
the QPC.

However, changes the syllabus, testing methods, or other requirements require
FCC rules changes that are beyond QPC authority.

> wiith the "big gun contesters."

Your behavior here is often less mature than that of a typical six-year-old,
Len ;-)

Can you name any problems caused by the licensing of young children in the ARS?
Violations by them?
>
> Wow, that 14-year-old arbitrary limit sure must have stung you!

Not me. I'm 49.

Did you know that the 1996 READEX survey commissioned by the ARRL showed that
the age group that was most procodetest was the 24-and-younger group? 85%
procodetest, 15% nocodetest. The hams of the future...
>
>>- Eliminate all subbands-by-mode
>
> Blasphemy! Morsemen DESERVE elitism and their own private
> spectral playpen!

Sounds good to me. I say the FCC should make at least the lower 15% of each HF
amateur band CW-only.

Right now, the only amateur CW-only subbands are on VHF.

Would you rather eliminate the CW/data subbands, Len?
>

I don't give in to bad ideas. And my standards and practices are those of
today.

You live too much in the past, Len.

Dwight:

Belittling ham radio? Moi??? Hmmm, you may have a point there. Now that ham radio licensing requirements in the U.S. have been reduced to insignificance, and are about to be made a whole lot less significant when code testing is abolished, I guess one could make the point that there is a lot "belittleable" about ham radio these days! We are about to start the first "generation" of hams who have never been bothered to learn the Morse code, and will never know the benefits and advantages of the Morse/CW mode from personal operational experience. Now THERE's a perfect example of something that would inspire one to "belittle" ham radio, indeed!

Of course, Jim. I clearly stated my numbers were a "rough estimate."

> The important point is that the number of US hams
> is growing at a slow rate. Restructuring did not
> result in a big change in growth. (snip)

True. However, to make something out of that, one has to eliminate all factors outside restructuring. In my last message, I hinted at factors such as the attitude of current operators towards those new to ham radio. Today's new operator faces more ridicule and harassment than perhaps any new operator in the history of this activity. And lets face it, that new operator is not likely going to invite friends or family members to join after an negative exchange with Larry in this newsgroup (or someone like him here or elsewhere). Clearly, the attitude of current operators has a role to play in the lackluster growth of ham radio today, perhaps even far more than restructuring at this point.

Your problem is reading comprehension. The term was used as an example
of things we were not discussing.

> > > > > > > > > That would make you a fool.

I'm right on target, Brian.

Carl may or may not share space with me.
It may or may not rain.

Neither sentence implies disbelief on my part.

> I may share
> > space with Carl and I may not.
>
> You must.

I haven't shared space with him yet.

> > The previous sentence does not indicate
> > that I don't believe in sharing space.
>
> It indicates that you reject the concept of sharing space with Carl.

It may or may not rain. Rejection of the concept of rain is not
indicated. Work on your reading comprehension.

> > > Besides, we were not discussing your beliefs. We were discussing your

>
> Do you think he'll avoid 440 - 450 MHz?

Nope. Besides, he'd need one helluva signal for us to share space there.
Oddly enough, I have no difficulty working stations in his area on 432.

Excuse me? You posted a message speculating that the current power outages will hinder BPL and I responded with my opinion that the power outages will more likely be used to support BPL. To that, you respond with the garbage above. You really need to learn some basic manners, Brian.

Why no, Roger. Apparently it is difficult for you to understand their typical posts compared to your own.

> You don't go to their local ARES meetings to try to harass them, do > you?

Why, Roger, "your" local ARES meetings are my local ARES meetings. You signed on for membership the same evening as I did. The only difference is, you haven't been back.

> The only reason you do is because Wiseman resides in the same county
> as you do...it all probably stems from the fact you look like Baby

That's quite a statement, Roger. So I attend ARES meetings because you live in this county? Maybe you believe that you live in the same county because you believe I had difficulty in school. I'm sure you'll issue a correction.

> You have just proven that you are a whining, Anti_American, facist > <expletive deleted>.

How has that been proven--by your peculiar notion that we attended the same meeting?

> Now, go to school, FATASS:

Sorry, I've finished my schooling.

> (a)Any person who willfully and repeatedly follows and harasses a > person with whom he or she has or in the past has had or he or she > seeks to establish a personal or social relationship<...>

That's nice. We haven't had a personal or social relationship and I don't wish to have one.

> <expletive deleted> High-el, NOBODY wants to have _any_ kind of > relationship with you......unless they're your desperate wife or gay > lover Bertie,

Oh, that's silly, Roger. I have numerous social relationships here, in other parts of this state, in other states and in other countries.

How would you know about any of them?

> I don't want one now, in the past or in the future, but you still try > to suppress the freedom of speech in which you are told that YOU ARE > AN <expletive deleted>.

I'm sure you don't mind that I've suggested for anyone who is interested to check out both Google's web and newsgroup search engines for examples of your "free speech". Searches under "Roger Wiseman", "KC8JBO" or "AB8MQ" will yield an abundance of examples.

I've already reposted our exchanges earlier, Roger. Your filth led to the ruin of the rec.radio.amateur.misc newsgroup. Your absence after getting the boot from a couple of ISP's was a breath of fresh air. My comment to you was not a threat, it was a question. After all, your usenet posts are already public.

> Not to mention how you run to your neighbor's houses, phone booths in > restaurants, etc. and call Wiseman......

That's absurd. If you have any proof of such activity, take it to the local authorities.

> <continuing>
> (1) "Harasses" means willful conduct directed at a specific person or > persons which would cause a reasonable person mental injury or > emotional distress.

You already came with the mental injury and emotional distress. Google knows. Your bilious vile in usenet was present before I returned to the U.S.

By the way, did you realize that the material you quoted above fits you to a tee? You've posted outright fabrications about any number of people. If they ever got together on this stuff, you could go away for a long time.

Pussy.... Cry, you fucking PUSSY. Nice of you to admit that you gave Stenger that blowjob.

> many anonymous remailer identities, Roger.

But you blustered that you would try to stop me from posting that way, looks like you are out of your league, situation normal, eh, baby huey? How that must make you look in the eyes of the newsgroup. The fatassed, radio "god" with the bad comb-over looking so desperate.

> Now you're using my e-mail
> address.

Don't cry fatass...you might actually have some clean clothes for a change.

> What, by the way, is your fixation on Lackland AFB? I haven't been
> there for over 32 years. I note your attraction to the material on my
> web site.

You mean that freshman attempt at a website. Nice of you to include info on that whore mommy Terry.
You mean where you were forced to be a press release boy because of your piss poor service record? High-el was in the brig more than out. You had a crappy job in 'nam that you fucked up and was sent back home to paper shuffle in the press release department. Then, after getting yet another early retirement you were a courier for the State Department, where you continued your pattern of fucking up on the job until they gave you yet another early retirement.

> Anyone interested in finding out more about Roger's activities can do a
> google web or newsgroup search on "Roger Wiseman", "KC8JBO" or "AB8MQ".

And they can google Dumbass Dave Heil's hostile and belligerent comments there as well. What about your comments to Carl Stevenson and Lenny,and let's not forget Kim, Dicksucking Davey?

> If you don't have strong stomach, skip it.

Not everybody has a sagging, bloated stomach like you do, ASSHOLE. Incidentally, Goatblower, try taking a fucking bath, you smell worse than those goats you blow out at your trailer in Cameron.

> http://www.arrl.org/news/enforcement_logs/2000/0719.html

Mheh. That the best you can do, Goatblowing High-el? A three fucking year old letter about a retest, which Roger passed, a letter to Roger and another ham advising them not to take their disagreements on the air, something you should heed, since that's what you do , and a warning letter from 1999 in which false information was submited to the FCC. Roger never lost his license, never was fined, never was suspended. Looks like you made a complete ASS of yourself on that one, but that situation is completely status quo for you, ASSHOLE High-el.

And Goatblowing Dave High-el _is_ registered as a sex offender....

And the worst example (in modern times, too, and cannot
be dismissed as the colonial morals of a far-distant age)
is the island of Diego Garcia where the invading Brits
forcibly removed all the natives in order to give the
island to the Yanks as an aircraft carrier. Until the Yanks
and the Brits refuse to have anything to do with the island,
then their actions in the Malvinas and in Kuwait are pure hypocrisy.

Not really. You gave the main website and left it up to the reader to find the
article, then download it and open it as a pdf.

If you really wanted people to read it, you'd have it front-and-center on the
webpage and post a direct link.
>> > >

>> Yup. And that was already referred to.
>
>Yes, referred to with a thinly-veiled attempt to dissuade others from
>reading and considering all of those reasons.

Not at all. My main concern was whether there were other things in the
petition, such as written test changes, license class changes, etc. There
weren't.
>
>> Look again at what I wrote:
>>
>> "Obviously the main request is to dump Element 1 ASAP."
>>
>> Which is true.
>
>Yes ... what did you expect?

I expected that much. It's the unexpected that I was concerned about.

Since NCI does not want me as a member, and keeps its internal policy functions
secret, I was simply asking for a quick indication of what other issues would
be covered.

> That *IS* NCI's chartered goal.

And it's a good thing they are sticking to it, rather than getting bogged down
in other issues.
>
>> "And there's probably lots of reasons given for doing so, including
>> the
>> Commission's own words "no regulatory purpose"."
>>

>> reasons to drop Element 1.
>>
>> And the correct answer is: NOTHING. The petition consists of a request
>> to drop element 1 and reasons to do so.
>

>What did you expect?

See above.

> That is what a Petition for Rulemaking IS ... a
>specific
>request(s) and all of the supporting arguments ...

Those specific requests could be anything.

> I *really* don't know what else you're asking for ...

Here, I'll spell it out for ya:

You could have simply answered my question this way:

'NCI requested the immediate removal of Element 1 for all classes of license
and the granting of Novice/Tech Plus privileges to all Technicians. Detailed
supporting arguments were included in the proposal. No other changes were
requested because they fall outside the stated purpose of NCI."

One paragraph. Three sentences. Short sweet and concise. 100% accurate. Would
it have been so hard to have answered my question that way?
>
>> > I think that's important information for folks to consider ... that's
>> > why
>> > I encourage folks to actually READ and consider the NCI Petition,
>> > rather than relying on your "5 cent synopsis."
>>
>> I've read and cosidered it, and I'm opposed to it.
>
>Really? (what a surprise)

Yes, really.
>
>> > Why do you want to "save others the bother" of reading the Petition?
>>
>> Because we already know that it would contain a request to drop
>> Element 1 and reasons to do so. Those reasons have been argued
>> endlessly here and elsewhere.
>
>The reasons elaborated in the Petition form the factual, legal, and
>rational basis for granting the request ... I think they're presented
>clearly in a well-organized manner that, in only 20 pages, tells a
>a reader all they need to know to make an informed decision based
>on the facts.

My summary, above, boils it down to three sentences.
>
>You don't WANT people reading it and coming to the logical
>conclusion, IMHO ...

Not at all! Did I say anyone should not read it? Of course not! I simply wanted
to save the time of wading through 20 pages of same-old same-old looking for

something new.
>
>> My question was about what else was in the petition besides dropping
>> Element 1 and reasons to do so.
>
>That wasn't clear at all ...

Sure it was...if you read what I wrote.

>and why you would expect more escapes me,
>since, as I pointed out above, all of the essential elements of a Petition
>for Rulemaking are there (and you knew the what the goal of the Petition
>would be before it was written ...)

Because there is always the chance that something unexpected would be in there.

>
>> > (Could it be that you find the arguments so compelling that you don't
>> > WANT others to read them???)
>>
>> Nope. None of the arguments are compelling at all. Not to me, anyway -
>> YMMV. And we've all read them many times before.
>
>OK, we disagree ... but I believe the FCC (and MANY amateurs) will
>find the arguments compelling.

Sure. They've already been convinced. Did not FCC write, almost 4 years ago,
"no regulatory purpose"? Those three little words say it all.
>
>> I don't think the petition will change anyone's mind.
>
>You HOPE not ... that's why you try to brush it off as somehow being

In your opinion. Do you dictate NCI policy, Carl, or is it formulated by the
Board? I'm an outsider, remember - not even privileged to know how many
members NCI has.
>
>> > > > > As you have pointed out, Carl, FCC hasn't even given any of the

>etc.) are clearly going to be harder to deal with because they are
>not so clear-cut.
>(They're also not NCI's charter, so they're not our "ox to gore.")

Maybe. OTOH, if the issue is that clear cut, why is FCC dragging its feet? I actually thought the main delay would be ratification, and that the removal of Element 1 would be a quick MO&O thing. Now it looks like the whole NPRM cycle will be invoked. A year - 2 years....?

>> There are supposedly four other petitions filed, too. Wonder what they
>> say?
>
>They basically say the same thing, in various levels of detail and
>sophistication,

Not many lines to read between in a one-pager...

>to a few pages of generally well-considered material that doesn't have the
>cites
>to law, previous FCC decisions/determinations, etc. that NCI's has. They
>all
>add to the momentum, however ...

Maybe. NPRM means comments...

I urge all to read the NCI proposal and consider the arguments contained therein. I don't agree with them or find them compleiing - maybe others will.

Then explain exactly how/why you think the introduction of BPL will
impact the economics of upgrading the power grids, e.g., how big a
chunk of the $50-$100 billion dollar upgrade tab do you expect BPL
would raise for that cause?

> To that, you respond with the garbage

Speak for yourself, Carl. I certainly did NOT have to jump through any
hoops. I set a goal, researched the requirements, and then set about meeting
said requirements.

I also make sure that in all the letters and e-mails I send to the league,
FCC, political reps, etc. I inform them that the current Morse code test was
no barrier for this newbie and did NOT "force" me to jump through any hoops.
So please don't allow any individual or group promoting the "barrier/hoop"

line of Bravo Sierra to include me in their demographic. I suspect there are more NTs (As opposed to OTs or OFs) like me who dislike being associated with underachievement. I hope they too will take the time to make their views on the matter heard.

the
> webpage and post a direct link.

That's not the way the website is structured ... I inherited the structure
and

have been too busy with more important things to change it.

Besides, it works ... it's easy to find the Articles link (QUITE prominent
in
the "toolbar" in the upper left), then scroll to the article you want.

As far as the link to the entire Petition in .pdf goes ... .pdf is a
widely-accepted
way of distributing docs that can be read on virtually any computer/OS
platform
(the doc looks exactly the same on my Linux machine as on my WinDoze
machine)

It's also the exact same document that was printed to file with the FCC, so
the
content and formatting are exactly what we filed, no ifs, ands, or buts ...

> Not at all. My main concern was whether there were other things in the
> petition, such as written test changes, license class changes, etc. There
> weren't.

Not NCI's charter ... we've always said that the accusations that we
had an agenda to "gut" the writtens and other such falsehoods and inuendo
were untrue. We've proved it by asking for exactly what we said we
wanted to achieve all along.

> >> Look again at what I wrote:
> >>
> >> "Obviously the main request is to dump Element 1 ASAP."
> >>
> >> Which is true.
> >
> >Yes ... what did you expect?
>
> I expected that much. It's the unexpected that I was concerned about.

And why did you "expect" something "unexpected" ??? NCI has always
been totally up-front about its goals ...

> Since NCI does not want me as a member, and keeps its internal policy
functions
> secret, I was simply asking for a quick indication of what other issues
would
> be covered.

If you support continued Morse proficiency testing, you don't meet the
qualifications for membership ... if you honestly change your views, we'd
welcome you as a member, same as everyone else.

> >You don't WANT people reading it and coming to the logical
> >conclusion, IMHO ...
>
> Not at all! Did I say anyone should not read it? Of course not! I simply

wanted
> to save the time of wading through 20 pages of same-old same-old looking
for
> something new.

You said "save others the bother" of reading the Petition ... which is
tantamount
to encouraging others to not read it ...

> >and why you would expect more escapes me,
> >since, as I pointed out above, all of the essential elements of a
Petition
> >for Rulemaking are there (and you knew the what the goal of the Petition
> >would be before it was written ...)
>
> Because there is always the chance that something unexpected would be in
there.

So, you also insinuate that NCI *might* be dishonest about its agenda/goals
and "try to pull a fast one on you"???

We've said all along what our goals are ... the paranoia of the PCTA is what
has been the source of all sorts of ridiculous FUD about "NCI's hidden
agendas"
and "what NCI will do AFTER the code test is gone."

> >> > > The NCI petition consists of a request to drop Element 1 without

No, I do NOT dictate NCI policy ... it is formed by the Board, with input
from the membership. I'm just telling you the reality that "the Petition
has
exactly what's supposed to be there" ... in other words, it's what was
approved
by the Board.

Ratification is not necessary for the FCC to act ... that's spelled out clearly in law ... heck the Senate is SEVERAL WRCs behind in ratification ... the FCC is sending them a "catch up" package. But, again, that has no bearing on the FCC's ability to act on the changes in Article 25.

We shall see what course the FCC takes on this matter ... as they say, "It's not over until the fat lady sings."

> Maybe. NPRM means comments...

Been there, done that ... the facts haven't changed, except in NCI's favor in terms of the progress of technology making the "need" for Morse less and less with time, and the changing demographic of the US amateur population.

> I urge all to read the NCI proposal and consider the arguments contained
> therein. I don't agree with them or find them compleiing - maybe others

OK, thanks Jim ... I appreciate your gesture. It's certainly better than implying
that reading the Petition would be a waste of time.

autopatch is a way of making phone calls through a repeater. you usually have to dial some kind of access code on your touchtone mic and then dial the number. most repeaters restrict the calling area and may have other restrictions and membership requirements. you should contact the owner of the repeater or the club that runs it for specific information.

Okay. Carl's (NCI's?) approach sounds reasonable and should work okay -
even though I disagree with it.

On the other end of the spectrum, the proposal to turn everyone into HF
weenies is just plain stupid in my book.

>> But the fact is that since if the test disappears and nothing else

The times do change, no doubt. It all comes back to my thinking we can
be as adroit as we want to be. On that spectrum, it varies from no test
whatsoever - proven by the many CB'ers who run power amps, to those who
think that a person needs to be an EE to get on the air.

What do WE want? I want the ham to have enough knowledge to get on the
air safely, to realize that he or she can do some nasty things to

themselves and others if they aren't careful. I want the ham to be able to read instructions and comprehend them. I want them to know at at least a superficial level just what their rigs are doing. I want the ham to know where to look up things like band edges and allowable powers on a band. I want the ham to know that they are expected to act like they learned manners at some point. I want the ham to know basic theory such as Ohms law, and very simple antenna design.

Oh, and BTW, I want the ham to know how to communicate at what I consider the base mode - CW.

This is just my opinion.

> For example: How many hams do you know who use barefoot rigs that

True. That is one of the reasons that I like the idea of having a bit of challenge to the tests. I'd wager that those who are willing to put forth extra effort are more likely to be an asset to the ARS than those who aren't. All this is on average, and does not apply to the individual ham.

> "Radio" and "electronics" are such wide-ranging subjects that nobody

And how! The idea that we are going to get EE's in here is essentially meaningless. It should be changed to RF engineers.... and of course the ones who want to have their hobby also be their vocation. It takes a special person indeed.

Thanks for the link to your proposal, Carl.

A question though. I notice that the proposal to drop element one is there, but why doesn't the proposal rename the other elements so that they are in sequence?

I've been around enough of these sort of documents to know that sooner or later it will have to be changed.

Would you cut it out!

You're making it really difficult to have a serious discussion with Dave.

Oh, nevermind. There never could be a serious discussion with Dave.

Well, if you don't like ham radio today, perhaps you should find another hobby. Only a masochist would continue doing something that makes him or her miserable. Ham radio is moving in a direction opposite from what you seem to want and is not likely to move in the direction you want anytime soon. When that happens, you either learn to live with it, walk away, or continue to be miserable. If you choose the later, it is rather sleazy of you to take your misery out on the new members of this activity. They didn't ask for your negative garbage (none of us did), and this activity certainly would be far better off without it.

> everything.

No-code isn't a religion. No Mantra.

The Mantra has always been that:

1. The Code always gets thru
2. The Code will keep out the riff-raff
3. The Code requires just the right amount of suffering to prove ones devotions

Aaron Jones keeps the other 47 Mantras.

Nor did I find Morse to be a barrier. Just as you did, I researched the requirements, investigated study methods, and then proceeded to fulfill the requirements. Although I did not use the mode all that much at first, I find in the last two years that my usage is growing by leaps and bounds.

As a supporter of Morse, I've recently sent in my membership request to FISTS. I'll also be putting together a "learn/improve your Morse code" class for our club sometime this year.

The CB band, being between the 10m and 12m ham bands, will follow the same physics of radio propagation as the surrounding ham bands. When conditions are good, you can work the world on a few watts. When conditions are bad, all the power in the world won't help.

All you have to do is denounce the code exam as the true saviour of
amateur radio, join the organization, and issue such a statement
yourself.

> One paragraph. Three sentences. Short sweet and concise. 100% accurate. Would
> it have been so hard to have answered my question that way?

Yet you have arrived at a short, sweet, concise, and apparently 100%
accurate answer without any help from Carl. The mind is a powerful
tool, isn't it?

> >> > I think that's important information for folks to consider ... that's

Why does the government drag its feet? It took 10 months to hire a
Sky Marshall after 9/11, and you want them to address the code exam
issue within moments of the end of the meeting?

> >> There are supposedly four other petitions filed, too. Wonder what they

>
> 73 de Jim, N2EY

I encourage all thinking people to read and consider the proposal,
especially should the FCC address it through an NOI or NPRM.
Participatory government fails when citizens don't participate.

I feel that if/when the FCC authorizes this trash the NTIA will way in.
Just like they did with the 5 mhz deal. If you don't know NTIA is the
agency that takes care of EVERYTHING else in the RF world that the FCC
don't. Such as FEMA, Military...etc frequency allocations and assignments.

Even after all this and if it fails to knock some sense into the FCC then we
can try congress intervention. Like what happened when the FCC wanted to
increase the monopoly of large corporations to own more media access
systems.

And if that don't work, which it likely will, we can all just fire up a lot more often with a lot more power.

In a short while the problem will be over. Because if it bugs us I'll guarantee we will trash it.

No my dear sir I am not acting like that idiot. I am simply trying to state that since this country is at WAR. And those you feel so tender toward ARE trying to KILL every American they can. THen then are indeed ENEMIES in a time of WAR. And deserve NO QUARTER, NO TRIAL, perhaps a military tribunal and then we shoot them.

Yes I missed the US Virgin Islands. They are a protectorite and remain so
WILLINGLY. As for Gitmo. We LEASED that fair and square. And the lease is
STILL VALID. And Guam has had the chance to clear out. THey choose not to.

As for the 'other' Pacific islands...would you perhaps be refering to the
Marshals? The ONLY Island that was nuked was BIKINI. No others. It is
part of a several hundred mile string of islands that are now INDEPENDENT
and have been from several years.

Gets your facts please....Oh BTW I was in the Marshalls in the 80s.

I'm just a month away from nailing both my technician and will be for sure, chasing after that general license. (I'm getting both books) I've been studying like mad, and I've even gotten to where I could do 5 wpm morse code already. I'm pretty much going to jump right into all this. That being said...

I'm probably not going to be buying brand-spanking-new gear. But I want something of a transciever. A tabletop unit... Could any of you vets suggest a good brand? I'll have about $700.00 to work with.

>>
>> I expected that much. It's the unexpected that I was concerned about.
>
>And why did you "expect" something "unexpected" ???

Some time back a petition was filed by the Central States VHF Society. IIRCm
that petition sought to replace the 100 kHz CW-only subbands on 6 and 2 meters
with 300 kHz wide "narrowmode" subbands. I think it may have also involved
small parts of 222 and 432 MHz. The petition sought to create a "weak signal"
haven from FM and other "wide" modes.

The CSVHFS petition had nothing to do with code testing or license
requirements. The subbands requested in the petition would have been open to
all hams except Novices. The subbands requested represented a tiny percentage
of the bands involved (7.5% or less) and would have been open to many modes
besides CW/Morse.

NCI vigorously OPPOSED that petition, even though it had nothing whatsoever to
do with code testing. I clearly recall the catchphrase "no setasides for legacy
modes!".

You were saying about "not in NCI's charter"? Perhaps NCI learned from that
experience...

>NCI has always been totally up-front about its goals ...

"No setasides for legacy modes"? Ahem....
>
>> Since NCI does not want me as a member, and keeps its internal policy

>We've said all along what our goals are ... the paranoia of the PCTA is what
>has been the source of all sorts of ridiculous FUD about "NCI's hidden
>agendas" and "what NCI will do AFTER the code test is gone."

CSVHFS petition......

After the last code test is gone, NCI will cease to exist, right?

>> >> > > The NCI petition consists of a request to drop Element 1 without

>> cycle will be invoked. A year - 2 years....?
>
>Ratification is not necessary for the FCC to act ... that's spelled out
>clearly in law ...

Yet a few weeks ago another NCI board member thought we'd have to wait for
ratification. So did I. We were mistaken.

>heck the Senate is SEVERAL WRCs behind in ratification ..

Not the Senate. They can't ratify what has not been sent to them by the State
Dept.

> the FCC is sending them a "catch up" package.

I thought it was the State Dept.

>But,
>again, that has no bearing on the FCC's ability to act on the changes
>in Article 25.
>
>We shall see what course the FCC takes on this matter ... as they
>say, "It's not over until the fat lady sings."
>
It may take her two years to get to the stage, though.

>> Maybe. NPRM means comments...
>
>Been there, done that

Yes - the MAJORITY of comments to 98-143 wanted at least two code test speeds.
So the nocodetest position is a minority view. I recall someone here saying
something about how 'those in the minority should take 'no' for an answer and
get on with life' or words to that effect. Wasn't a PCTA who wrote that,,,,

>... the facts haven't changed, except in NCI's favor
>in terms of the progress of technology making the "need" for Morse less
>and less with time,

Is it about the MODE or the TEST?

>and the changing demographic of the US amateur population.

Hmmm...back in 1996, the ARRL/READEX poll (which was a random group, not self-selected) showed that the procodetest opinion varied with age. Oddly enough, the YOUNGEST group (24 and under) were the MOST procodetest! 85% procodetest vs 15% nocodetest. Almost 6 to 1 - and these are the YOUNG PEOPLE whom we are told are the FUTURE of amateur radio. Shouldn't we listen very hard to what those folks say?

The oldest of those folks are now 30 or 31.
>
>> I urge all to read the NCI proposal and consider the arguments contained
>> therein. I don't agree with them or find them compleiing - maybe others
>>will.
>
>OK, thanks Jim ... I appreciate your gesture. It's certainly better than
>implying that reading the Petition would be a waste of time.

And you say the PCTA are paranoid?

Here's that URL again:

http://www.nocode.org/articles/NCI_Pet_RM.pdf

I don't find any of the arguments convincing at all. But it's FCC that matters, and they're already sold on the idea.

Well, that's a few percent of all posters to rrap.

Evidently you thught you had a point but discovered you were still wearing
it as headgear.

So you're clearly hearing just what you want to hear.If you'd tunein
the low end of the 40 meter band some night you'd hear the real
evidence.

I'm ALSO going on the demographic of all those
> nocode techs who could get on HF were it not for a stupid Morse
> requirement ... do you REALLY think they are "hot to learn Morse"???
> I don't ...
>

They make it clear they're not "hot to get on HF" either. If they
were
they'd be doing juste as Bert, Dee and Mike have done, and work toward
meeting the requirements instead of ranting and bitching about a
mundane *verey* minimal Morse code test.

> > > thus,
> > > I believe that the ARRL stands to pick up more members than they stand

At $34 per year there'll never be any large percentage of the
minimally interested joining the ARRL, whatever the code test is or
isn't.

>
> ARRL membership provides a lot of benefits through QST, the website,
> and all of the good things they DO do for amateur radio.

Very little if any of which is of any interestinterest to the HT
jocks.

However, selling
> those benefits is difficult when the prospective buyer is someone who knows
> his/her membership dues are going to an organization that's dedicated by
> current policy to keep them off of HF

None of which is in the least applicible to those who have no
interest in joining in the first place.

]

With all due respect, Carl, I don't think that "self selected sample" is
representative of the entire amateur radio community. And I don't think you are
a totally objective observer...;-)

>I'm ALSO going on the demographic of all those
>nocode techs

Which demographic? The ARRL/READEX poll of 1996 showed that the youngest hams
were the most procodetest. Bert Craig, WA2SI, has told you here that he does
not consider Element 1 a "barrier" or "hoop". Other newcomers have said the
same thing. Don't they count?

>who could get on HF were it not for a stupid Morse
>requirement ...

Hmmm...."stupid Morse requirement"? It's been passed by elementary school
children, old people, people with severe disabilities, and everything in
between. Heck, under the old rules we had at least one 8 year old Extra!

The fact is that if Element 1 is dropped, all those non-code-tested Techs will
gain some SSB on 10 meters and four slices of HF CW. (Ironic) In order for them
to get more, they have to jump through another hoop...I mean, pass another
written exam.....;-)

You may not think the General or Extra writtens are very hard, nor that they are "unreasonable", but the fact remains that they have not been shown to be necessary for safe and legal operation of an amateur station.

Why is a Tech considered qualified to use any authorized mode/freq above 30 MHz but unqualified to use all but CW and SSB on a few narrow slices of HF?

>do you REALLY think they are "hot to learn Morse"???

Some of them are. Others aren't.

>I don't ...

With all due respect, Carl, I don't see you as a good spokesperson for the CW/Morse mode....
>
>> > thus,
>> > I believe that the ARRL stands to pick up more members than they stand

>> may not be bothered to join the ARRL either.
>
>ARRL membership provides a lot of benefits through QST, the website,
>and all of the good things they DO do for amateur radio.

Sure - but a lot of hams, of all license classes, don't see those things. Or they aren't interested. I know at least one ham here who gave up on HF because she doesn't like the noise and distortion of HF. And, comparing even the best HF SSB to typical VHF/UHF FM, I can understand her point of view.

Some are still mad about incentive licensing, of all things.

One of the real problems with the Tech license being defacto the entry-level is that, for the most part, beginners nowadays are VHF/UHF centered, with their main focus on voice operation and manufactured equipment. Those things are not bad of themselves. They do, however, tend to distract new hams from nonvoice modes, building their own equipment, and national interests vs. local ones. IOW, they are more likely to join a local radio club than the distant ARRL.

>However, selling
>those benefits is difficult when the prospective buyer is someone who knows
>his/her membership dues are going to an organization that's dedicated by
>current policy to keep them off of HF ...

That's simply not true. Everyone has the same opportunity to pass the required tests - code and written - and get whatever license they desire. There is no policy to keep anyone off HF.

There is also the option of becoming a member, electing new directors, and changing the policy.

>it doesn't take Einstein or a Gallup
>poll to figure that one out ...

How about the ARRL/READEX poll, and what it told us about hams under 24? 85% of them were procodetest. Do you think that number has radically changed since then?

The nocodetest position may carry the day when all is said and done. And then we may well find that the whole issue was a red herring.

Consider this, Carl:

Once the license is in hand, getting on HF can be quite daunting for the newcomer, compared to VHF/UHF.

All a newbie needs on VHF/UHF is an HT, if they are close to repeaters. For a few dollars more, they can have a nice base/mobile duobander with antennas that mount on TV hardware, and/or in the car with a few wires and a magmount.

HF requires much more hardware, big antennas, and a whole pile of other stuff. There are 9 bands and a bunch of modes. Propagation varies all over the place, and mobile is a different game altogether. More time, more space and more money. If you have CC&Rs, things get even tougher.

You have a new house with plenty of space and more resources than perhaps 99% of the rest of us, Carl. What sort of HF station do you have? Yes, I know you're busy - we're ALL busy, though.

Surf on over to

http://www.dell.com

and check out what sort of computer setup $500 to $1000 will buy. That's the competition.

Well,well... Who was that satirest who used to write a column
entitled "Pardon, your slip is showing"?

I just read in another venue, this from a OT ham who was first
licensed morehan a half-century ago..

"review on eHam.net, a ham radio grand central station which I
financially support, although that is optional.."

So we can easily see why it is you "never heard of it". You've been
sorta distracted for the past couple decades, what with dodging all
those hoops and such.

No. See attached news article:

Special Dispatch Series - No. 553
August 19, 2003 No.553

Al-Qa'ida Claims Responsibility for Last Week's Blackout

Al-Qa'ida's Abu Hafs Brigades has claimed responsibility for "Operation Quick Lightning in the Land of the Tyrant of this Generation," referring to the blackout last week in the Northeast and Midwest United States. A communiqu&#65533; by the Abu Hafs Brigades was published at http://groups.yahoo.com/group/abubanan2/message/330. This is the third communiqu&#65533; by the "Brigades" that is being published by the same web-group; in the first, they accepted responsibility for the downing of an airplane in Kenya. The second accepted responsibility for the Jakarta bombing of the Marriott hotel on August 5, 2003.

The new communiqu&#65533; says that in compliance with the orders of Osama bin Laden to strike at the American economy, the Brigades struck two important electricity supply targets on the East coast. The Brigades say that they cannot reveal how they did it, because they will probably have to use the same method again soon. The communiqu&#65533; also claimed that the operation was meant as a present for the Iraqi people.

The following are excerpts from a report by the London-based Arabic daily Al-Hayat about the communiqu&#65533;: [1]

The Blackout was 'a Realization of bin Laden's Promise to Offer the Iraqi People a Present'

"A communiqu&#65533; attributed to Al Qaeda claimed responsibility for the power blackout that happened in the U.S. last Thursday, saying that the brigades of Abu Fahes Al Masri had hit two main power plants supplying the East of the U.S., as well as major industrial cities in the U.S. and Canada, 'its ally in the war against Islam (New York and Toronto) and their neighbors.'

"The communiqu&#65533; assured that the operation 'was carried out on the orders of Osama bin Laden to hit the pillars of the U.S. economy,' as 'a

realization of bin Laden's promise to offer the Iraqi people a present.'

'The Americans Lived a Black Day they will Never Forget'

"The statement, which Al-Hayat obtained from the website of the International Islamic Media Center, didn't specify the way the alleged sabotage was carried out. The communiqu&#65533; read: 'let the criminal Bush and his gang know that the punishment is the result of the action, the soldiers of God cut the power on these cities, they darkened the lives of the Americans as these criminals blackened the lives of the Muslim people in Iraq, Afghanistan and Palestine. The Americans lived a black day they will never forget. They lived a day of terror and fear. a state of chaos and confusion where looting and pillaging rampaged the cities, just like the capital of the caliphate Baghdad, and Afghanistan and Palestine were. Let the American people take a sip from the same glass.'

'The U.S. will not Live in Peace until Our Conditions are Met'

"It added: 'we heard amazing statements made by the American and Canadian enemies which have nuclear physics universities and space agencies, that lightning hit and destroyed the two plants. And we are supposed to believe this nonsense. If the blackout occurred in one or two cities, their lie would have been credible. But the fact is that the blackout hit the entire East and part of Canada.'

"The communiqu&#65533; continued: 'one of the benefits of this strike is that the U.S. will not live in peace until our conditions are met, such as releasing all the detainees including Sheikh Omar Abdulrahman, and getting out of the land of the Muslims, including Jerusalem and Kashmir.'

"The authors of the communiqu&#65533; said that the strikes aimed at 'hitting the major pillar of the U.S. economy (the Stock Exchange). [and] the UN, which is opposed to Islam, and is based in New York. It is a message to all the investors that the U.S. is no longer a safe country for their money, knowing that the U.S. economy greatly relies on the trust of the investor.'

'The Gift of Sheikh Osama bin Laden is on Its Way to the White House'

"The communiqu&#65533; mentioned that some economists said the blackout in the U.S. and Canada would cost the U.S. Treasury no less than ten billion U.S. dollars and in order to 'break the hearts of U.S. officials, just know that the cost paid by the Moujahideen to sabotage the power plants was a mere seven thousand dollars. Die of sorrow!'

"The communiqu&#65533; ended with: 'we tell the Muslims that this is not the awaited strike, but it is called the war of skirmishes (to drain the enemy), and that the American snakes are enormous and need to be consumed and weakened to be destroyed. We tell the people of Afghanistan and Kashmir that the gift of Sheikh Osama bin Laden is on its way to the White House; then the gift of Al Aqsa, and do we know what is the gift of Al Aqsa, where and when? The answer is what you are seeing!'

From (Daniel J. Morlan)

>The new Name will be CBerHams.
>
>I take it this is your expression of distaste for the lowering of
>standards to get a ham license?

You are mistaken. The license is an Amateur Radio license, not a "ham" license as you state above.

You really should follow what's going on. The standards have not been lowered to get an amateur radio license- the code requirement may be dropped.

Also, not that the code requirement MAY be dropped. It hasn't been dropped yet. Lets hope it does get dropped.

Wrong..... All the arrl needs to do is create the PSA's and distribute them to the various radio and/or television stations.
Commercial radio and television stations are REQUIRED to air a certain amount of PSA announcements per day and being a non-profit, allegedly service-based organization, that would definitely fit the bill. The only cost involved is the creation of the tapes, and the distribution thereof.

>
> As with any organization, the ARRL has limited resources. They must pick
> and choose where to apply those resources. Recruiting new hams is
something
> that can be done easily and cheaply by individual hams via word of mouth
if
> they choose.

Aparently that has not worked like it should..... If the word of mouth thing really worked, we have better numbers to have N2EY to post each month! After all, how many times can we hit up our friends and relatives??

It would be much more costly for the ARRL to try to do that
> recruiting as they would need to purchase advertising on TV, radio, and in
> the magazines and send recruiters out on lecture circuits to schools of
all
> levels. They just can't do it.

As far as sending out "recruiters," where the hell is this all-fired important field organization?? Apparently there is a decent enough amount of people that could direct people/groups to work on presentations! I worked out a wonderful Powerpoint presentation to take to the schools and tried and tried to get at least ONE person to assist me in going to the 30-40 schools just in my county alone! Not one person would help. I don't have a ton of stuff along the lines of equipment to "impress upon" some of these students so I wanted to enlist the help of others. My goal was to attract ONE person from each school (not a huge effort) each year with this plan. What really boiled my ass in all of this, was that to get information regarding the ARRL (their brochures) was going to cost me a bunch of cash. What the hell do these people pay dues for? Apparently the ARRL does not have to justify where the money goes, although they allege to spend it in the defense of amateur radio. I have asked in the past (as a possible condition of choosing to be a member or not) as to where in DC the money goes, and so far, still have not heard anything. Still have yet to see proof that the ARRL is nothing more than an expensive subscription to a magazine. (I do however think QST is a decent magazine, not the best, but pretty good.)

In addition to my other response to this particular message is, "A good defense is a good offense." This can be read into as if something is promoted more in a positive light, to educate the public, then less effort is needed to defend it.

Gee... I have more than just the "HT" as you elude to and still don't
believe in the value of the membership at the rates it currently is now.
Other than a really expensive magazine subscription, these "bennies" as you
elude to have yet to be proven.

>Some Profs that teach rf
>> courses that I took do not have amateur radio licenses.

>Most people who do "x" for a living generally do not do it for a
>past time either, Vippy. So what?

Some EE got interested from building kits as a hobby and then decided to get an EE degree. Most EEs like to build circuits for fun. They enjoy that.

Many Profs or working EEs belong to the IEEE section of their field. For example If they are in the rf field, they would be a member of the microwave techniques society.

In other words, you would be a part of the organizations and associations related to your field. If you are a professor or a person working in the rf field, it seems logical and likely you would get an amateur radio license.

I know a few Profs that teach rf courses. An antenna theory Prof has also worked in industry doing rf antenna work. This Prof does NOT have an amateur radio license. Also, another Prof that teaches microwave circuits do not have an amateur radio license.

That points to the lack of relavance of amateur radio to people in the rf specialization.

>> The ARRL should make more efforts in this area. This would increase the
>number
>> of people in the hobby. Also, there is a strong connection between EE and
>> amateur radio that is not being realized.
>
> How? Hit them over the head with a mallet then drag them off to
>the shack?

One idea is to expand the ARRL courses available now (such as antenna modelling). More publicity on these courses as useful to industry would help as well. It would show that people that took these courses have certain skills that could be useful in industry.

Sleep.

Bert:

Well said, OM! Unfortunately, it was wasted on Carl. Carl is one of those
murderously resentful NCTA's who would much rather waste all his time
whining about being tested for a useful communications skill than doing what it
takes to learn it. He is truly to be pitied, for he has wasted many years that
could have been spent happily pursuing the hobby of ham radio. The true
irony is that in spite of his professional-grade technical knowledge, he will
never be as good a radio amateur as you are!

>negative garbage (none of us did), and this activity certainly would be far
>better off without it.

Dwight:

Quite the contrary, they most certainly did "ask for [my] negative 'garbage'." When the NCTA made their case to reduce and ultimately eliminate code testing, they asked for, and received, an ARS where the old and new members are stratified into distinct classes based on their demonstrated levels of technical knowledge and operational proficiency in basic communications skills. The Pre-Restructuring hams have earned their operating privileges under a quantifiably more comprehensive and challenge set of licensing requirements. The Post-Restructuring/WRC-03 will receive identical operational privileges under a licensing system which has been significantly diminished in requirements for technical knowledge, and totally devoid of the requirement to demonstrate even the most basic knowledge of the Morse code - the most basic of all radio communications skills.

The newcomer "hams" will, from now on, have to deal with the fact that they are here on a pass. I'm not suggesting that they be deliberately treated with antagonism; however they will have to be VERY careful not to make any implications of total equality with their Pre-Restructuring superiors. The only "equality" they possess is that granted by a government agency that could simply care less, as opposed to that granted by their superior "peers" in the ARS itself. The newcomers

are here on a pass, and will have a lot to prove in order to be granted acceptance. To date, they have not even scratched the surface.

Hey Daniel.

I can tell you what I did:

I picked up a IC-745 at a Hamfest. I got lucky and got it for $250.00. Depending on how patient you are for a deal, you can pick up something like this also. The brand may vary of course, although I like the size of the 745 and the gaggle of buttons and adjustments on it YMMV.

Next, I suggest putting up a dipole, with as much wire as you can get in the air. Feed it with twin lead line. My dipole cost me perhaps 20 dollars - with lots of wire left over. I think the twinlead price was 15 dollars.

Pick up or even make a tuner MFJ makes some pretty inexpensive ones. They aren't top quality ones, but they work well enough. I got a 949e. IIRC the price was 129-149 dollars or somesuch.

This way you will have an rig and antenna setup that will cover the whole HF band. You can even use it on 160 - just don't expect too much there.

hope this helps! lett me know if you want any details.

I think that when it's all said and done it's the NTIA which might
come up as our best friend in this and perhaps other battles in the
future when it comes to commercial interests trashing the HF spectrum.
It's basically a game of pitting one gummint agency against another.
Absolutely goofy.

> Even after all this and if it fails to knock some sense into the FCC then we

Have you forgotten 8/11? We haven't.
The Yanks made an unprovoked attack on the sovereign state
of Iraq, flying airborne projectiles into buildings, burning them up
and bringing them crashing down around the unfortunate human
beings trapped inside.

Perhaps we in Brit should invade Yankland in order to displace
the murderous hypocrites who are at the head of the state?

I don't have any strong preference about the Code / No Code issue, but I have a well developed opinion about the group of hams who have endlessly repeated the same tired flamewar crapola for years on this newsgroup, over the Code / No Code issue.

Less than a dozen "hams" have used this issue as an excuse to turn this newsgroup into a running flame war that has gone on for years, much to the detriment of the hobby. People look at this newsgroup to see what hams are like - and what they see would reflect poorly on any hobby.

Charles Brabham, N5PVL

Historically Charles, this newsgroup was formed specifically to take
the code/nocode debate out of rec.radio.amateur.misc. That was
about 8-10 years ago.

Cheers,

The ONLY thing that counts is the answer to the question: What is the rational
for retaining any code test now that the ITU treaty has eliminated the requirement from the treaty?

The FCC answered that in their R&O for 98-143. The FCC indicated none of the arguments, comments or suggested reasons put forth by pro-code test advocates were of sufficient rational or justification. to keep any testing of morse.

Just where has that been shown and by whom? The FCC certainly hasn't been convinced of that.

> Why is a Tech considered qualified to use any authorized mode/freq above 30 MHz
> but unqualified to use all but CW and SSB on a few narrow slices of HF?

You are now arguing privileges, not code testing. Others have already suggested
a need for a different set of licenses and privileges. Jim, you and I have long agreed
that privileges in many cases don't map well against the testing for a particular license
class.

.....

ARRL.

Again, that has nothing to do with code testing and everything to
do with license class and privileges being revisted.

Sorry Charles, but that is pretty much the purpose of this newsgroup.
This group is not representative of hams in general, it is a pit for
those of us with the inclination towards argument to play in.

That beats having us out with the general population, no?

Well...You KNOW who I nominate:

For his pages long recitings of his CV...

For his frequent retelling of how he "worked DX" in a 1950's-era
Army radio station...

For his frequent demeaning of not only individual Amateurs, but
of the Amateur Service as a whole...

For his frequent attempts to associate himself with Soldiers who
died in combat for the purpose of improving his own "reputation"...

For countless lies, mistruths (especially that one about "get my
Extra Lite out of the box...) and use of profanity and insults...

The envelope pleeeeeeease! (drom roll ensuses....)

Leonard H. "Lennie the Liar" Anderson!

Respectfully submitted,

Steve, K4YZ

And they are certainly welcome to do exactly that, with or
without an Amatuer Radio license.

> Many Profs or working EEs belong to the IEEE section of their field. For
> example If they are in the rf field, they would be a member of the microwave
> techniques society.

Those "societies" are professional organization, Vippy. Hardly
relevent to the Amateur Radio service.

> In other words, you would be a part of the organizations and associations
> related to your field. If you are a professor or a person working in the rf
> field, it seems logical and likely you would get an amateur radio license.

Which STILL does not, in any way, shape of form, make any sense
of your assertion that EE's are "turned away" from Amatuer Radio. I
know of at least 15 people who are EE's (two holding doctorates) who
are Amateurs.

> I know a few Profs that teach rf courses. An antenna theory Prof has also
> worked in industry doing rf antenna work. This Prof does NOT have an amateur
> radio license. Also, another Prof that teaches microwave circuits do not have
> an amateur radio license.

And your "Prof" is not in this forum or insisting that he be
granted an Amateur license based solely upon his status as an
instructor, either...

You STILL have not answered the question, Vippy...SO WHAT...?!?!?

> That points to the lack of relavance of amateur radio to people in the rf
> specialization.

No more than my lack of membership in the NRA "proves" that I am
not interested in firearms. I can still hit a target in the black
from 800 meters and am not a member of the NRA..So what?

> >> The ARRL should make more efforts in this area. This would increase the

> that could be useful in industry.

These courses aer well distributed and made available to anyone
who cares to use them.

They are, however, written for NON-TECHNICALLY educated folks who
want to LEARN the basics...NOT for professional engineers.

> Sleep.

Please do. Maybe you'll wake up a bit more alert and responsible
when you do.

Larry, you're one of the most pampas, bigoted, individuals I've ever talked to. I've honestly met Klux Klux Klan members with less bigoted views. How do you live with yourself? How can you post what you write and still have any self-respect afterward?

Let me make something very clear - you don't have the right, or moral high ground, to assign or not assign equality to others. You're a two-bit punk trying to make yourself feel important by pointing to your petty code skill. In this world today, that skill is so trivial as to be almost laughable (and you know that is true). For you to hold it up like a badge of honor is laughable.

I'm one of those newcomers you keep talking about - a newcomer damn tired of your hateful comments towards those like me in this newsgroup. If you want to play this game, then you, Larry, are my inferior, as a human being and as a ham operator. In fact, you're inferior to just about anyone with more civilized views, which probably includes just about everyone else.

You keep yelling about how superior you are. Each time you do, you instead show how inferior you are, as a person and as a member of this ham radio community.

If I were not aware of how harmful bigoted people who practice discrimination can be in a community, I would almost pity your desperate need to feel important. As it is, I'm simply ashamed to be associated with you, even if that association is nothing more than a mutual interest.

And that is all I have to say to you, Larry. If you want to talk further, do so with someone who is interested in what you have to say.

1604. ARRL FUD about BPL

Newsgroup: rec.radio.amateur.policy
Date: 2003-08-19 13:04:56 UTC
From: jnye41@pavillage.netno.spam
Message-ID: <98434152.65867878@pavillage.net>
Source record: 75019
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc

The claim that BPL will seriously and negatively impact amateur radio is simply fear, uncertainty, and doubt (FUD) spread by the ARRL. That organization needs to justify its existence, and the BPL issue is a convenient way for it to show its activism. The ARRL has apparently followed the path of other self-justifying organizations such as NOW and the NAACP.

Unfortunately, the technically unsophisticated do not recognize the difference between coherent and non-coherent noise, and this makes it easy for the ARRL to spread its FUD. But the fact is that, if BPL signals are heard at all, they are coherent (have a predictable phase and amplitude) and therefore can be completely removed at the receiver. This can be done in many ways, most of which amount to nulling the BPL signals by introducing an identical signal which is 180 degrees out of phase with the original. As a matter of fact, most current HF transceivers have what they call a "noise reduction" option already built into them which uses the nulling method to accomplish its goal. Therefore, many amateurs and SWLers already have the needed equipment to deal with any BPL "interference." The ARRL reports have conveniently omitted any mention of the coherency issue, and their measurements are therefore flawed, because they don't reflect real world situations.

So take the ARRL claims with a large grain of salt, and don't succumb to the FUD they are spreading. Instead, do some reading on your own by going to non-ARRL web pages such as http://www.uplc.utc.org, and http://www.wave-report.com/tutorials/bpl.htm before accepting the ARRL claims at face value.

Ten years ago, I'd have agreed that nothing on Usenet should
have been confused with "The General Population".

Since about 1995 though, I'm not sure but what Usenet isn't just
exactly The General Population. Or perhaps just close enough
for Government Work.

There are certainly *millions* of people who have read a few
articles in the rec.radio.amateur.* groups in the last 2 or 3
years. And *millions* of people (including most hams that
looked) quickly went on to something not so clearly devoid of
intelligent life. They took with them a very poor image of
Amateur Radio.

now, just where do you propose getting this out of phase signal? true,
there are devices out there now that can do this, but they are fussy and
must be constantly adjusted as you change frequency or switch antennas. and
they also have problems with overloading and distortion.

> current HF transceivers have what they call a "noise reduction" option
> already built into them which uses the nulling method to accomplish
> its goal. Therefore, many amateurs and SWLers already have the needed

sorry, not with this type of signal. the common noise reduction processors
in most radios rely on the noise signal to be broadbanded, bpl is a myriad
of short narrow band bursts. the common noise reduction filter would not
only not work on these, but may be fooled into blanking what it thinks is
noise but really isn't in the rx passband, thereby causing more distortion
or false noise.

the other option, the dsp noise filter does not remove the undesired signal
from the receiver input, thus reducing sensitivity.

You clearly haven't become acquainted with the mathematical definition
of "coherent," which doesn't demaind a constant signal at all. What
it DOES demand is either a sharply peaked or a periodic
autocorrelation function -- properties which enable engineers to come
up with predictive filters.

> > receiver. This can be done in many ways, most of which amount to

> sorry, not with this type of signal. the common noise reduction processors

Sorry, but that's not right. The Icom 746PRO for example, has two
noise reduction functions, one of which samples slightly out-of-band
signals to come up with a time-varying estimate of the values to be

subtracted from the in-band signals. There is no need for the signal to be constant with respect to time. The second noise reduction function is directed at impulse noise and is a traditional noise blanker.

In any case, you are missing the main point of the original post, and that was that the ARRL FUD conveniently ignores the coherent nature of BPL leakage signals -- a property which makes them far less formidable than the ARRL articles would lead you to believe.

Hoo, here we go.

> Unfortunately, the technically unsophisticated do not recognize the
> difference between coherent and non-coherent noise, and this makes it
> easy for the ARRL to spread its FUD. But the fact is that, if BPL
> signals are heard at all, they are coherent (have a predictable phase

Lessee, when we have a lot of people using this, it is going to be a
coherent signal? That video of Ed Hare's certainly didn't sound like
coherent noise to me.

This can be done in many ways, most of which amount to
> nulling the BPL signals by introducing an identical signal which is
> 180 degrees out of phase with the original. As a matter of fact, most
> current HF transceivers have what they call a "noise reduction" option
> already built into them which uses the nulling method to accomplish

And it makes mush out of the recieved signal. If there is an S9 signal,
will I be able to pick a weak signal out of that?

Therefore, many amateurs and SWLers already have the needed
> equipment to deal with any BPL "interference."

"many"? That's nice. That means "many" do not have the needed
equipment. And there's still that nasty little byproduct of any
filtering scheme

> The ARRL reports have
> conveniently omitted any mention of the coherency issue, and their
> measurements are therefore flawed, because they don't reflect real
> world situations.

Seems like Ed Hare's little video showed some real world situations. S9
noise and lots of it seems like a problem to me.

> So take the ARRL claims with a large grain of salt, and don't succumb
> to the FUD they are spreading. Instead, do some reading on your own

And for a mere 900 dollars they will tell me how wonderful a thing it
is. Why don't you get a copy and share it with us?

> and http://www.wave-report.com/tutorials/bpl.htm

Hey, *there's* a technical report. I didn't know that Modems used
Silicon chips!

> before accepting the ARRL
> claims at face value.

Lessee, you just told us we have to accept these high level noise
pulses, with NR methods which nuke most of the (wanted) recieved
signals, disregarded *real* real world proof, and given us some feel
good links of no value.

It IS a good idea to take some suggestions with a grain of salt!

i think you are missing the main point. any in band signal that is not desired is noise. if you have to do processing to get rid of it you are going to lose some of the desired signal in the process... i'm sorry, but that is a fact of life, mathematics, and electronics. if you want to ignore facts and just start making attacks against an organization that is at least trying to prevent many of us from having to deal with an avoidable noise source then it is clear that you don't care about ham radio, your agenda is simply anti-arrl.

Yes the Haarp is very interesting, back in 1998 they tested the transmitters close to the 40 and 80
meter bands at about 3am est one evening talk about a BIG signal 20 over here on the east coast.

I did manage to get a neat QSL card for copying the message they sent during the test of the
equipment.

Tax dollars hard at work? In the 80's this was called ''Star Wars''

>
> The ONLY thing that counts

Hold on a sec, Bill.

We've been told that:

- we have to get rid of the code test to increase growth in the ARS
- (most) young people aren't interested in learning the code
- The future is newcomers and young hams
- The current 5 wpm test is an unreasonable burden on the VECs and new hams but written tests aren't

and the big one:

"the demographic is heavily tilted towards the no code test side"

Now, do these things matter or not?

> is the answer to the question: What is the
> rational
> for retaining any code test now that the ITU treaty has eliminated the
> requirement from the treaty?

I think you meant "rationale"

And here it is:

1) Morse code is widely used in the ARS, particularly HF/MF amateur radio.
2) Knowledge of morse code can only be measured by a practical skill test.
3) Morse code offers unique advantages to the radio amateur, but these advantages are only available if Morse code skills are learned.
4) All of the above support the Basis and Purposes of the ARS.

Does that constitute an irrefutable proof? Of course not. Neither does the 20 pages of the NCI petition.
>
> The FCC answered that in their R&O for 98-143. The FCC indicated

> keep any testing of morse.

Sure.

And this is the same FCC that thinks BPL is a good idea. Take a look at the 120 page ARRL report and the videos, then tell me what kind of "expert agency" should give such a system the time of day. Note that the BPL'rs want the Part 15 levels RAISED!

This is also the same FCC that wanted to allow media giants to become practical monopolies so that radio and TV programming become even more homogenized.

This is the FCC that "solved" the freebander linear problem by
restricting the manufacture and sale of HF amplifiers, which ties the
hands of legitimate ARS manufacturers but hasn't kept one amp out of
any illegal's hands.

"Expert agency", they're called, right?
>
> > >who could get on HF were it not for a stupid Morse

> > be
> > necessary for safe and legal operation of an amateur station.
>
> Just where has that been shown and by whom?

It's self evident. Common sense.

FCC considers a Tech to be competent to
design/build/repair/align/maintain and most of all OPERATE an amateur
transmitter on any authorized frequency above 30MHz, using any
authorized mode, at full legal power.

But it requires a General license for the FCC to consider someone to
be competent to design/build/repair/align/maintain and most of all
OPERATE an amateur transmitter on most authorizeds frequency below
30MHz, using any authorized mode, at full legal power. In fact,
Techs-with-HF are only authorized to use two modes and small slices of
four bands.

Why is a Tech considered competent to run a 1500 W transmitter on 51
MHz but not 29 MHz? Why is a Tech considered competent to use CW, SSB,
AM, FM, FSK, PSK, and a host of other modes above 30 MHz but only CW
and SSB below 30 MHz?
What is in the General written (besides a few regs) that is so
essential that it MUST be tested?

Now consider the Extra vs. General written. There's no difference
between what a General can do and what an Extra can do on the air
except that the Extra has a little more spectrum to do it in. Why is a

General considered competent to run a 1500 W transmitter on 3.530 MHz
but not 3.520 MHz?

> The FCC certainly hasn't been convinced of that.

See above about convincing FCC.
>
> > Why is a Tech considered qualified to use any authorized mode/freq above
> > 30 MHz
> > but unqualified to use all but CW and SSB on a few narrow slices of HF?

I am arguing that focusing on the code test as a "stupid" requirement
opens up the same can of worms on the writtens.

> Others have already suggested
> a need for a different set of licenses and privileges.

Yup - and a lot of those changes are not for the better. But how can
they be defended against?

> Jim, you and I have
> long agreed

It has to do with the patchwork changes made to the license structure.
Our basic system dates from 1951.

> radio.

So??? That use is purely a matter of choice ... those who chose to use Morse should have the freedom of choice to learn it and to so ... however, at the same time, those who are not interested in using Morse should not be forced to learn it in order to gain HF privileges ...

> 2) Knowledge of morse code can only be measured by a practical skill
> test.

Excuse me ... I think you mean "proficiency in " not "knowledge of" ... those are important distinctions ... I have no problem with test questions on the theory of OOK Morse ("What's the necessary bw for x wpm?" "What are "key-clicks" and how can they be prevented?" etc.) But a proficiency requirement as a condition of access to HF is totally out of line.

> 3) Morse code offers unique advantages to the radio amateur, but these
> advantages are only available if Morse code skills are learned.

Other modes also offer "unique advantages" ... those advantages are in the eye of the beholder and largely subjective ... those who believe that it is advantageous to learn/use Morse will do so ... those who don't should not be forced.

> 4) All of the above support the Basis and Purposes of the ARS.

The FCC disagrees ...

[snipped the remainder of debate on privs vs. license class as irrelevant to the Morse question]

All I know is I have heard it with my own ears, and seen it with my own eyes
and it will wreck HF for me.

I don't care how much theory or alleged science you want to try to wrap
around the BPL issue, it won't solve my personal loss if it becomes the ISP
of the future.

So I will keep sending my money to the ARRL and I will encourage them to
work towards keeping my hobby fun.

Those are inaccurate distinctions, Carl. Element 1 is IN NO WAY a test of one's Morse code "proficiency." The 5-wpm test is just barely sufficient to test the applicant's "knowledge of" the 43 required characters. IOW, did s/he memorize the required character set. Are you intentionally trying to spread this mistruth to rationalize NCI's "goal" or do you really consider a newbie whose Element 1 CSCE hasn't even dried yet Morse "proficient?" Why don't you just tap into the knowledge base, Carl? Ask the OT's and learn from them That's what they're there for.

Bert ... I *am* an OT ... member of QCWA ... learned the code ... didn't
particularly enjoy it ... have no use for it any more.

And, yes, the Element 1 test IS a measure of proficiency ... at 5 wpm ...
if you can't do 5 wpm you don't pass ... ergo, it's a measure of proficiency
(and that's how the FCC characterizes it as well ...)

> > ... I have no problem with test questions

Yes, we do ... 5 wpm ... for the moment, at least.

OK, I'll settle for "coerced" ... as in "If you don't jump through this
irrelevant
hoop, you can't have HF privileges." That is coercion.

> > > 4) All of the above support the Basis and Purposes of the ARS.

It's not a "big brother knows best" view ... it's a "What's rational and
serves a
regulatory purpose" view.

It's also interesting that Mr. Nye points us to the websites of folks
who are advocating BPL ...

I wonder, is Mr. Nye a consultant to the utilities or BPL manufacturers?

I live just outside of Emmaus, PA, (test site #3 in Ed Hare's video).
While I am currently far enough away from the limited deployment
that I cannot detect it here at my QTH, I have gone down to the
area with my FT-817 and can verify that the noise is HORRIBLE.

I shudder to think what havoc large-scale deployments would bring.

Despite Mr. Nye's allegations of "FUD" ... the ARRL is right on
this one.

It's all opinion and marketing. Marketing is what brings us milkshakes
that are so thick you can't get them through a straw. Marketing is what
gives us Ketchup that you can't get out of the bottle. but then "thicker
and richer" sells don't it. Marketing is what causes convenience stores

to sell "Ultra Mega" soda's with 144 ounces of soda and the resulting calories, and fast food restaraunts to prepare us "Super doopersize" 2000 calorie meals when all we need is 300 calories.

The relation is that the marketing words (or contramarketing words) thrown around sound like they might be a good thing. Here the NCTA's have the edge too. Look at the words used and it s pretty clear, "Outdated" "Future" all the marketing words are there.

And as anyone familiar with marketing knows, It does not make a damn bit of difference if you are right or not.

The truth does *not matter* in this case, and besides, what exactly is the truth? I guess it is who you hang out with.

PCTA's haven't done enough proper marketing of their product IMO.

One of the reasons I heard was that the VHF bands are more localized,
and therefore the technician, if he or she did commit rules violations,
would at least confine it to frequencies that were not globe spanning.

> Now consider the Extra vs. General written. There's no difference
> between what a General can do and what an Extra can do on the air

Bingo! I've been saying that for while now.

It's a fact that you do not need to be tested at all to operate high
power levels on HF. CB'ers do it all the time.

Let's try a little marketing talk ....

"The written tests are an obsolete throwback to an earlier time when
Amateurs HAD to know how to put a station together using a lot of their
own handicraft. Now that HF rigs are no more complicated to put on the
air than hooking up a VCR to a television, it is pointless to insist on
the hazing requirement of forcing the prospective amateur to spend
countless hours learning things that he or she may have no use for."

There is nothing wrong with an Amateur having knowledge of the things
covered in the present and obsolete written examinations, but why should
a person who has no intention of ever doing anything but using his ready
made rig to talk to other hams be forced to learn these things that he
or she will never use.

Those who wish to know things like Ohms law, and various arcane laws are encouraged to do so, but to require all hams to know such things is a form of hazing, or is this a case of "I had to learn the band edges, so by gaw, everyone has to"!

The written examinations are keeping people out of the ARS who refuse to jump through these arbitray hoops set up by those who want to see the ARS as some kind of elite service. Those elite people are destroying the ARS by discouraging participation by all Americans.

Sound about right Jim? Reasonable arguments I think. Wrong, but reasonable.

Well, I am greener than green when it comes to these things, as I have yet to get my technician license, but I expect to get my general right after, if not immediately after taking the technician test. I am studying morse code, and expect that only a week left of study will leave me more than able to pass the test.

As far as people being upset with the deterioration of ham, I might agree to a certain degree. Once in a while, a little levity is okay, but people burping, farting, and playing weird sound effects doesn't constitute (as far as I'm concerned) good use of the ham bands... I question its legality, as well. I hear people trying to imitate other hams (though they don't go so far as blathering out other people's callsigns)

Again, I'm profoundly green, and at this point of study, would barely pass my tech exam. I want to ace it. I expect to ace it.

Hopefully it won't be too long.

No, it's a real issue. Have you seen the video? Have you conducted
tests on the BPL demo areas?

> That

> world situations.

Have you actually done this? Where is your 120 page report and demo
video?

Are the BPL folks going to buy me a new transceiver if my existing one
doesn't have these alleged noise-cancelling features?

Let's get down to basics on this.

What you're saying is:

1) BPL does radiate lots of noise
2) Rather than the unlicensed BPL folks not radiating the noise, it should be up to the licensed users to filter out the noise using techniques you have not demonstrated.
3) If an amateur does not have the technology to filter out the noise, he/she is out of luck.

Let's do an analogy, shall we?

Imagine the RF spectrum as a river that is used by many different people for many different purposes - transportation, recreation, fishing, irrigation, energy generation, drinking water, etc. All are licensed and have their uses balanced against each other. Nobody is allowed to just dump trash in the river.

Along comes a group that wants to use an existing bridge over the river for transport. But the vehicles they want to use on the bridge leak and spill their contents, some of which falls into the river. They claim that:

- the spillage is harmless
- proof of harm is up to the other users
- anybody who doesn't like the spillage should simply equip themselves with filters to strain it out, rather than requiring the transport company to seal up their vehicles and not spill in the first place.

Here's another: Perhaps we should remove all air pollution devices, and simply have everyone go around wearing gas masks.
>
> So take the ARRL claims with a large grain of salt, and don't succumb
> to the FUD they are spreading.

What about the inaccuracies YOU are spreading?

> Instead, do some reading on your own
> by going to non-ARRL web pages such as http://www.uplc.utc.org, and

> claims at face value.

I did. I saw nothing about "coherent noise". I did see a lot of boosterism for a polluting technology.

DSL and cable modems don't pollute the RF spectrum. Why should BPL be allowed to do so?

Dan keep in mind the ham population of the USA is over 680,000 licensees.
So several dozen renegades on the bands can reek havoc.
Was that way since way back when, not just today.
The greater % of hams are very well behaved.

As far as new license requirements -- when you get the ticket -- you are
every bit an Amateur Radio Operator as any one else.
Don't let anyone tell you otherwise. Just some old timers are 40 years
behind times.

Welcome to Ham Radio and ignore the grizzly old timers who had to draw a
Colpitts Oscillator to get their license.

That from an extra class licensee - for 25 Years.

Actually Jim, you probably didn't spend enough time reading what
little I wrote. It doesn't say a *thing* about Bill. You might
notice that he doesn't flood this or any newsgroup with innane
posts on a daily basis, and in fact I agree with almost
everything I've seen him post here.

I will grant though, that it _was_ about you.

>of conducting civil debate "does not advertise hams well". I mention

So you have exceptions that prove the rule. The point was that
the rule *is* valid.

Which is all the more support for that point that it does not
advertise hams well.

I'm an individual amateur and a member of the ARS as a whole. I don't
"feel" demeaned. There is some truth in Len's observation of the ARS.
Accept it.

> For his frequent attempts to associate himself with Soldiers who
> died in combat for the purpose of improving his own "reputation"...

If you served, you are associated with soldiers who died in combat.
That's just the way it is, and no amaount of running away from it will
disassociate you from them. Yet there are those who never served and
claim "military experience." That is disgusting.

>
> Dee D. Flint, N8UZE

Dee, I wished I were able to keep all of my QST's, but I tend to move
a lot and can't keep hauling everything I'd like.

Anyway, about 10 years ago, QST featured a ham in Texas that kept
records of his 10M activity. He was able to make contacts beyond
ground wave when most everyone else thought 10M prop was closed. It
was a good story and worth looking up if you have access to back
issues or the CD-ROMS.

But power does help, always has, always will. And a few watts may
work, but not necessarily reliably.

There is quite a network of 10M beacons, and you can often hear the
beacons when you hear no other traffic higher up in the band. 10M
just isn't glamorous, some OT hams calling it the "kiddie band." And
you risk running in to the Ten-Tenners (I am told). ;^)

I dunno, Mike. Were you around during the last restructuring? The NPRM was the most amateurish piece of literature I've ever seen from a government agency. The R/O was the second most. Left more questions than answers. Of course, there was a lot of interference from the ARRL in the process, so...

Your detailed firsthand comments to FCC are much-needed in the fight, Carl.
Theory is great but having lots of hams say "I was there and it raised the
noise floor XX db 160-6" is even better.

And IIRC the demos are meeting Part 15, and the BPL folks want to RAISE the
allowable levels!!

Did DSL or cable get that sort of gimmee? I don't think so!! If the utilities
want to get into the broadband game, let 'em play by the same rules as
everybody else.
>
>I shudder to think what havoc large-scale deployments would bring.

Would make our codetest debates kinda moot, huh? And don't forget that access
BPL goes up to 80 MHz on fundamentals. Harmonics, anyone?
>
>Despite Mr. Nye's allegations of "FUD" ... the ARRL is right on
>this one.

AGREED!

I say the stuff about "coherent noise" is simply a smokescreen to divert away
from the real issue. Which is simply that BPL puts out a lot of noise that will
cause harmful interference to all licensed users of the affected spectrum. And
this interference is totally avoidable by using better technology, like "PBL".

Do you agree, Carl?

73 de Jim, N2EY

btw, how far from the test site do you have to get before the BPL noise disappears?

Jim,

Having worked in EMC labs (electromagnetic compatibility), I've heard the signals generated by some equipment. What you fail to understand is that these signals are being modulated at very high rates of speed. Inside of your computer exist a number of oscillators. You assume that only those frequencies and their harmonics would be broadcast. Do yourself a favor and put an HF radio or HF scanner next to your computer while it is on. Turn off the monitor so you won't blame the monitor. Guess what? A ton of garbage. BPL will be worse since it will be carrying more than one signal over the power lines. These will likely carry information at a 1.5 megabaud rate. Check out the ARRL website and view (and listen to) the 26 MB video they have available showing the radio, S-meter, and the car driving around. It is a veritable cacophony of noise all over HF.

The fact is that folks such as yourself who are not particularly technically inclined make statements that other non technically inclined individuals will believe without actually studying the matter. I can assure you that your position is totally in error.

What you are proposing is to shift the cost of correcting the
interference caused by this technology from those who will profit from
it to the victims of the interference.
Do you plan to invest your BPL profits into stock in the companys
that will manufacture the new radio equipment that your technology
will force us all to buy?

Hams ought to know better. After all, we are used to being ambassadors for the hobby while on the air... Strictly speaking, this would lead one to expect hams to be one of the very best-behaved groups on usenet as well. The basic, guiding principal is the same: Our behavior when on the air (or on the Internet) reflects directly upon the hobby.

These days it is easy to come up with a specialized mailing list, and that's where this newsgroup's type of discussion belongs, in a semi-private venue. Usenet is too public for airing out our dirty underwear. This repetitious code / no code stuff should be moved out of the public eye. The discussion has migrated before - and should do so again, for the same reason. - To cut down on the noise level, and put a better face on the hobby at a critical time.

The fact that you can point out bad behavior done in the past does nothing to justify further bad behavior today or tomorrow. Instead, it points out the need to do better, to set our sights on where we really want to be.

It's really HARD to market a product that few want ... that's why the PCTA's feel the need for a government-sponsored support system.

> NCI pettition is all opinion.

No ... the NCI petition is loaded with the facts about how any legitimate need for a government-mandated Morse test evaporated years ago, how the FCC has determined that it does not comport with the purpose of the ARS, how the test serves no regulatory purpose, how it doesn't "make for a better, more well-behaved, more technically competent operator, etc., etc.

The petition is chock-full of facts ...

[snipped the rest because I refuse to get drawn into unrelated debates about privs vs. license class, etc. that have nothing to do with the Morse test issue ...]

The noise reduction options also distort the signal that you are trying to
hear. It makes it unpleasant to listen to. Hams and SWLs will object if
they have to use it all them time.

That is great Charles, you are using your free speech right to tell others
that they should not debate public issues in public.

I predict that 47 CFR 97.503(a) will last long then this thread.

Please, this newsgroup is reserved for the endless code/nocode debate.
The censorship debate is on another newsgroup.

> issues or the CD-ROMS.
>

I've worked stations on 10 when the band was "closed" as there are other
propagation modes besides the normal ionospheric refraction that occurs
during times of high solar flux.

> But power does help, always has, always will. And a few watts may
> work, but not necessarily reliably.
>

Up to a point power helps. If there is no propagation mode currently
between you and the other station, power won't help no matter how much you
use. However if there is some propagation, then additional power can indeed
let you maintain clear communications under marginal conditions. If the

other station is already receiving you at say S9 and there is no background static, more power will not help. You get a higher meter reading but there is no enhancement of the communication.

> There is quite a network of 10M beacons, and you can often hear the
> beacons when you hear no other traffic higher up in the band. 10M
> just isn't glamorous, some OT hams calling it the "kiddie band." And
> you risk running in to the Ten-Tenners (I am told). ;^)

I scan for the beacons myself but even when they are not coming through, I still scan the band for propagation to areas that just might not have a beacon but is open due to phenomena like E skip.

Derek:

Another excuse. The "family problems" excuse -- one of the all-time
favourites.

> So why not give the newcomers a helping hand instead of slagging them off
>all the time, Just REMEMBER you was new to the hobby ONCE

Yes, I was. And I was definitely NOT "welcomed" with open arms, offered
tea and crumpet, and made to feel at home at my first few radio club
meetings. In fact, several times I was actually asked what the he** I was
doing there. However, I persisted, gained acceptance by showing my
willingness to learn and advance, and most importantly, I didn't make
excuses for my lack of progress, even though I saw lots of other hams,
usually the life-long Technicians who could never get beyond 5 WPM
code, doing precisely that. I was also able to convince a few of these
complainers that they could learn the code beyond 5 WPM, but that
took a committment to become a CW operator and not just a phone
yakker.

>> 73 de Larry, K3LT
>>
>
>Well, at least you can spell the word "intellectual." Now, could you start
>practicing it? Go ahead, challenge me. I'd like to see something
>intelligent from you for a change. When you do that, I will respond in
>kind...

Ok, Kim, that's easy. Please provide a logical, rational, and convincing argument justifying your call sign, giving proof that it is not demeaning to women, and that it cannot possibly give a negative image of amateur radio operators to the general public, including adults who are concerned about the exposure of young children, particularly young boys, to things which tend to create negative sexual stereotypes.

I hope this is "intelligent" enough for you. Quite frankly, I don't think you can handle it. Prove me wrong, if you can.

Before the

Federal Communications Commission

Washington, D.C. 20554
In the Matter of
Inquiry Regarding Carrier Current Systems,
including Broadband over Power Line Systems
)
)
)
)
)
)

ET Docket No. 03-104

COMMENTS OF THE NATIONAL TELECOMMUNICATIONS
AND INFORMATION ADMINISTRATION

The National Telecommunications and Information Administration (NTIA), an Executive Branch agency within the Department of Commerce, is the President?s principal adviser on domestic and international telecommunications policy, including policies relating to the nation?s economic and technological advancement in telecommunications.ï¿½ Accordingly, NTIA makes recommendations regarding telecommunications policies and presents Executive Branch views on telecommunications matters to the Congress, the Federal Communications Commission (Commission), and the public.ï¿½ NTIA, through the Office of Spectrum Management, is also responsible for managing the Federal Government?s use of the radio frequency spectrum.ï¿½ NTIA respectfully submits the following comments in response to the Commission?s Notice of Inquiry in the above-captioned proceeding.[1]

I.ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ NTIA SUPPORTS THE COMMISSION?S BPL INQUIRY AND ENCOURAGES THE
COMMISSION TO MOVE FORWARD EXPEDITIOUSLY.

NTIA believes that Broadband over Power Line (BPL) holds great promise as a new source of innovation and competition in the broadband marketplace.ï¿½ It has the potential to open new avenues of Internet access, to enable new and expanded services for utility companies, and to create a new platform for further advances in communications technology.ï¿½ By moving swiftly to examine BPL and to establish appropriate rules for its use, the Commission can provide this emerging industry with a solid foundation upon which to build new services and products that will benefit American consumers and businesses.ï¿½ Thus, NTIA urges the Commission to move forward expeditiously with its BPL

Inquiry.

II.ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ NOTWITHSTANDING BPL?S POTENTIAL BENEFITS, THE COMMISSION MUST ENSURE THAT OTHER COMMUNICATIONS SERVICES, ESPECIALLY FEDERAL GOVERNMENT OPERATIONS, ARE ADEQUATELY PROTECTED FROM UNACCEPTABLE INTERFERENCE.

ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½In tailoring its rules to promote BPL deployment, the Commission
must be certain to provide all communications stakeholders with adequate protections against BPL emissions that may cause unacceptable radio frequency interference.ï¿½ The federal government has extensive operations that potentially could be affected by BPL systems.ï¿½ Indeed, federal government agencies have over eighteen thousand (18,000) frequency assignments in the 1.7 - 80 MHz spectrum in which BPL systems may unintentionally radiate.2 ï¿½ï¿½These assignments accommodate many tens of thousands of receivers operating throughout the United States, in many cases in close proximity to potential sites for ?In-House? and ?Access? BPL systems.[2]ï¿½ The systems that operate in this region of the spectrum provide numerous services, such as national fire emergency communications, federal and non-federal law enforcement communications, emergency operations, search and rescue, aeronautical and maritime communications, and disaster relief communications.ï¿½ Some of the Federal Government systems utilize Automatic Link Establishment (ALE), encryption and other technologies that affect the tolerance to interfering signals.ï¿½ Consequently, NTIA has broad concerns with radiated emission limits and other measures that may be needed to protect these systems.[3]ï¿½

III.ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ NTIA IS LAUNCHING EXTENSIVE MODELING, ANALYSIS, AND ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½
MEASUREMENT EFFORTS FOR BPL AND WE ENCOURAGE THE ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½

systems.ï¿½

ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½NTIA additionally has a substantial interest in BPL authorization
procedures, especially the measurement procedures for ascertaining compliance with radiated emission limits.ï¿½ These procedures must correctly determine compliance without undermining the protective effects of the limits.ï¿½ However, the procedures should not unnecessarily restrict the emission limits or cause service providers to incur undue costs or delays in deployment.ï¿½ The measurement performed by ITS will provide guidelines for development of compliance measurement procedures that NTIA believes are a key factor in ensuring compatibility with federal government systems.ï¿½ A copy of the measurement plan is provided in Appendix A.

ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ NTIA expects to conclude its modeling, analysis, and measurement
efforts by the end of 2003.ï¿½ NTIA intends to submit its findings to the Commission, and we urge the Commission to consider those findings as it moves ahead with successive stages of the BPL proceeding.

IV.ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ CONCLUSION

ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ In summary, NTIA supports the Commission?s efforts to investigate
new technologies that could foster new communications services and bring additional options for Internet access to the American public.ï¿½ NTIA looks forward to working with the Commission and the communications and power industries in developing the appropriate regulatory framework to permit BPL to flourish while protecting federal systems from interference.

ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½

ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ ï¿½ï¿½U.S. Department of Commerce
ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ ï¿½ï¿½Room 4713
ï¿½ï¿½ ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½1401 Constitution Avenue, N.W
ï¿½ï¿½ï¿½ï¿½ ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½Washington, DC 20230
ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ ï¿½ï¿½(202) 482-1816
ï¿½ ï¿½

August 13, 2003

APPENDIX A

Summary of Measurement Plan
for Emissions Radiated by Experimental
Broadband over Power Line Systems

July 18, 2003

1.ï¿½ Introduction

ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ The Federal Communications Commission has issued a Notice of Inquiry1
that requests comments about Broadband over Power Lines (BPL).ï¿½ BPL uses power lines to provide broadband communications services, including Internet access, to homes and offices.ï¿½ The Commission seeks comments on:

1) The potential interference effects of BPL, if any, on authorized spectrum users;

2) Test results from BPL experimental sites;

3) The appropriate measurement procedure for testing emission characteristics for all types of carrier current systems; and

4) Changes that may be needed in Part 15 technical rules and the equipment approval process to foster the development of BPL and to ensure that interference is not caused to other services as a result of this technology.

The BPL Inquiry defines two types of BPL as "Access" and "In-House."ï¿½ Access BPL uses medium voltage power lines to bring broadband access to homes and offices.ï¿½ In-House BPL uses existing electric utility wiring (low voltage lines) to devices within a building.

ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ The following plan describes proposed measurements that will
quantify unknown aspects of BPL signals.ï¿½ The measurements will be conducted at several sites where systems are currently deployed for testing purposes.ï¿½ The objectives of this plan include:

1) Measure the signal power and the co-located background noise power for several locations, radials and relevant bandwidths.

2) Measure the peak, average and quasi-peak levels of the above.

3) Measure the above for both horizontal and vertical polarization in a few locations.

4) Convert the received power to field strength.

5) Measure the peak and average power levels over a day in a few locations to examine the time variability of the received power.

6) Measure the received power along one or more radials from the BPL site to determine the distance from the source to the near-field boundary.

7) Measure the peak and average power levels of BPL signal harmonics and intermodulation products at frequencies up to 1,000 MHz.

ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ The technical descriptions of BPL systems that will be examined are
based on information supplied by the system operator. ï¿½Certain technical details of the systems will likely be considered proprietary information by the system operator, and will be treated appropriately by NTIA.

ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ The measurement setup is shown in Figure 1.ï¿½ Equipment will be
calibrated before the measurements are made. ï¿½An antenna, positioned 10 meters above the ground on the Radio Spectrum Measurement System (RSMS)-4 vehicle2 and 2 meters above the ground on a tripod, will be used to measure the received power over a frequency range that extends above the frequencies of the BPL desired, conducted emissions.ï¿½ The signal from the antenna is split into two measurement systems so that simultaneous peak and average power measurements can occur.ï¿½ One of the systems will alternately measure quasi-peak levels.ï¿½ A preselector will be used on each system to prevent an overload condition from occurring and improve the sensitivity.ï¿½ Computers will be used to control the measurement systems and store the data.

Figure 1. ï¿½BPL Measurement Setup.

ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ Measurements using various bandwidths will be made to determine the
characteristics of the BPL signals and their intermodulation and harmonic products. ï¿½An ITS stepped measurement routine will be used to collect peak and average power, as a function of frequency, for 3 kHz and 10 kHz bandwidths below 30 MHz and 10 kHz and 30 kHz above 30 MHz.ï¿½ Quasi-peak measurements also will use the ITS stepped measurement routine with the bandwidth specified for compliance measurements. ï¿½The repetition interval of the BPL signal will be determined from the operator?s technical data that describes the BPL signal.ï¿½ If the data are unavailable, the interval will be determined empirically at the first measurement location.ï¿½ The peak and average power will be measured over the repetition interval.

4.ï¿½ Measurement Procedure

ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ Ensure that the antenna's main beam has an unobstructed view of the
BPL source.ï¿½ Photograph the antenna's view of the BPL source. ï¿½Transmit the same, repeatable test signals over the network for each signal measurement.ï¿½ At the first location, examine the BPL signal envelope to confirm or discover the repetition interval.ï¿½ Record the envelope over one period.ï¿½ Start the peak value measurement system.ï¿½ Start the average value measurement system to run

concurrently with the peak value system.ï¿½ Upon completion, switch to the quasi-peak system and perform a stepped measurement.ï¿½ When the measurement system finishes, turn off the BPL signal.ï¿½ Run the three measurements again.

ï¿½ Proceed to the next location and repeat the measurements in the
above paragraph.ï¿½ Generally speaking, most receiving antennas of concern in the 1.7 ? 80 MHz spectrum are vertically polarized so these polarizations will be used.ï¿½ In a few locations, average power measurements will be made using both polarizations, noting that horizontally polarized receiver antennas are also used and propagation effects may depolarize the BPL signals.

ï¿½ The above measurements produce samples of the received power.ï¿½ It is
desirable to increase the time spent recording received power in a given location to examine the time variability of the radiated level.ï¿½ The power should be sampled over an hour's time and a complementary cumulative distribution function (CCDF) calculated.ï¿½ This would yield a better peak value as well as giving an indication of how often other levels occur.ï¿½ Five hourly measurements would produce CCDF graphs to show time variability throughout the day.

ï¿½ The RSMS-4 vehicle will be driven along a road that approximates a
radial from the BPL test site.ï¿½ Signal power will be sampled approximately every wavelength along the route.ï¿½ Several routes and several frequencies will be measured.

ï¿½ Measurements will be made over two-weeks to be coordinated with the
BPL network administrators.

ï¿½ The measurement product will be a report that describes the
measurement methods and presents the graphical results.ï¿½ The first graph will show the signal envelope over one measurement period.ï¿½ The next graph will show the peak received field strength as a function of frequency.ï¿½ The abscissa will contain the BPL frequencies that are receivable by the system.ï¿½ The third graph will show the average field strength as a function of frequency.ï¿½ The fourth graph will show the quasi-peak level as a function of frequency.ï¿½ Several series of these graphs will be produced, one series for each measurement location.ï¿½ In some series, graphs showing two polarizations will be produced.

ï¿½ For a few locations, CCDF graphs will be computed showing the
probability that the signal amplitude does not exceed a threshold.ï¿½ Each graph will show the variations in signal amplitude over each hour that data was collected.

ï¿½ The last set of graphs will show the received signal power as a
function of distance away from the BPL site.ï¿½ An analysis will be performed to

identify a distance beyond which the power decreases at a rate of 1/(r2).

[1]ï¿½ Inquiry Regarding Carrier Current Systems, including Broadband over Power Line Systems, ET Docket 03-104, Notice of Inquiry, FCC 03-100 (released April 28, 2003) (?BPL Inquiry?).

2ï¿½ï¿½ As a result of non-linear elements in the electrical power distribution system, BPL systems may radiate emissions at frequencies substantially higher than the frequencies actually used intentionally within the BPL system.ï¿½ Thus, BPL emissions in spectrum other than 1.7-80 MHz may also be of concern to federal government users.

[2] ï¿½In-House and Access BPL systems are described in more detail in the BPL Inquiry.ï¿½ BPL Inquiry at ï¿½ 2.

[3] ï¿½NTIA recognizes that interference can occur directly via conducted emissions (i.e., signals carried over wires) as opposed to radiated emissions. ï¿½However, conducted emissions limits and the electromagnetic interference problems they prevent are outside of NTIA?s purview. ï¿½Consequently, NTIA will be addressing conducted emissions only in relation to radiated emissions.

[4] ï¿½BPL Inquiry at ï¿½ï¿½ 18-20.

[5] ï¿½Id. ï¿½ 21.

1ï¿½ Inquiry Regarding Carrier Current Systems, including Broadband over Power Line Systems, ET Docket 03-104, Notice of Inquiry, FCC 03-100 (released. April 28, 2003) (?BPL Inquiry?).

2ï¿½ The NTIA RSMS is a mobile, self-contained computer-controlled radio-receiving system capable of many measurement scenarios over a broad range of frequencies.

Oh yeah. Uh huh. Uh huh. Can you read the Path header of this post,
Woger? I didn't think so.

>
> > Now the window licker returns,
>
> Now, Hammy, you don't want me to post your numerous DUI records, do you?

As usual, Woger takes wild guesses at my identity. He's been trying
for three years, but has failed every time. You'd think that he would
finally learn, but that's simply beyond his capacity.

I do have to praise you, Roger, on your trip to New Delhi during 2001.
For several weeks the Indian newspapers were full of stories about
the monkey man. Good work on getting back home undetected.

See http://www.cnn.com/2001/WORLD/asiapcf/south/05/17/india.monkeyman
for a story about Woger's escapades.

/./././././././

Wogie takes shots in the dark and makes what he thinks are "educated"
guesses. To date he hasn't been right yet, which gives cause to doubt his
veracity on anything else he has claimed.
For instance, Roger claimed he was once married. To what? He claimed he has
a couple of grown kids, too. If this is so one has to wonder if his kids
live in trees or are subterranean dwellers.
It is doubtful that Rogie has EVER been involved with any walking, talking,
intelligent woman of any species much less had one agree to marry him. He
WAS adopted, after all.
Perhaps this is why he takes occasional sabbaticals to India. The monkeys
aren't too awfully choosy.....
By the way, Stagger. What ever happened to Arf! Arf! He (or she) has nil
been heard from for almost a year now.

How is it that you keep attempting to sell this idea when there is ample
evidence to the contrary?

I personally know hams who build transmitters and receivers. I know
hams who build amplifiers, power supplies, preamps, converters,
transverters, antenna tuners and test equipment. I've built most of
those things myself.

Aside from those items, I've built antennas which include, verticals,
dipoles, quads, yagis, inverted "L's" and omega-matched towers. I'm not
unique.

Why the persistence in playing the fool when the facts prove you wrong?

Among your numerous erroneous claims are:

1. Hams are all old.

2. Hams are all fat.

3. Hams are all male.

4. Hams aren't interested in anything technical.

5. Hams go on trips and spend all of their time operating radios.

6. Hams are anti-social.

Among the things we've been able to glean from admissions you've made in
follow up posts:

1. You seem to have trouble adjusting to American society.

2. You attend radio club meetings and attempt to set the agenda.
You are disappointed when other members do what they want to do and
dismiss your ideas.

3. You go on outings which have a specified purpose and are disillusioned when those participating stick to the specified purpose.

4. You don't like what and how much others eat or the frequency with which they eat.

5. It upsets you that amateur radio gatherings don't seem to be a particularly good venue for meeting eligible women.

6. Being around older people bothers you.

7. You believe that amateur radio should be a playground from electrical engineers.

8. You don't accept anyone's word that "ham radio" and "amateur radio" are one and the same.

9. You'd have us believe that someone can copy morse at 13 wpm but forget how to copy at 5 wpm.

I've been willing to give you a little slack because you obviously weren't raised in this culture. I've been willing to overlook some of the things you've written about amateur radio because you're an obvious newcomer to it. There are limits to my tolerance. You've been corrected quite a number of times on some of your mistaken beliefs but you persist in repeating those mistakes.

Dave K8MN

No thanks, you've already taken and given it away once already.

Americans Are staunch believers in Democracy, for themselves.

That's why I want to be one, like the Roman empire, it's much better
inside being a citizen, than outside and a slave.

"Bloody Romans what have they ever done for us". ;-)

That would be a poor swap, there's more life in death valley

How about a swap for Fleetwood nr Blackpool, Lancs ?
Anything over a Buck 50 would be more than acceptable,
and we'll chuck the pier in free.
You can park it next to the Queen Mary.
But transportation costs are down to you

It will continue getting closer until next week, then slowly go back to it's normal smaller size as viewed from earth. So the show will continue for more than a month from now.

I was out again with some friends tonight. It was even better than last night. The air was more steady, and the planet gave up good details, with the Ice cap plainly visible, and plenty of surface markings. It is strange, but the dark surfaces are blue against the red normal color.

I am really going to get sleep deprived over the next several weeks.....

If you and Larry are examples of what a real ham is, then I have no problem with being considered something else. And, observing your rudeness and demonstrated ignorance, I have no desire to be your equal. Finally, I don't ride on a bus - there are too many like Larry driving them and too many like you riding as passengers.

Well, that's your opinion anyhow! 8^)

But seriously, if I could offer some advice. It is okay to have an
opinion. You have your's and I have mine.

It's even okay to try to turn your opinion into the law of the land. If
enough people agree, it will happen.

But there is a mistake of hubris in believing that ones own personal
opinion is fact.

At this point, I don't think Larry can think of anything else, Kim. I've been reading his negative garbage for four or five years now. The same subjects (code, licensing requirements, and newer hams) are almost always the focus of his messages and those messages are almost always filled with delusions about his own self-importance and insults towards others.

I don't know if Larry thinks he's being funny or if he really believes the hatred he spews. Whatever the case, I'm getting real darn tired of it. If he continues with ridicule that includes me as a target, I'm not going to continue to sit back and say nothing.

If the majority of respondents in this newsgroup side with him, making him the de facto spokesperson for ham radio and the higher license classes, then perhaps this isn't an activity I wish to continue participating in.

Were you publicly ridiculed, Larry? Did people sit around those club meetings you went to talking about how superior they were and how inferior your were? I strongly suspect anything they said to you or about you can't possibly compare to the negative garbage you've posted in this newsgroup about today's newcomers.

At this point, newcomers aren't asking to be welcomed with open arms - that appears to be far too much to ask in this community. Instead, we're simply asking you to tone down the hateful rhetoric.

C'mon Charles,

Don't you realize, some people just are not happy unless they are bitching about someone. And the others are the kind that like to watch others bitch. Why do you think talk shows like Jerry Springer etc. do so well? This is just another version in a different form. Do you honestly think that an actual intelligent debate over a topic could actually occur here?

Did you notice anything noteworthy about this thread, Kim? It mainly consists of those like Larry (the pro-code troublemakers) maliciously nominating people without code skills. These guys, specifically Larry, claim the no-code crowd is always the ones attacking them, while they're simply defending themselves with the rhetoric they spew. Instead, what is seen here is an example of the real truth - Larry and his ilk targeting specific people in the hopes of dragging them into an argument and the no-code crowd not nominating anyone in the hopes of avoiding an argument. It does say a lot about the character of the two groups, doesn't it?

Oh goodness, Dwight! That's a lot said right there. BUT, it's *in spite
of* the likes of Larry that I like being in the hobby/service of ham radio.
And, believe me, Larry really believes what he is saying. He's a desperate,

lonely, little man--and his delusions are all he's got.

Oh, and by the way. Look real close at who is actually communicating with him on an intellectual level. Nada. Zip. There are people in this newsgroup who get communicated with, and there are people in this newsgroup who get communicated to. Larry is in the latter. For all the times I've pissed people off, across the board, there are still times when threads have been maintained for a good length of time that involved intellectual debate. Same for you. Same for any of us "antagonizers" as we are affectionately called.

But, not for Larry, not for a couple of others. Larry isn't "spewing" anything that sticks; his kind of logic and reasoning are quite in the minority in ham radio.

Sorry Larry, you must have gotten your wires crossed. I was talking to the few responsible, intelligent hams on the ng who actually care about the hobby. I'm not really talking to the mastur-debators here who are putting a bad reflection on the hobby, knowing that they (you) do not really care.

If they (you) cared, they (you) would be going so far out of your way to display ham radio's ass in public.

Charles, N5PVL

NTIA is studying BPL vis a vis USG HF ops ... the same sort of
ops that relegated us to 5 spot channels at 5 MHz instead of a band.

From talking with the folks there who are looking into it, they seem
just as concerned as we should be.

This is the "commerce" side of NTIA talking ... the spectrum management folks are hard at work evaluating how this will negatively affect USG systems, including homeland security ... this story's not over yet.

I believe (and hope) that when their testing is done, NTIA will express serious concerns and ask for significant protection from radiated emissions from BPL ... perhaps to the point that it becomes inviable ...

1698. Yet Another Anti-Amateur Radio "LennieRant" Unravelled.

Newsgroup: rec.radio.amateur.policy
Date: 2003-08-20 12:02:05 UTC
From: k4yz@aol.com
Message-ID: <5c01b95b.0308200402.3185848c@posting.google.com>
Source record: 75059

Other than the obvious idiocy of Lennie's rants, one need but mark time and watch the media to find the REAL truth.

The following items were cited in the September "CQ" magazine in the "Public Service" column by Mr. Bob Josuweit, WA3PZO.

On page 25: The topic is the Amateur Radio Spectrum Protection Act which is on the Hill for approval.

In sworn testimony before Congress, Mr. Edmond Thomas, the Chief Engineer for the FCC's Office of Engineering and Technology stated "I must not fail to mention the contributions of amatuer radio operators to public safety. The ham radio community has offered invaluable service to, and as, first responders in natural disasters, emergency situations and other crisis events."

Further testimony was offered by Dr. Norman Jacknis of New York. He is the Chief Information Officer of the Department of Information Technology of Westchester County, NY: "In the first hours following the attack of September 11th 2001, the only way we could coordinatethe sharing of firefighting, Medical Examiner (and) health and Information resources with New York officials was through the highly trained, volunteer amateur radio (ham) operators. This was a result of the fact that normal commercial communications services were unavailable. There was no other single, common communications medium, except the Amateur Radio Service. This irreplaceable resource must be protected against incursion by other interests."

Nothing quite like "disinterested parties" (read that "non-participants" in the Amteur Radio Service itself) make such absolute statements on the public record.

Let's all sit back and watch Dr. Spin Master (Lennie the Lame) try and dance the Misdirection Shuffle on this one. It ought to be a hoot!

>
> What would you call long distance communications?

Closed circuit communications. "Working DX" is an Amateur term,
applied to Amateur practice, involving radio communication between
Amateur Radio stations. His Army nets worked specific stations on
specific frequencies at specific times with overwhelming power and
resources. An idiot could complete a contact with that much
power...Ooooops...an idiot DID complete those contacts...forgive me...

> > For his frequent demeaning of not only individual Amateurs, but

There's very LITTLE truth.

And you're one of those who, just like Lennie, demonstrate a very
poor understanding of those same Amateur practices, so I am very
UNIMPRESSED about how you feel about his sleights.

> > For his frequent attempts to associate himself with Soldiers who

Many of my fellow Marines have fallen in combat. That is true. I honor them and wish they never had to be called upon to make that sacrifice, but they did.

UNLIKE Lennie, however, I have never tried to link myself to those Marines (or any other servicemember, for that matter) in such a way as to insinuate that I was somehow part and parcel of that sacrifice for my own benefit or "reputation".

THAT is disgusting.

BTW, other than Mark Morgan, to WHOM do you refer as "never served"...The nature of just about everyone's (regulars, that is...) military or government service here is well documented.

> > For countless lies, mistruths (especially that one about "get my
> > Extra Lite out of the box...) and use of profanity and insults...
>

How "obviously"..?!?! Is anything I said untrue...?!?!

> > Steve, K4YZ
>
> At least you didn't start a new thread over it.

Nope...someone else did...But JUST FOR YOU, Brain, I started another one with yet another unravelling of your Rear Area War Hero's rants...That being how allegedly "unimportant" Amateur Radio is in the overall scheme of the radio world.

Seems he doesn't have the full appreciation of the pulse of the radio world as he alledges...Not that any of "us" didn't know already.

So far, Dwight, I ahve yet to see anything that is not true.

Furthermore, it is the "no code" crowd (really only two or three
people) who keep making "code testing" debates out of EVERY subject
brought to this forum.

For example, NO ONE who is "pro code" made an issue of the code
at all. We simply (and so far accurately) pointed out the rantings of
a few.

Kim and you both hold strong opinions, but I would not put either
of you in contention for a nomination!

Uhhhhhh...Derek, Old Man...it has NOT been "removed".

The text of S25.5 was changed so as to allow specific
administrations to determine wether or not to require code testing.

As of today it is still the law of the land in the United States,
and shall continue to be so until the FCC acts on the pending
petitions to remove it. I have no doubt it will be removed, but the
rulemaking process must and will be followed.

And rather than "take up knitting", may I recommend a remedial
English Composition course for you?

ah, but all he knows is that it is supposed to be in town somewhere. these tests may only cover a mile or two along one road. and as k1rfi found they aren't always on... and then again, could they have thrown in a placebo??? a claimed test area where they really didn't put it in just to see how many complaints they get?

Agreed! That has changed since the creation of FISTS, btw.

> > > It's really HARD to market a product that few want ...

What product do you refer to, Carl?

Morse code USE is second only to SSB on amateur HF. Contest
participation in Morse is growing while SSB participation is flat.
There are more Morse related products and suppliers now than in the
past 30-35 years.

And hams are USING the mode, even as you read this.

Perhaps the "product that few want" is technical knowhow. Most hams
nowadays use manufactured equipment. Some build kits. A very few
homebrew from scratch.

When I was first licensed 36 years ago, homebrew and kit stations were
common. Today homebrew stations are extremely rare.

> > > that's why the PCTA's feel the need for a government-sponsored support system.

You mean the written tests being a "government-sponsored support
system" for homebrewing? Because that's what a lot of the content of
those tests really is.

Which do you think is more common - hams who use Morse code or hams
who use 100% homebrew equipment?
>
> > >>NCI pettition is all opinion.

No, it's not.

It's a mixture of facts and opinions about what should be done to
change the rules.
> > >
> > > No ... the NCI petition is loaded with the facts about how any

> > > a better, more well-behaved, more technically competent operator, etc.,
> > > etc.

More opinions.
> > >
> > > The petition is chock-full of facts ...
> >
> > Well, that's your opinion anyhow! 8^)

No, it's true. Lots of facts. Also lots of interpretations of those
facts and opinions.

For example, Morse use by other radio services has all but
disappeared. That's a plain and simple fact.

Some say that since other services hardly ever use it, there's no need
for hams to have a test for it. That's an opinion, not a fact.

Many hams use Morse - that's a fact.

It makes sense to have a basic skill test for the mode - that's an
opinion.

Etc.

> > But seriously, if I could offer some advice. It is okay to have an
> > opinion. You have your's and I have mine.
> >
> > It's even okay to try to turn your opinion into the law of the land. If
> > enough people agree, it will happen.

Most laws are just that - codified opinion about what should and
should not be done.

For example - the passing grade on Element 2 is what...74%? Why not
80%? Or 70%? Or even 90%?

The passing grade is simply an OPINION codified into law. Last week I
took a 10 question test for work where the passing grade was 100%. No
wrong answers allowed. In the OPINION of the people giving the test,
100% was the minimum grade that would insure that we knew the

material. (Yes, I passed.)
> >
> > But there is a mistake of hubris in believing that ones own personal

1711. One can use legally the HF bands in USA without CW exam

Newsgroup: rec.radio.amateur.policy
Date: 2003-08-20 17:55:47 UTC
From: Fritz Wuehler <fritz@rodent.frell.eu.org>
Message-ID: <aa0a8472b464818f50c0c794605af40e@remailer.frell.eu.org>
Source record: 75075

Since August, 4th 2003, the ON1 in
Belgium (CEPT-class B license) can get a
ON4 call (CEPT-class A license) only by
paying a higher tax and without passing
a CW test (only 3 days delay to obtain
that).
Once they have got the ON4 call, they
can ask the right to use the HF bands in
USA with their "fake" CEPT-class A
license (due to the agreement between
CEPT and USA).
And on the HF bands, impossible to distinguish a old "true" ON4 from a new
"fake" ON4.

And who are the loosers in this story ?
American technicians waiting for the abolishment of CW in USA !

There is probably something in the US
legal texts saying that an american
citizen cant have less rights than
a foreign visitor in USA, so use that
to ask the abolishment of Morse in USA.

So does that mean that since my call is WB5RUE I should have to prove that I
am built like a road?

For those of you who missed that, "Rue" is the French word for road.

Kevin, WB5RUE

1713. BPL Reply Comments

Newsgroup: rec.radio.amateur.policy
Date: 2003-08-20 19:15:20 UTC
From: "Carl R. Stevenson" <wk3cqth@wk3c.com>
Message-ID: <cNP0b.576$6e5.77071@nnrp1.ptd.net>
Source record: 75077

TODAY is the deadline for filing Reply Comments with the
FCC on "BPL."

You have until midnight to file electronically via the FCC's
ECFS (Electronic Comment Filing System)
http://www.fcc.gov/cgb/ecfs/

Prepare your document as MS Word or Adobe .pdf
and follow the directions, using the "Submit a Filing"
link in the upper right of the above-linked page.

The "Proceeding Number" is "03-104" (without the quotes).

You can upload your Word or .pdf file by browsing to it
after you fill in the required "cover sheet" information, or
you can type in "informal comments" in the edit box (but
informal comments don't get the same attention as formal
ones ...)

For an example of the correct format, or if you're just
interested in seeing what I filed, you view a .pdf of my
Reply Comments (filed today) at my personal web
page.

Consider filing ... but keep it polite and don't "flame" the
FCC ... that will do more harm than good.

73,

> is supposed to be can't find it? <g>

I had NO problem finding it, but I had the advantage that Ed Hare had
told me where to look, knowing that I live not far away.

The fact that the deployment is limited makes it hard(er) to find if
you don't know where to look ... and lots of the wiring in that area
is underground, which makes it sort of a "best case scenario" ... with
more overhead wiring, it would be a lot worse (though it's awful in
the deployment area as it is ...)

Listen to Ed Hare's video on the ARRL website ... I can assure you
that Ed wouldn't "doctor" things even if the ARRL tried to tell him
to do so (not that I believe or am insinuating that they would).

If the trash you hear on the video for Test Area #3 (Emmaus) doesn't
bother you - especially considering it's a "best case" sort of situation
with a limited deployment - then you obviously don't give a damn about
amateur radio.

Wrong-O Steve-O.

It is interference when the ARRL is asked by the FCC to make a
proposal, refuses to do so because they cannot find leadership via a
poll, then want to get involved in the making of the NPRM prior to it
being released and prior to the comment period.

The were given an opportunity to lead in the restructuring. They
abdicated.

` The Amateur's Code
The Radio Amateur is

CONSIDERATE...never knowingly operates in such a way as to lessen the pleasure of others.

LOYAL...offers loyalty, encouragement and support to other amateurs, local clubs, and the American Radio Relay League, through which Amateur Radio in the United States is represented nationally and internationally.

PROGRESSIVE...with knowledge abreast of science, a well-built and efficient station and operation above reproach.

FRIENDLY...slow and patient operating when requested; friendly advice and counsel to the beginner; kindly assistance, cooperation and consideration for the interests of others. These are the hallmarks of the amateur spirit.

BALANCED...radio is an avocation, never interfering with duties owed to family, job, school or community.

PATRIOTIC...station and skill always ready for service to country and community.

--The original Amateur's Code was written by Paul M. Segal, W9EEA, in 1928.

This was taken off the ARRL website its a pity some don't read it instead of slagging of others

this is a copy of a reply I got from another post
Gee, I guess "Derek" has a point! I was a CB'er for a whole six months --
and that was seven years before I became a ham! However, "Derek,"
I'm not going away! You're going to have to deal with me and those like
me from now on! So don't get any ideas about being "equal" to your
20 WPM code tested, Extra-class SUPERIORS!!!

73 de Larry, K3LT
This is way too easy...

Larry read the lines LOYAL and FRIENDLY obviously the American code is a Load of B**L***S to you

Jim,

What electric utility do you work for? Or maybe it is the equipment manufacturer that sells the interface devices and equipment to the utility? Where they are testing BPL in Cincinnati, there is S9 noise and you can't get rid of it.

Duffy

> Of course, Jim. I clearly stated my numbers were a "rough estimate."
>
What I was getting at is that a test is just one data point. There are
hams who passed 20 per once-upon-a-time who would be hard pressed to
pass Element 1 today. And there are hams whose testing never exceeded
5 wpm who have gone far beyond 20 wpm. Etc.

And the same thing applies to the writtens.

They're all just one data point, often decades old.

> > The important point is that the number of US hams
> > is growing at a slow rate. Restructuring did not
> > result in a big change in growth. (snip)
>
> True. However, to make something out of that, one has to eliminate all
> factors outside restructuring.

Agreed! There are all sorts of factors - cost of equipment, antenna
restrictions, RFI concerns, even competing radio services. Not too
many years ago, it was common to encounter hams who had gotten
licenses for the express purpose of "honeydew" communications. Today
almost all of them have cellphones.

> In my last message, I hinted at factors such
> as the attitude of current operators towards those new to ham radio.

I hope you mean "the attitude of *some* current operators...."

> Today's
> new operator faces more ridicule and harassment than perhaps any new
> operator in the history of this activity.

I don't know about that. Around here, and everywhere else I've lived
since becoming a ham 36 years ago, newcomers of all ages, sizes,
genders, ethnicities, etc., are welcomed and encouraged, as a general
rule.

Yes, there are a few sourpusses with negative addytoods. They've been around forever. I can recall comments that Novices were "not real hams" and that my homebrew CW rigs were "not real radios", etc., etc., ad infinitum. Ol' W2OY was well known for his misanthropic "no kids, no lids, no space cadets" tirades. Oddly enough, most of those folks are not hams anymore, but I am. bwaahaahaa....

If you look for and listen to the naysayers and sourpusses, it just encourages them.

> And lets face it, that new
> operator is not likely going to invite friends or family members to join
> after an negative exchange with Larry in this newsgroup (or someone like him
> here or elsewhere).

Sure.

But are folks like that the rule or the exception?

> Clearly, the attitude of current operators has a role to
> play in the lackluster growth of ham radio today, perhaps even far more than
> restructuring at this point.
>
True - but consider also the attitudes expressed by a very few newcomers towards experienced amateurs. Should we welcome a newcomer who says all hams are fat and that no EE with self-respect would use Morse code? How about one who insults others' employment, technical knowledge, education, ethnicity, appearance, age, and name?

I am fortunate that I am far enough from the Emmaus, PA "pilot"
area that PP&L is running (Test Site #3 on Ed Hare's video on
the ARRL web page) that I'm not noticing interference here from
that small deployment.

However, if I go down off the hill into the deployment area, the
noise is HORRIBLE throughout the HF bands ...

The ARRL is not spreading FUD about Access BPL ... it's
the truth and I've heard it for myself.

Carl - wk3c

Brian:
There's 'life', then there's your perception of life. Most readers here know
too well that the two are not congruent.

Perhaps there's still time for you to learn the difference.

Is this in the FCC regulations? If not, it is just a recommendation and therefore has no valid basis to be followed, or to be identified as "The Amateur's Code".

Kevin:

Not at all.

Kim came into this newsgroup sporting her inane, suggestive call sign,
which is demeaning to all YL hams and gives a negative image to them,
and expected all of us to love it, and her, for being so clever. She even
went so far as to E-mail to Riley Hollingsworth in an attempt to get him
to endorse it. All she got for her trouble is a warning that it has the
potential to take the ARS "...one step closer to extinction." Ever since
then, all she's done as far as participation in this newsgroup is throw
one-liner agreements with the NCTA's, plus long quotes of what others
have said with a "ROFLMAO" as her only commentary, and called it
good. Whenever I call her on the carpet for it, all she can do is make
a feeble attempt to throw insults. Your callsign is perfectly OK; hers
is an absurdity.

Kim:

You haven't responded to anything ANYONE has said that is "logical and
intellectual," so why should you start now? You'll just do what you always
do, such as with my "challenge" offered in this thread. You'll simply
dismiss it, without making an effort to take it seriously. No, AFAIC, there
is never going to be a "next time" as far as YOU'RE concerned. You
cannot handle me, and you know it; therefore, you simply run home to
Momma whenever the going gets rough. Care to prove me wrong?
Respond to my challenge. It's as simple as that.

Derek:

No, it's just that YOU are! BTW, this is Usenet, NOT Amateur Radio.
Amateur Radio is something that's done over the air, not over the
internet. The Radio Amateur's Code doesn't apply here. Here in rrap,
if you behave like a whining, complaining little child, you'll get clobbered
right between the eyes. On the air, all I'd do is simply QSY. You seem
to be sorely lacking in situational awareness.

>him on an intellectual level. Nada. Zip.

Kim:

I'm sorry, dear. I didn't know that you thought that your one-liners
showing sucking-up agreement, and your "ROFLMAO's" constituted
"communicating on an intellectual level." I guess I'll have to view
these in a different light, or at least one which matches my expectations
of today's dumbed-down hams such as yourself!

>There are people in this
>newsgroup who get communicated with, and there are people in this newsgroup
>who get communicated to. Larry is in the latter.

And the sad part is folks, Kim actually believes this! Well, it probably
makes her feel good about herself for a few minutes, so let's just let
her have her little fantasy!

>For all the times I've
>pissed people off, across the board, there are still times when threads have
>been maintained for a good length of time that involved intellectual debate.
>Same for you. Same for any of us "antagonizers" as we are affectionately
>called.

That's right. Kim is loved and respected in this NG, and I'm not! Make
sure you got that clear, Dwight! After all, being loved and respected in
this NG means something to Kim!

>But, not for Larry, not for a couple of others. Larry isn't "spewing"
>anything that sticks; his kind of logic and reasoning are quite in the
>minority in ham radio.

And Kim is in solid agreement with whatever she considers to be the
"majority." That way, she doesn't have to take the heat for taking any
kind of unpopular stand on anything. And from what I've seen of Kim's
abilities in this NG, I think that's the way she should go.

Turns out I did locate it on my first pass but was not sure what BPL
sounded like so I kept sniffing around the town yesterday. It's only
in a specfic area in the town so I restricted my listening today to
that area once Carl alerted me to the details offline. What I heard
today can't possibly be the "fullbore" BPL others have described.
They're definitely playing with it.

The attitudes of all operators, good or bad, are factors to some extent. However, one person with a bad attitude can often overwhelm several with more positive attitudes.

Probably all true, but the overall nastiness seems to have increased dramatically (perhaps due to the internet, but there nonetheless).

> If you look for and listen to the naysayers and
> sourpusses, it just encourages them.

I wish it was that easy. For example, I've tried hard to ignore Larry's messages. However, since he posts so much, he is almost impossible to ignore. Even if I ignore the messages he posts, I endlessly run into replies to his messages. In the end, the only clear way to completely get away from his nonsense is to leave this newsgroup (an occasional break from this newsgroup is probably not a bad idea anyway).

> True - but consider also the attitudes expressed
> by a very few newcomers towards experienced
> amateurs. (snip)

Most often posted after a run in with Larry or his ilk. My message to Larry was obviously filled with anger, which is not my normal response to even the most outrageous messages in this newsgroup. But, after enough of his garbage, it took that just to let off some steam.

Larry, you really need to get off the "liberal" nonsense. Your attitudes about code are more liberal than most and your attitudes towards others are more akin to that of the deep woods redneck than that of a conservative.

Your desire for government protection of code testing to maintain your delusions of status is not unlike the liberal seeking protection for welfare state-like government benefits for other situations.

And, if you don't know what a deep woods redneck is (a deep woods redneck is not the typical redneck), and how their attitudes are similar to yours, watch the movie "Deliverance."

Steve, you obviously didn't notice that the people Larry nominated are those he most often targets with his code debate ramblings. By mentioning those people here, his ultimate goal was to bring that debate here. After all, the main reason he disagrees with those people, hence his nomination here, is their opposition to his position on code. Therefore, any response to his nomination of those people had to include something about the code debate.

Where exactly in Michigan? It's a large state, looking at it from a 2M perspective....

Oh, by the way, I just found out that in the 1830's, a war.. that's right.. a war was fought between Ohio and Michigan over possession of Toledo.

Michigan won.

1755. 30 Steps for all New Hams

Newsgroup: rec.radio.amateur.policy
Date: 2003-08-21 05:51:16 UTC
From: wa8ulx@aol.com
Message-ID: <20030821015116.12265.00000257@mb-m20.aol.com>
Source record: 75170

The 30 Steps below will help all New Hams, it will also help you to find others just like yourself. These 30 steps should also be added to the present writtens.

Step One: Use as many "Q" signals as possible. Yes, I know they were invented solely for CW and are totally inappropriate for two meter FM, but they are fun and entertaining. They keep people guessing as to what you really meant. I.E. "I'm going to QSY to the phone." Can you really change frequencies to the phone? QSL used to mean, "I am acknowledging receipt", but now it appears to mean, "yes" or "OK". I guess I missed it when the ARRL changed the meaning. It is also best to use "OK" and "QSL" together. Redundancy is the better part of Lid-dom.
Step Two: Never laugh when you can say "HI HI". No one will ever know you aren't a long time CW rag-chewer if you don't tell them. They'll think you've been on since the days of Marconi.

Step Three: Utilize an alternative vocabulary. Use words like "destinated" and "negatory". It's OK to make up your own words here. I.E. "Yeah Tom, I "pheelbart zaphonix" occasionally myself."

Step Four: Always say "XX4XXX" (Insert your own call) "for I.D." As mentioned in Step One, anything that creates redundancy is always encouraged. That's why we have the Department of Redundancy Department. (Please note that you can follow your call with "for identification purposes" instead of "for I.D." While taking longer to say, it is worth more "LID points".

Step Five: The better the copy on two meter FM, the more you should use phonetics. Names should be especially used if they are short or common ones. I.E. "My name is Al... Alpha Lima" or "Jack.. Juliet Alpha Charlie Kilo." If at all possible use the less common HF phonetics "A4SM... America, Number Four, Sugar Mexico." And for maximum "LID points", make up unintelligible phonetics. "My name is Bob... Billibong Oregano Bumperpool."

Step Six: Always give the calls of yourself and everyone who is (or has been) in the group, whether they are still there or not. While this has been unnecessary for years, it is still a great memory test. You may also use "and the group" if you are an "old timer" or just have a bad memory. Extra points for saying everyone's call and then clearing in a silly way "K2PKK, Chow, Chow."

Step Seven: Whenever possible, use the wrong terminology. It keeps people guessing. Use "modulation" when you mean "deviation", and vice-versa.

Step Eight: If someone asks for a break, always finish your turn, taking as long as possible before turning it over. Whenever possible, pass it around a few times first. This will discourage the breaker, and if it is an emergency,

encourage him to switch to another repeater and not bother you.

Step Nine: Always ask involved questions of the person who is trying to sign out. Never let him get by with just a "yes" or "no" answer. Make it a question that will take him a long time to answer.

Step Ten: The less you know on a subject, the more you should speculate about it in the roundtable. Also the amount of time you spend on the subject should be inversely proportionate to your knowledge of the subject even though you have no damn clue.

Step Eleven: Always make sure you try to communicate with only a handheld and a rubber duck antenna. Also, make sure you work through a repeater that you can hear very well, but it cannot hear you. This will put out a kind of "LID mating call": "Well, Joe, I can hear the repeater just fine here. I wonder why it can't hear me?" You will score maximum LID points if you are mobile, and with the radio lying in the passenger seat.

Step Twelve: If you hear two amateurs start a conversation, wait until they are twenty seconds into their contact, and then break in to make a call, or better yet to use the auto-patch. Make sure you keep the repeater tied up for at least three minutes. This way, once the two have re-established contact, they won't even remember what they were talking about.

Step Thirteen: You hear someone on the repeater giving directions to a visiting amateur. Even if the directions are good, make sure you break in with your own "alternate route but better way to get there" version. This is most effective with several other "would-be LIDs", each giving a different route. By the time the visiting amateur unscrambles all the street names whizzing by in his mind, he should have moved out of the range of the repeater. This keeps you from having to stick around to help the guy get back out of town, later.

Step Fourteen: If an annoying station is bothering you, make sure your other "LID" buddies have a "coded" frequency list. Even though "CODES" are strictly forbidden on Amateur Radio, it's really neat to practice "James Bond" tactics.

Step Fifteen: Always use the National Calling Frequency for general conversations. The more uninteresting, the longer you should use it. Extra points are awarded if you have recently move from an adjacent frequency for no reason. Make sure when DX is "rolling" in on 52.525 that you hang out there and talk to your friends five miles down the road about the good old CB days!

Step Sixteen: Make sure that if you have a personal problem with someone, you should voice your opinion in a public forum, especially a net. Make sure you give their name, call, and any other identifying remarks. For maximum points, make sure the person in question is not on the repeater, or not available.

Step Seventeen: Make sure you say the first few words of each transmission twice, especially if it is the same thing each time. Like "roger, roger" or "fine business, fine business". I cannot stress enough about encouraging redundancy.

Step Eighteen: If you hear a conversation on a local repeater, break in and ask how each station is receiving you. Of course they will only see the signal of the repeater you are using, but it's that magic moment when you can find a fellow "LID", and get the report. Extra points are awarded if you are using a base station, and the repeater is less than twenty-five air miles from you.

Step Nineteen: Use the repeater for an hour or two at a time, preventing others from using it. Better yet, do it on a daily basis. Your quest is to make people so sick of hearing your voice every time they turn on their radio, they'll move to another frequency. This way you'll lighten the load on the repeater, leaving even more time for you to talk on it.

Step Twenty: See just how much flutter you can generate by operating at handheld power levels too far away from the repeater. Engage people in conversations when you know they wont be able to copy half of what your saying. Even when they say your uncopyable, continue to string them along by making further transmissions. See just how frustrated you can make the other amateur before he finally signs off in disgust.

Step Twenty One: Use lots of radio jargon. After all, it makes you feel important using words ordinary people don't say. Who cares if it makes you sound like you just fell off Channel 19 on the citizen's Band? Use phrases such as "Roger on that", "10-4", "I'm on the side", "Your making the trip" and "Negatory on that".

Step Twenty Two: Use excessive microphone gain. See just how loud you can make your audio. Make sure the audio gain is so high that other amateurs can hear any bugs crawling on your floor. If mobile, make sure the wind noise is loud enough that others have to strain to pick your words out from all the racket.

Step Twenty Three: Start every transmission with the word "Roger" or "QSL". Sure, you don't need to acknowledge that you received the other transmission in full. After all, you would simply ask for a repeat if you missed something. But consider it your gift to the other amateur to give him solace every few seconds that his transmissions are being received.

Step Twenty Four: When looking for a contact on a repeater, always say your "listening" or "monitoring" multiple times. I've always found that at least a half dozen times or so is good. Repeating your multiple "listening" ID's every 10 to 15 seconds is even better. Those people who didn't want to talk to you will eventually call you, hoping you'll go away after you have finally made a contact.

Step Twenty Five: Always use a repeater, even if you can work the other station easily on simplex ... especially if you can make the contact on simplex. The coverage of the repeater you use should be inversely proportional to your distance from the other station.

Step Twenty Six: When on repeaters using courtesy tones, you should always say "over". Courtesy tones are designed to let everyone know when you have unkeyed but don't let that stop you. Say "over", "back to you" or "go ahead". It serves no useful purpose but don't worry, it's still fun!

Step Twenty Seven: Use the repeater's autopatch for frivolous routine calls... especially during morning or evening commute times. While pulling into the neighborhood, call home to let them know you'll be there in two minutes.... or, call your spouse to complain about the bad day you had at work. After all, the club has "measured rate" service on their phone line so they get charged for each autopatch call. Your endeavor is to make so many patches in a year that you cost the club at least $20 in phone bills. That way you'll feel you got your money's worth for your dues!

Step Twenty Eight: Never say "My name is ....." It makes you sound human. If at all possible, use one of the following phrases: a) "The personal here is ..." b) "The handle here is..."

Step Twenty Nine: Use "73" and "88" incorrectly. Both are already considered plural, but add a "s" to the end anyway. Say "73's" or "88's". Who cares if it means "best regards" and "love and kisses." Better yet, say "seventy thirds"! (By the way, seventy thirds equals about 23.3).

Step Thirty: If the repeater is off the air for service, complain about the fact that it was off the air as soon as it's turned back on. Act as though your entire day has been ruined because the repeater wasn't available when you wanted to use it. Even thought you have never paid a penny to help out with the upkeep of it.

> Hard to imagine having an element 2, 3, and 4, but no
>element 1.

Not really!

Back before restructuring, we had the following elements (IIRC):

1A - 5 wpm code
1B - 13 wpm code
1C - 20 wpm code
2 - Novice written
3A - Tech written
3B - General written
4A - Advanced written
4B - Extra written

Before March 21, 1987, the Tech and General used the same written, called Element 3. When they split that into two separate tests, the names were changed to 3A and 3B. A similar split took place back in 1967 when the Extra written (Element 4) was split into Advanced and Extra.

Etc.

>more overhead wiring, it would be a lot worse (though it's awful in
>the deployment area as it is ...)

Indeed! Even if the underground wiring doesn't radiate much, each house's
wiring will.

It's also possible that the test areas are not running 24/7.
>
>Listen to Ed Hare's video on the ARRL website ...

I did. It's scary. Even with a little antenna it's S9+ noise all over the place
- from ONE site.

>If the trash you hear on the video for Test Area #3 (Emmaus) doesn't
>bother you - especially considering it's a "best case" sort of situation
>with a limited deployment - then you obviously don't give a damn about
>amateur radio.
>
WELL SAID!

IIRC, the test sites meet current Part 15 levels. And the BPL folks want those
levels RAISED because the current levels require too many repeaters.

One major reason aerial lines are so lossy at RF is that they radiate! How
about that!

--

The whole BPL thing is kinda like an industry saying they want to build a new
plant that will spew out large amounts of avoidable pollution - while their
competitors are not allowed to. The industry says they're not going to put
pollution controls on their plant. Instead, they say, if the dirty air bothers
anyone, those who are bothered should simply wear a gas mask.

My comments and reply comments are filed - how about YOU?

The term "handle" was used by hams long before cber's were ever
allowed to screw up the radio spectrum.

HI HI!!! <VBG>

Really. all hams should see themselves in that, one way or another.
While I'm not as guilty as most, I've done some of those things.

I posted this to a small list. I left your headers intact, except
AOL. Didn't want to embarrass you with that.

Carl,

I read yours.

GOOD JOB.

We disagree on many things but if BPL is implemented on a wide scale
those disagreements will all be moot points.

Last time I looked the comment total was approaching 5000.

Maybe it will be enough to convince the FCC that, as you wrote,

"Access BPL is a bad idea".

Thanks

What a hypocrite.

You have been doing virtually the same crap on
rec.radio.amateur.digital.misc for years... debating endlessly and
meaninglessly... bringing up a need to revive long dead HF-based PBBS
systems, and denouncing any attempts at modernization.

So - what brings you over here? Is it the fact that your ilk has run
everyone off rradm, and that you've got nobody to argue with there
anymore? (they've all moved on to more productive forums and
applications).

You and that kook from Oregon are just as thick-skulled as these
CODE-obsessed fruits... you BELONG here.

Well Dan I figured someone needed to describe the present situation in Ham Radio. Now if the FCC was smart, they would just test the New Guys on the 30 Steps and be done with it.

So what Walt? Your type talkes about the 'rights' of the raghead
murderers. How about the rights of the 9 to 5 innocent victim of the
raghead murders?

You dont seem to understand how this country reacted to 9/11. And I think I
know why. Your country and Europe in general is used to being totally
destroyed, or at least nearly, every century or so. Its normal to you. Not
to us. We in the USA actually believed we were safe from that sort of crap.

Well we now know we are not. We have just been rudely awakened into the
real world. Lucky for us we have the means to AVENGE it all.

We are dangerous now. You better believe it. But I think, or should I say,
hope we will not 'overdue' it. But I assure you we will not allow this
terrorism to stand. We will defend ourselves. And if that requires a
'pre-emptive first strike' then it shall be. Keep that in mind. We are not
walking away from this.

Thanks for that Steve. In the 'fun' here on USENET we sometimes forget that
ham radio is indeed more than general chit chat on the bands.

I hope we are remembered by our 'caretakers' the FCC in this BPL problem.

>described.

Brian, go easy on Steamy. He doesn't know about all the hundreds
of communication carrier companies that were doing point-to-point
radio communications before he was born. He doesn't know that
militaries around the world were using radio for primary long-distance
communications before he was born. He just doesn't know.

"DX" as a term/phrase, came from commercial communications folks
standing for "distance." It used a very long time ago as a kind of
morse code shorthand. Steamy just doesn't know about that.

>> applied to Amateur practice, involving radio communication between
>> Amateur Radio stations. His Army nets worked specific stations on

>> resources. An idiot could complete a contact with that much
>> power...Ooooops...an idiot DID complete those contacts...forgive me...
>
>Now you're calling DoD communications idiotic? You really don't like

>the military much, do you?

Steamy never did any communications while in the military...other than talking on the telephone. :-)

>Why would you want Army communications to get through only some of the
>time?

It's painfully obvious, Brian. Steamy hates me. I served in the US Army so, naturally to him, anything Army is subject to hatred, villification, and denigration.

Steamy never did any primary communications while in the USMC. Naturally he resents that anyone else did.

Steamy cannot possibly understand the importance of primary comm needs of an area command or that it must continue to be available 24 hours a day, 7 days a week, all year long. Back before the DSN and optical fiber lines and communications satellites, the primary long-distance communication medium was HF radio. Army radio ADA served the all-branch Far East Command in the early 1950s and never failed...even during a 3-hour solar flare in 1955 that disrupted the longest circuites...the shorter ones continued to operate uninterrupted.

"Overwhelming power" must be the 4 KW PEP Western Electric LD-T2, all of 6 db higher than maximum legal US amateur RF output. It could be the old Press Wireless 15 KW CW (but always used FSK TTY), the 40 KW Collins-made AN/FRT-22 didn't arrive until 1955. All that plus a small airfield containing the wire antennas helped "Get The Message Through" 24/7. The thousands who were assigned to ADA didn't have much choice but to make sure the communications got through. It did.

>Have you never heard of "Peace through superior firepower?"

Steamy can only think of the hymnal about Montezuma and Tripoli.

Steamy is a mighty macho marine morseman, far superior to ordinary folk. He is a regular Atilla the Ham. :-)

>> > > For his frequent demeaning of not only individual Amateurs, but

>> way as to insinuate that I was somehow part and parcel of that
>> sacrifice for my own benefit or "reputation".
>>
>> THAT is disgusting.
>
>Why do you continually distance yourself from your military heritage?

Steamy is hell bent on doing anything he can to say bad things about
his "enemies." He tries to turn around statements I say so that they
are pejoratives.

Fact is, long ago I served in the US Army and was assigned to a Signal
Battalion that had 19 casualties (all killed) on July 1, 1950, in Korea.
They and the four USAF crew members were on a TDY under direct
orders from General MacArthur's headquarters to help improve the
communications in Korea during the first two weeks of the Korean War.
In the next six years there would be four more members of that Signal
Battalion who became casualties of the Korean War and the Korean
Truce (which is still in effect, the War never being officially over). I've
stood retreat for those 19 and the billet where I was in for nearly two
years was renamed for one of the casualties, Cpl Elmer Hardy. Hardy
Barracks still exists today in Tokyo, much reduced in size, but still
holding the offices of the Pacific Stars & Stripes military newspaper.

Steamy's concept of "honor" only applies to whatever and whomever He
"honors." He cannot comprehend anyone else honoring their old
military unit or even knowing details of that unit. Such seems to be an
abomination with him.

Steamy, and some others, are resentful and some probably envious that anyone else had any primary communications tasks over HF a half century ago. He still lives in a fantasy world of amateurism where ONLY amateur radio has "conquered" HF and ALL radio communications is rated and gauged by amateur recreational and hobby activities on HF radio. That is a terribly elitist...and very false...viewpoint. All it shows is his
ignorance of the larger world of commercial and government radio.

Steamy can't admit to such ignorance. To do so would be to "lose face" and he would disgrace his personal opinion by such admission. He MUST keep up the image of the "expert," the "pioneer of HF radio" through amateurism of the 1930s. Such is a substitute for his terminated military career. He glories in the rank, status, privilege of amateur extra and looks
down on all not achieving his personal stature...typical of those who have not achieved much rank, status, or privileges in real life.

I will be glad and honored to link my name with my old Signal Battalion anytime, anywhere. That Battalion still exists in spirit today as the 78th Signal Service Battalion, Camp Zama, Japan, under the command of the 516th Signal Brigade headquartered at Fort Shafter, Hawaii, and attached to the US Army Pacific as its main communications provider.

>> > > The envelope pleeeeeeease! (drom roll ensuses....)

>> >
>> > Obviously disrespectfully submitted.
>>
>> How "obviously"..?!?! Is anything I said untrue...?!?!
>
>Amazingly, everyone has their own version of "the truth." Yet, truth
>and disrespect are not the same thing.

Steamy has his Fantasy. He can change the "truth" in that Fantasy to be whatever he wants. It pleasures him greatly to heap abuse on those who have made it in the real world and done more than he was able to do.

>
>> > > Steve, K4YZ
>> >
>> > At least you didn't start a new thread over it.
>>

>> another one with yet another unravelling of your Rear Area War Hero's
>> rants...That being how allegedly "unimportant" Amateur Radio is in the
>> overall scheme of the radio world.
>
>Congratulations. You are so easy to manipulate.

Heh heh...Steamy still hasn't given any details of his own claims to
honor and glory of "seven hostile actions." He never will. :-)

>> Seems he doesn't have the full appreciation of the pulse of the
>> radio world as he alledges...Not that any of "us" didn't know already.
>>
>> Steve, K4YZ
>
>What did he say that was untrue?

Steamy is still wrapped up in his Fantasy.

I've had a full working career in radio-electronics and that is archived in
records other than "Google." My military record is archived at NARA in
St. Louis and Eugene Rosenbaum, N2JTV, served in my Signal Battalion
at the same time I did. Gene is also in retirement from a career at FAA
but very much alive. My colleague at Rocketdyne and manager at RCA
is Jim Hall, KD6JG. A good friend is Al Walston, W6MJN, who was
Best Man at my wedding. I've been in contact with Jim Brendage, a
civilian engineer at ADA and a former USAF NCO who served at ADA's
old transmitter site after the USAF took over all HF comm in 1963. The
callsign of the US Army Pacific Headquarters (Hawaii) is still ADA.

According to Steamy, all those statements are "lies." Despite their real
world existance, Steamy doesn't want to admit their truth. He calls
anything I say a "lie." It's just not worth it to attempt discussion with a
psychotic.

Some else in here who used to quote an old baseball player is fond of
repeating "It ain't braggin' if ya done it." I did it. I don't have to
brag.

This actually is quite good and applies to the old timers as well. I have one question if anyone remembers back to around 1959. The guy who got me *really* interested in amateur radio was Russ, W2ZS. I met him around 1959 or possibly 1960 and remember him making contacts when I was invited into his shack. I do remember folks back when using "the handle here is ...". My question is did that start with CB or did CB pick it up from amateurs originally? It seems (at least back then) more like the Southern "y'all come again real soon". Sort of folksy and warm if grammatically incorrect.

I've heard many of the points you mention. I just avoid the issue on the air. While I agree with your points, there is no point in turning a repeater into a flame-fest :))

>
This isn't as stupid as it first sounds. You are really asking how the
repeater's receiver is
hearing you. Maybe you just repaired your rig or antenna, and need to
know if it was
a success. As the repeater can't tell you, because it's not a human,
you ask the humans

who are hearing the repeater's output cleanly how you are doing.

My kind of people? Do you mean people like yourself? I see you've posted a few messages in the CB newsgroup (well over 100 according to Google). Most of my messages there were cross-posted to rec.radio.cb from messages posted elsewhere, but most of yours were posted directly in that newsgroup.

In fact, the first message I ever saw from you was in that newsgroup. If I remember correctly, you were talking about the big tube-type linear amp you were using with the 10 meter radio you had modified to use on the frequencies in and above the CB band. Perhaps I'm mistaken, but I certainly don't think so.

So do I, but if it's a choice of dropping the code test NOW and
leaving a hole where Element 1 used to be to be dealt with at some
future date, or futzing around for months with a total reorganization
of test elements, privileges, band segments, etc via a series of NPRMs
in a taffy-pull that will make r.r.a.p. look like a sedate cricket match,
I take the former every time.

Have you noticed even the press has had a hard time keeping a straight face when talking about the California recall vote? First, we have a midget who insists he's the protest vote. Then, we have oversized guy who still can't say his name properly after living in the country for decades. And then we have a cross-dresser certain to bring a new sense of fashion consciousness to the job. And we can go on and on. This is turning out to be one of the wackiest elections I've ever seen.

Home, as usual.

There are three screen names on this account. One is used by other(s), one is
my call and this one is a "universal spare" based on my old call. For some
reason AOL is having trouble with NG access on my other screen name so I
switched over to this one for a while.

But I'm still me.

I'm afraid we're gonna get the taffy-pull/furball anyway, though. By inaction,
FCC has opened the floodgates to a zillion petitions on everyhting under the
sun. Which will then be smooshed into an NPRM, and finally maybe some rules
changes that have little resemblance to said NPRM.

Maybe somewhere in there that stupid BPL idea will get squelched.

No offense, Phil, but the fact that we even have to fight as bad an idea as BPL
has caused my respect for a certain "expert agency" to all but disappear.

>> I think you meant "rationale"
>>
>> And here it is:
>>
>> 1) Morse code is widely used in the ARS, particularly HF/MF amateur
>> radio.
>
>So??? That use is purely a matter of choice ...

The point is that it makes sense to test for things that *hams* actually do.
Some folks, like yourself, insist on pointing out that *other* services have
all but abandoned use of Morse code. So???

Should that fact make hams not want to use it, or be tested for it?

> those who chose to use
>Morse should have the freedom of choice to learn it and to so ...

Agreed!

And those who choose to other things should have the freedom of choice to learn
it and do so...

>however,
>at the same time, those who are not interested in using Morse should not
>be forced to learn it in order to gain HF privileges ...

Nobody is "forced". It's a test requirement, just like the stuff in the
writtens.

Would you agree with this statement:

however, at the same time, those who are not interested in building radios
should not be forced to learn how they work in order to gain amateur radio
privileges ...

>> 2) Knowledge of morse code can only be measured by a practical skill
>> test.
>
>Excuse me ... I think you mean "proficiency in " not "knowledge of" ...

No, I mean "knowledge of". Skills are a form of knowledge, as are facts and
concepts. Perhaps it would be better to write "practical knowledge"

For example, consider base 10 natural number arithmetic

"2 + 2 = 4" is a fact.

"Addition is a mathematical operation in which two numbers are combined to get a third number which is never less than either of the first two numbers" is a concept.

The ability to add numbers rapidly without reference to a lookup table, calculator or pencil and paper is a skill.

The Morse test which is Element 1 tests the skill of receiving Morse code at a very basic level.

>those are important distinctions ...

See above.

>I have no problem with test questions
>on the theory of OOK Morse ("What's the necessary bw for x wpm?"
>"What are "key-clicks" and how can they be prevented?" etc.)

Those are fact and concept questions.

>But a
>proficiency requirement as a condition of access to HF is totally out of
>line.

Element 1 is in no way a test of "proficiency". It's a skill test at a very basic level. To call it a proficiency test is to demonstrate ignorance of the word proficiency.

>> 3) Morse code offers unique advantages to the radio amateur, but these
>> advantages are only available if Morse code skills are learned.
>
>Other modes also offer "unique advantages" ...

Yup - but not like Morse.

For example, how many hams do you know who use homebrew SSB stations on the amateur HF bands? Would you recommend that a beginner in radio build such a station as a first project?

> those advantages are in
>the eye of the beholder and largely subjective ... those who believe that
>it is advantageous to learn/use Morse will do so ... those who don't should
>not be forced.

Then let's not force people to learn pother stuff they're not interested in. There's a lot more Morse operation going on today than large scale homebrewing...
>
>> 4) All of the above support the Basis and Purposes of the ARS.
>
>The FCC disagrees ...

Yet they wouldn't include a sunset clause back in 2000 and they're making all of us go through an NPRM cycle all over again. If FCC thinks there really is "no regulatory purpose" to a code test, WHY are they dragging their feet and doing the whole circus AGAIN?

FCC also thinks BPL is a good idea, even though you, W1RFI, and many others have produced piles of evidence that it is unarguably a very very BAD idea. Heck, any "expert agency" that would even consider such a nutty porposal doesn't deserve the title "expert".

You've heard the stuff yourself, from a test location where the lines were BURIED. Did it take you more than 30 seconds to come to the conclusion that widespread deployment of access BPL is simply nuts? I bet 3 seconds was enough.

Yet FCC continues to allow testing and evaluation, and entertains the possibility of RAISING part 15 levels! Some "experts"!

I won't even get into the homogenization of broadcasting thing, where Congress is in the process of slapping Mike Powell's hand and saying "NO! BAD IDEA!!"

The mere fact that FCC does something doesn't make it right - just legal.

No ... because, even if you don't build your own radios, you are responsible
for their proper operation. How could you possibly know something was
wrong if you had no knowledge of how the radio worked?

This is an interference control issue ... a technical matter ... and
knowledge
of this IS required in order to be competent to operate a station in full
compliance with the rules.

> >> 2) Knowledge of morse code can only be measured by a practical skill

and
> concepts. Perhaps it would be better to write "practical knowledge"

No, it's proficiency that the test measures ... proficiency in decoding
Morse
in one's head at some specified speed. And that's ALL it is according to
the FCC (see the "No Code Technician" decision from 1990 and the R&O
in 98-143 ... you'll see EXACTLY that in both documents).

> The Morse test which is Element 1 tests the skill of receiving Morse code
at a
> very basic level.

Exactly, it measures a specific level of proficiency.

>
> Element 1 is in no way a test of "proficiency". It's a skill test at a
very
> basic level. To call it a proficiency test is to demonstrate ignorance of
the
> word proficiency.

Proficiency is measured against some "yardstick" ... in the case of Morse,
the FCC has (currently) determined the yardstick to be 5 wpm.

You can argue all you want, but that's the way it is ...

> Yet they wouldn't include a sunset clause back in 2000

True ... they didn't include a sunset clause.

> and they're making all of us go through an NPRM cycle all over again.

How the FCC will handle this is yet to be determined ...

> If FCC thinks there really is
> "no regulatory purpose" to a code test, WHY are they dragging their feet
and
> doing the whole circus AGAIN?

See my last sentence ...

[snipped unrelated discussion of BPL]

While Brian and I (and others) may disagree on the Morse issue, that
is no reason that we can't work cordially and cooperatively on important
issues where we are "on the same page."

There is worldwide packet radio activity on
27540 kHz. Which qsy to 6890 at night. I know
of some people in the Tampa area who operate on
this frequency and have qso'd other packet stations
in the U.S. as well as worldwide DX. Alfa-Delta
domestic call signs & Rapert International calls are
being used on the frequency. Does anybody know
the policy and protocol for hobby packet ops?

tnx,

Amateur radio isn't going the way of the horse and buggy, but you make a point about the members of some amateur clubs. You're probably better off meeting a few amateurs on an individual basis and getting your own group up and running. Other than that, despite the efforts of some, amateur radio continues to grow. There are so many modes and people to work that the grumps can't cover even a majority of bases :)) Even CB has its' own small groups that enjoy each others company - say the bunny hunters, the avid DXers and so on. The difference is that very few (if any) CBers have so little to do that they simply flame the newsgroups.

This is something no one wins. First we have a power grab by the
Repub's who have figured out that in any election, it will be possible
to get enough names on a petition to force a recall. I hope they realize
they opend a Pandora's box, and for what? Governing a state that they
were partially involved in making a major mess?
They are so desperate to get someone in office, that they are trying to
elect a Republican who is more like a Democrat than anything else.

The Dems, instead of fielding a smart team in case the recalll comes,
have put together a list of clowns that are a true embarassment to
democracy, leaving the one serious contender with the election plan from
hell, that is to vote for no recall, but vote for me in case there is.

To think that the next Gov. there might be elected with only a few
percent of the vote.

Makes me proud I'm a registered Independent.

I wonder if there is going to be a recall on the governer elected in
the recall vote... if there is a recall....

Cindy -- you have to understand you asked a question about illegal CB operation and Hams are very much against ANY illegal operations on any band. Kinda like asking an atheist question in a Catholic Church.

Go to rec.radio.cb --- you will get sympathy there and also probably bad mouthed about illegal operations. But perhaps you didn't know it was illegal -- now you do.

Read FCC rules at URL:
http://wireless.fcc.gov/services/personal/cb/

As far as your visit to the club meeting -- here in Southern California we have a youth group of young Hams under the age of 18, about 20 of them. We have donated lots of equipment to their schools, given them free books, make a point to welcome them to the repeaters and club meetings. All ethnic groups and genders are represented. They had a table and setup at Field Day just for the youth group at the GOTA station. They meet each Thurs eve for a net on one of our repeaters. Some are involved in Emergency Communications. We treat all Hams the same, young, old, green or blue. Maybe you live in an area where the converse is true.

So your comments are like --- this cat is green -- so all cats are reen --- too generalized.

And your comment about "Old White men" is racist and stupid, as you too will be old someday. Sooner than you think.

Ask yourself a question "When did I start to hate Old Folks ??"
The ones that Tom Brokaw termed "The Greatest Generation".
The ones who made this country the great nation it is.

You have a tough act to follow and off to bad start -- lets hope in the long run -- you are up to the task of being also a great generation.

End Of SoapBox

When you put it that way, yes. Bu I expect that there will be lots of that taffy pulling, when we have a former President of NCI espousing his terrible proposed changes, while Carl's method would work without making a mess. But the FCC has to weigh both. There will probably be even more proposals as time goes on.

And since many of the statement I've seen from them talk about their desire to remove regulations, I wonder what the final outcome might be. In an extreme (admittedly unlikely) outcome, we may not have to worry about the numbering of the elements. There may be no elements. But I see a possibility of there being only one element after the dust settles.

WOW! We went from an illegal activity to the reason why people are
scared away from Ham radio?

It isn't a very good debate technique, but you have made the best
stretch of an argument I've ever seen.

My hat is off to you!

But, to answer your paragraph, why would anyone take a group of kids to
an amateur club meeting? It's a completely different environment than

they would be comfortable in. And there is usually business to take care of at a meeting that would be mind numbing for kids to listen to, like finances, membership issues, etc. If you really wanted to get them interested, you would get a few amateurs to meet with the kids on the kids turf, like a classroom, the local YMCA, places like that. The kids would be comfortable, only hams who ar interested in public outreach would be involved, and a program could be put together that would keep the kids involved and interactive.

FYI Cindy From FCC URL:

http://wireless.fcc.gov/services/personal/cb/operations/#equipment
You must use an FCC certificated CB transmitter at your CB station. You can identify an FCC certificated transmitter by the certification label placed on it by the manufacturer.

Ah come on Tom -- we all know CB is a legal hobby, but as I read the rules for the Citizen Band --- there is no provision for Packet Radio on the 27 MHz band as Cindy asked.

CB Rules:
[Code of Federal Regulations]
[Title 47, Volume 5]
[Revised as of October 1, 2002]
From the U.S. Government Printing Office via GPO Access
[CITE: 47CFR95.412]

[Page 529-530]

TITLE 47--TELECOMMUNICATION

COMMISSION (CONTINUED)

PART 95--PERSONAL RADIO SERVICES--Table of Contents

Subpart D--Citizens Band (CB) Radio Service

Sec. 95.412 (CB Rule 12) What communications may be transmitted?

(a) You may use your CB station to transmit two-way plain language communications. Two-way plain language communications are communications without codes or coded messages. Operating signals such as ``ten codes'' are not considered codes or coded messages. You may transmit two-way plain language communications only to other CB stations, to units of your own CB station or to authorized government stations on CB frequencies about--
(1) Your personal or business activities or those of members of your immediate family living in your household;
(2) Emergencies (see CB Rule 18, Sec. 95.418);
(3) Traveler assistance (see CB Rule 18, Sec. 95.418); or
(4) Civil defense activities in connection with official tests or drills conducted by, or actual emergencies announced by, the civil defense agency with authority over the area in which your station is located.
(b) You may use your CB station to transmit a tone signal only when the signal is used to make contact or to continue communications. (Examples

[[Page 530]]

of circuits using these signals are tone operated squelch and selective calling circuits.) If the signal is an audible tone, it must last no

longer than 15 seconds at one time. If the signal is a subaudible tone,
it may be transmitted continuously only as long as you are talking.
(c) You may use your CB station to transmit one-way communications
(messages which are not intended to establish communications between two
or more particular CB stations) only for emergency communications,
traveler assistance, brief tests (radio checks) or voice paging.

So I ask you --- where does it say Packet radio is permissable on the CB
band. In fact it sez:
You may use your CB station to transmit two-way plain language
communications. PERIOD

">

> for their proper operation.

Do you think every ham understands how their radios work? Do you think
the tests even begin to measure the things a ham needs to know to
determine if a radio is working properly?

> How could you possibly know something was
> wrong if you had no knowledge of how the radio worked?

By how it behaves. And by how other hams tell you it sounds, or
doesn't sound.
>
> This is an interference control issue ... a technical matter ... and
> knowledge
> of this IS required in order to be competent to operate a station in full
> compliance with the rules.

Do you really think even the Extra test measures that knowledge?
Particularly given the extremely wide range of technologies that a ham
is authorized to use?

Example: New Ham buys old rig, which requires tuning up. Even though
in perfect operating order, said rig can be mistuned by the unknowing
to produce all sorts of spurious responses. Current tests say nothing
about proper method of dipping and loading, grid drive, audio gain,
etc. Heck, most current EEs couldn't get the thing to work without
help.

But FCC trusts that New Ham will seek out a manual, read up, get help
from Old Hams, and be a responsible licensee even though the tests
didn't cover 1% of how his new/old rig works. FCC trusts that New Ham
will educate him/herself on the technology used and not cause
interference. So why should New Ham be forced to jump through a
written test hoop and learn things he/she won't use? Answer: Because
some folks think he/she should have to. And for no other reason.

Sure. But just because FCC says it does not make it true.
>
> > Yet they wouldn't include a sunset clause back in 2000
>
> True ... they didn't include a sunset clause.

Which means they were not 100% convinced. Otherwise why do the whole
thing all over again?
>
> > and they're making all of us go through an NPRM cycle all over again.
>
> How the FCC will handle this is yet to be determined ...

So far it looks like NPRM time. As more and more proposals/petitions
roll in, and old ones remain unresolved, the ARRL forecast of two
years begins to look reasonable.
>
> > If FCC thinks there really is
> > "no regulatory purpose" to a code test, WHY are they dragging their feet
> > and doing the whole circus AGAIN?
>
> See my last sentence ...

We'll see. Not even 2 months since WRC-03, and the summer is not even
over yet. FCC could, upon review of the petitions, say "Yeah, we went
through this 3 years ago, nothing's changed, bye-bye Element 1".
>
> [snipped unrelated discussion of BPL]

Not unrelated at all. But I understand why you snipped it.

I was simply commenting on the apparent illegallity of the sort
of operations that you described ... not something that hams
condone ... and warning you that you might get flamed.
(Note that I was polite ...)

> Which is exacly why young kids are turned off by ham
> radio. I once took a group of young black kids to a

There is simply no excuse for the sort of behavior that
you describe in your last paragraph above ... I can assure
you that it would NOT happen at the local club of which
I am a member.

You *are* correct that there are too many hams who are
not open to, and often disparage, newcomers or "would-be's.
That IS a significant problem in bringing in the newcomers
and, particularly, younger folks who represent the future of

ham radio. On this point we agree 100%.

Dave,

I disagree ... while I would discourage the apparently illegal packet
activity that Cindy described, I am forced by personal observation to
agree substantially with her assessment of how *many* (not all, but
enough to make a negative impact) treat kids and newcomers ...

I think that getting kids involved with local ham clubs is an excellent
idea.
It will socialize them with the older, more experienced hams that can
"elmer" them, show them that there is order and organization, expose
them to programs and activities, etc.

The KEY is finding the RIGHT ham club that will treat the kids the way
they be deserve to be treated as the future of amateur radio, not a club
that will shun and ridicule them as Cindy has described.

The FCC is NOT going to abandon amateur testing ... they can't under
the ITU Radio Regulations ... in fact, there is an ITU Recommenation
on the qualifications of amateurs that is mentioned, though not in a
mandatory

way, in the newly-revised Article 25 ... it's there as "good advice/guidance to administrations" ...

No. Do I think that every ham *should* have at least a basic,
fundmental idea of how their radios work? Hell yes. (that is
my personal view)

> Do you think
> the tests even begin to measure the things a ham needs to know to
> determine if a radio is working properly?

They are certainly a step in the right direction ... but since this is
beyond the NCI Petition's scope and NCI's agenda, I don't
want to debate it in this context ...

[snip of written test related stuff as OT for this thread]

> > > >> 2) Knowledge of morse code can only be measured by a practical

>
> 5 wpm. Which is not "proficient" by any stretch of the imagination.

In your view ... 5 wpm proficiency was what the FCC determined
to be adequate to satisfy its obligations under the *old* ITU Radio
Regs. NOW the ITU Radio Regs don't require any Morse test
at all and the FCC is free to eliminate that unnecessary element that
they have ALREADY determined "does not comport with the purpose
of the ARS" and "serves no regulatory purpose."

> > And that's ALL it is according to

I hate to be the one to tell you this, but it's what the FCC says that
COUNTS.

> > > The Morse test which is Element 1 tests the skill of receiving Morse
code
> > > at a very basic level.
> > >
> > Exactly, it measures a specific level of proficiency.
>
> "Proficiency" starts at 10 wpm.

That's absurd ... proficiency is a relative term that must be quantified.
One can be proficient at a variety of levels in any activity requiring
some sort of acquired skill.

> > > Yet they wouldn't include a sunset clause back in 2000
> > >
> > True ... they didn't include a sunset clause.
>
> Which means they were not 100% convinced.

No, they stated that they would not presuppose the outcome of
a WRC and were uncertain when the matter would be considered
by a WRC ... they did NOT indicate any doubt or "waffling" on their
"does not comport with the purpose of the ARS" and "serves no
regulatory purpose determinations.

> Otherwise why do the whole thing all over again?

It takes time for the government to do anything ... we're still in the
pre-dawn
stages of a regulatory day ... but that doesn't mean it's going to take 2
years
either ...

> > [snipped unrelated discussion of BPL]
>
> Not unrelated at all. But I understand why you snipped it.

BPL is unrelated to the Morse test issue, but I *did* file Reply
Comments on BPL ... in fact, at the risk of being accused of
boasting a bit, I got a very gracious e-mail from someone high
up at ARRL HQ complimenting me on them and thanking me for
corroborating Ed Hare's field test observations ...

> wrong if you had no knowledge of how the radio worked?

I'm responsible for the proper operation of any motor vehicles I
operate, but I'm not required to know how they work. Or pass any exams
on how they work, even to build or repair my own vehicles.
>
> This is an interference control issue ... a technical matter ... and
> knowledge
> of this IS required in order to be competent to operate a station in full
> compliance with the rules.

Motor vehicle operation is a life-and-death public safety issue, and
an environmental issue. It's certainly a technical matter. Yet there
is no exam for technical knowledge of motor vehicle operation. There
IS a skill test, though....

Some states require that vehicles pass periodic inspections - but not
all states. And even in states that have inspection (like
Pennsylvania), a lot can go wrong between inspections. PA inspections
are annual, and a car that was perfectly fine at inspection time can
have all kinds of things go wrong in a year. Tires and brakes wear
out, shocks fail, fluids leak, alignment goes out, etc., etc. Yet PA
DMV trusts us to keep our vehicles in shape even though we are not
tested on how they work.

Most people nowadays don't build their own cars and most hams nowadays
don't build their own rigs.

We might consider the arguments presented in the book "The Art and Skill of Radiotelegraphy". The author had done extensive study on Morse code teaching methods, learning abilities, etc. His definition of proficiency is along the lines of what level must a person obtain to prevent forgetting it. Basically his research showed that those who achieved 13wpm did not forget the code even if they did not use it. They would get "rusty" so to speak and their speed would fall off if they did not use it but they would not forget it. Once they resumed using it, their speed would fairly quickly climb back to their previous level. That would seem like a reasonable definition.

Both are legal but combining packet with CB is NOT legal. Also US law limits CB communications to LOCAL use only although propagation makes it possible to communicate world wide. You are not allowed to make cross country or out of country contacts on CB.

Actually given the fact that we are in the trough of the sunspot cycle, long distance communications on the CB band will be rather rare for the next few years.

Not only that but if the group is larger than two or three, it would be very wise to arrange it with the club in advance so that they can set aside some time from the business meeting to welcome the kids and have material prepared to show them some of the marvels of ham radio. Just springing a batch of kids on the club is not the best way to introduce the kids to the club and vice versa.

This is true in the U.S., but in other parts of the world CB packet is completely legal, and very popular. FBB BBS software was altered about eight or nine years ago to make it usable with CB callsigns, because of that popularity.

There are dozens of European CB packet web-sites... Where have all you guys been the last decade or so?

If it was legal here in the U.S., it would be popular here, too. Personally, I do not see any harm in it, but the law is the law. It can't be done here in the U.S., but we cannot assume that everybody in this newsgroup is in the U.S.. For some of the readers here, CB packet is a legal, legitimate hobby.

The "modernization" that Stewart speaks about... Where is that, I wonder?
Where is that modern "replacement" for packet that I used to keep hearing
about from the TAPR folks? I don't hear much about that particular vapor
system any more, these days. That's a shame, because it was "just around the
corner", waiting on "critical mass" for years and years and years, there...

Still waiting, Stewart? I think most of your buddies have lost patience and
given up.

I responded to anti-ham types on (rec.radio.amateur.digital.misc) who wanted
to move packet radio off of radio and onto the Internet, a stupid idea that
ultimately showed no positive result. I ALWAYS argue with really stupid
ideas like that, Stewart.

To see what real hams who actually use radio are doing digital these days,
see the "Network" page at USPN: http://www.uspacket.net

To see what was accomplished by "hams" such as yourself, Stewart, take a
good long look at a blank sheet of paper. You might as well, because you
sure don't have any network to show.

With the recent upsurge in interest in emergency communications, packet is once again coming into it's own as an integral part of amateur radio. One universal feature among the largest, most sucessful packet radio networks in the U.S. today is that they have studiously ignored TAPR and it's failed paradigm for years. They just go ahead and use packet radio networking to save property and lives, while the TAPR folks remain so out of touch that they will not even admit that those networks exist.

"Packet radio is dead" is TAPR's message to U.S. hams... (See the last TAPR PSR) Again, to see what hams who actually use radio are doing digital these days, see the "Network" page at USPN.

All across the U.S., hams are dusting off old TNC's or buying new ones, starting up new packet networks or upgrading the capabilities of what they have. For several years now, packet has been growing once again here in the U.S., including one network in the northeast that has put up over 140 nodes in just the last few years.

Anybody who thinks packet is "dead" is just plain out of touch. Instead of being all sour-grapey about TAPR's failure, why not celebrate the way that U.S. hams are once again building up a great packet net, Stewart? If you can't beat us, why not join us?

If..... At any rate, I would have the prospective driver change a tire, check their oil, do all kinds of stuff that prove they know something about the vehicle they are driving. There would even be test questions about how an engine works.

I suppose that's hazing, or why should they learn that. They can just call AAA on their cell.

Remind me to tell y'all about the night I darn near froze to death (seriously) waiting for AAA to get me out of a vehicle breakdown. Fortunately, a fellow ham ended up saving my cute butt.

I don't really see where the Vietnamese and the Somalies 'whipped our
arses'. What I remember happening is the US Government WIMPED OUT before
we won. Neither situation was worth a damn. But don't blame the soldiers
for the actions of NIXON, KISSENGER and CLINTON.

Yes, he did, Carl. Man oh man you are paranoid! Even when I note that your ideas are sound, you have to complain! Yes, they *are* his personal opinions, and yes he *is* a former Prez of your organization.

I'm not trying to pick a fight with you, Carl. Just pointing out what people have said and proposed. And though I differ with you on some tings, I have chosen to ignore those differences.

Do you think that you could submit questions to the QPC concerning
those things that a ham needs to know?

And so it degenerates into a Morse Code argument again. Knowledge and
skill in Morse (Farnsworth) will keep your radio working properly.

Well then, it looks like Cindy's just going to have to find something legal to do. If she really likes packet, I'd recommend that she get her ham ticket and participate in the fine amateur packet radio activity that goes on in Florida. They have over 50 SEDAN nodes there if she is into public service and emergency communications, and there is also a great ROSE network there.

Trying to do packet on CB freqs in Florida will just get her in trouble, to no particular purpose.

>
> The KEY is finding the RIGHT ham club that will treat the kids the way
> they be deserve to be treated as the future of amateur radio, not a club
> that will shun and ridicule them as Cindy has described.

I think that the best approach is to get with the kids at a level that they can relate to. And a club meeting is not always the right place. There is business to attend to, and that is a necessary evil which can turn a kid off really quickly. It can turn a lot of other people off also.

In our club, the board tries to do as much business as possible during the separate board meetings. But we still have to bring a surprising number of issues before the membership.

Now that being said, if someone wanted to bring a number of students to a club meeting, we would probably come up with some program to keep them entertained and interactive.

What is interesting to a group of Older folk is probably not going to be interesting to a group of teenagers, save for a narrow overlap.

The other thing I would be interested in knowing is the other side of the story. Did Ms Cindy just show up with the kids in tow? Did the hams, if they knew she was coming, do nothiing special for them? There are enough unanswered questions that I must go on the evidence presented, and that is the illegal packet suggestion, and the odd race related comment. Perhaps Cindy can elaborate.......

I realize that may seem strange to anyone who hasn't been around
radio regulation for as long as a few decades, but the FCC is indeed,
as the final authority, *the* expert agency. And have often been so
considered by various courts when faced with challenges to some of
their actions.

> Larry, you really need to get off the "liberal" nonsense. Your attitudes
>about code are more liberal than most and your attitudes towards others are
>more akin to that of the deep woods redneck than that of a conservative.

Dwight:

As usual, you don't know what you're talking about. Liberals want to have the world handed to them on a silver platter, without having to work to earn their own way. This is the perfect description of the NCTA -- they want full HF privileges, without being bothered to learn a useful communications skill like the Morse code. Therefore, they whine about the code testing requirements, making all their usual strawman arguments about the code being "obsolete" yada, yada, yada, ad nauseum, and they've finally been accommodated by the Liberal Elite at the ARRL and the FCC, who wish not to offend anyone by maintaining anything like traditional, high standards.

> Your desire for government protection of code testing to maintain your
>delusions of status is not unlike the liberal seeking protection for welfare
>state-like government benefits for other situations.

I'm not an anarchist, Dwight. I believe that government has a role in our society, and maintaining standards in the ARS, an activity in which citizens are given the privilege of making use of the valuable and finate resource known as the RF spectrum, makes sense to me. The "government protection" whine is just another NCTA strawman. I prefer to think of it as the government "protecting" the whole ARS, not just the Morse code and it's testing requirement. This is a valid and essential role for the government, but one which will undoubtedly be dropped simply for the convenience of the bureaucrats involved.

> And, if you don't know what a deep woods redneck is (a deep woods redneck
>is not the typical redneck), and how their attitudes are similar to yours,
>watch the movie "Deliverance."

I have been referred to as a "Yankee Redneck," and that is a term which
I feel is probably closer to the truth. Yankees are strong-willed,
independent,
and opinionated people. "Rednecks," of any region, are usually tough,
self-reliant, moral and decent people. Therefore, I'll accept this
description,
while taking exception to the "Deep Woods" angle, since I have all of my
teeth, don't drink homemade corn liquor, and don't have intimate relations
with first cousins. If any of these were true, then I'd be residing in Sussex
County, Delaware, and not Kent County, which is where I live.

Dwight:

As it happens, Ahnold Schwartzenegger may be the best choice to be the next Governor of Cally-Forney-Ah. While he does espouse some political idealogy more in line with liberals than most Republicans would care for, he doesn't see the answer to everything to be raising taxes and expanding government. All the "whacky" candidates are on the ballot simply to grab their 15 minutes; Ahnold (that's MISTER Schwartzenegger to you) actually has a good chance of being elected if Gov. Davis is, in fact, recalled.

Dwight:

Don't look now, but this ENTIRE newsgroup is a place where the code/no-code debate is on-topic, all day, 24/7/365. In each and every thread created, there can, and most likely will, be content related to the code test debate. BTW, I have no problem with the fact that there are people who oppose my position on code testing. What I do have a problem with are people like you who obviously can't handle any kind of disagreement, and want to get people like me to shut up so you can exist in a totally uncomplicated, unchallenged environment. If you don't like it, you know what to do, and watch out for that door!

>is rapidly going the way of the horse & buggy.
>
>Cindy W

Cindy:

My advise to you would be to simply ignore the "old white men."
If you want to get kids involved in amateur radio, I would seek out
some of the younger, more open-minded members of the local
ham radio clubs and ask if they could mentor your group, with
the goal of starting your own radio club geared toward younger
people. This way, they could get started off on the right foot, and
you will not be inhibited by the parochial attitudes you have
experienced in the past.

Keep in mind that once some of these kids get licensed, they
will undoubtedly wish to operate on the local ham repeaters in
your area. It would be a big help if they (the kids) were able to
communicate in good, proper, standard English, without any
"urbanized" speech patterns or language which could cause them
to run into problems being accepted on the air. This is not to
say that their cultural differences cause them to deserve any
kind of negative reaction, just that it would be more helpful to
them in the long run to realize that success in our society
requires them to adopt and adhere to some of the more mainstream
cultural standards. If they are determined to make a point of
their "black" culture in their on-the-air presence, you will definitely
find yourself up against more of the same kind of reaction you
found at the club meeting. However, if these kids are polite,
well-spoken, display proper manners in general and good on-the-air
operating manners in particular, they will most certainly receive
the kind of treatment they expect and deserve.

One more thing -- don't ignore the Morse code. Kids really love it,
and consider the challenge of learning the code and using it to be
interesting and fun. Most of the whining and complaining about
learning the code has traditionally come from middle-aged white
men who simply can't be bothered to learn a useful communications

skill, and just want to pick up a microphone and talk. You and your kids can run rings around these old timers. You're already going in the right direction with your interest in Packet Radio, the thing you need to do now is to get your operation within the limits of what is legal within the Amateur Radio service, and get your kids motivated and involved. You will be amazed at how fast they will learn, if steered in the proper direction. There is nothing about being a particular skin color which affects intelligence, in spite of any "Bell Curve" crapola you may have heard about. These kids will prove this to the world, if only given the proper leadership.

I hate to admit it, but my own loss of respect for the policy,
administrative, and in some regards technical decisions being made
by the top brass of said "expert agency" was one of the reasons that
this "expert" and many others are no longer with said "agency".

My mentor in climbing the legal ladder just hit the retirement
rolls, and a good protege of mine is heading for same at the end of
next month. They feel the same way.

After a while when one plays in manure one can't get rid of the
smell....

Hey, after I retired I was in a meeting of the Wireless Communications Alliance, a Silicon Valley group of technical development and marketing people in the early days of "wireless internet".

The "guest speaker"was an FCC Bureau Chief, who admitted that she didn't know how from where the FCC gets jurisdiction over radio transmissions from a US-registered aircraft "way up in the sky" in international airspace.

I had to teach her basic Communications Act law....

Lest I be accused of being a Republican-basher, it was just as bad in recent years with Democratic appointees and leadership.

>Whoever said the FCC was an "expert agency"???

It is, Dee, it really is, in spite of what we see concerning the
amateur service.

You probably haven't been around here long enough to have caught one
of my occasional rants that the FCC should have been broken into
three agencies because that's how it acts: the politicos who have
no understanding of technological issues, the "scientists" and
"economists" who understand their own specialties but can't relate it
to the real world, and the "real" FCC working troops, the "highway
patrol of the airwaves".

I was in the latter, and it was the other two that I lost respect
for, and eventually the stupid decisions of the other two came to
infect the third.

There are still some good folks left, but they are few and far
between (but at least I know who they are when I have to deal with
them).

They are being considered by two entirely different processors with
entirely different agendas and outside pressures.

BPL will be well briefed to the "Eighth Floor" Commission sanctum
folks by the time that the Commission has to look at it, and the
decisions at the Commission level will be industry-political, not
technological.

Ham testing, OTOH, will be decided at the Division Chief level, two
levels below the Commission, and will be rubber-stamped by the
Bureau Chief (one level below) as well as by the Commission.

That's the real world.

A couple of REALLY old-timer morsemen tell me that even 20 WPM
is kid stuff. REAL proficiency starts at 40 WPM and goes on up.

Don't sweat the technical stuff...morsemanship will do ALL. It is the
magic wand, the talisman of the occult, the ONLY thing needed in
the year 2003 to "make a radio work properly." :-)

Archaic Radiotelegraphy Service

Has a nice ring to it.

All those Brass Pounder Leaguers ought to file and request an NPRM
for just changing the ARS title and drop all written tests, keeping only
a morse test...at 40 WPM, of course.

>the tests even begin to measure the things a ham needs to know to
>determine if a radio is working properly?

The FCC no longer devises the license exam test questions and it no longer requires a minimum number of questions on specific topics within the minimum number of written test questions per class.

Address your complaints about written exam question content to the VEC Question Pool Committee.

>> How could you possibly know something was
>> wrong if you had no knowledge of how the radio worked?
>
>By how it behaves. And by how other hams tell you it sounds, or
>doesn't sound.

HAR! Another reducto ad absurdum commentary! :-)

If (as you said earlier) hams don't have any grasp of technical matters, how can they possibly judge the quality of signals? :-)

Listening to an AM or SSB signal with an FM receiver doesn't yield much information on that AM or SSB signal, does it? How about judging

signal quality of FM on an AM receiver? Does slope detection yield
"quality" of signal that way?

On most modern HF transceivers, the 3rd harmonic has the strongest
content of RF. The 3rd harmonic of 3.5 to 4.0 MHz is 10.5 to 12 MHz
and there aren't many "ham listening frequencies" there, are there?

Hams tend to give "signal reports" as 5-9-9 regardless of actual
lower values...it's the buddy-thing to do to fellow hams, right?

>> This is an interference control issue ... a technical matter ... and

BFD. Did that 50 years ago, not even an EE then. Rather OLD
rigs then, some of them. :-)

>But FCC trusts that New Ham will seek out a manual, read up, get help
>from Old Hams, and be a responsible licensee even though the tests
>didn't cover 1% of how his new/old rig works. FCC trusts that New Ham
>will educate him/herself on the technology used and not cause
>interference. So why should New Ham be forced to jump through a
>written test hoop and learn things he/she won't use? Answer: Because
>some folks think he/she should have to. And for no other reason.

Has the FCC *EVER* stated such a position? I don't think so.

The FCC does NOT specify the various content of written questions
on ANY written element...ONLY the total number.

See VEC QPC......

>on how they work, even to build or repair my own vehicles.

This is a rather absurd comparison. In normal debate it is called by the formal name of "reducto ad absurdum," a Latin phrase meaning it is "reduced to an absurdity."

Perhaps Pennsylvania has very lax driver license examinations, but California and Illinois and Washington all require prospective driver licensees to demonstrate knowledge of basic operating functions of a vehicle...as well as actual operation of that vehicle on the streets.

>> This is an interference control issue ... a technical matter ... and
>> knowledge
>> of this IS required in order to be competent to operate a station in full
>> compliance with the rules.
>
>Motor vehicle operation is a life-and-death public safety issue, and
>an environmental issue. It's certainly a technical matter.

What is "technical" about operating a motor vehicle? Why do you use the term "certainly a technical matter?" It is no more "technical" than operating a CB radio or an amateur radio.

Radios can't carry you over the streets and highways to a physical destination.

>Yet there
>is no exam for technical knowledge of motor vehicle operation. There
>IS a skill test, though....

Make up your mind. You just said that motor vehicle operation CERTAINLY IS A TECHNICAL MATTER. Now you say it is just a "skill test."

>Some states require that vehicles pass periodic inspections - but not
>all states. And even in states that have inspection (like
>Pennsylvania), a lot can go wrong between inspections. PA inspections
>are annual, and a car that was perfectly fine at inspection time can
>have all kinds of things go wrong in a year. Tires and brakes wear
>out, shocks fail, fluids leak, alignment goes out, etc., etc. Yet PA
>DMV trusts us to keep our vehicles in shape even though we are not
>tested on how they work.

...and it's very easy in Pennsylvania to KILL someone using a motor vehicle. Been there, seen that happen.

Now you want everyone to believe that driver's licenses are just like amateur radio licenses?

Whatever it is you are on, you should stop taking it...

The special election in regards to recalling the Governor of the state of
California has nothing whatsoever to do with amateur radio.

If you are not a registered voter in California, then you have no cause to
carry on as if you were nor have you any authority whatsoever on
California politics.

One of the accepted candidates for the ballot in the special election in
California is a Grass Valley resident, Jim Weir. Jim Weir has posted
in here a few times. Ask him if his candidacy has anything to do with
amateur radio policy.

>come again real soon". Sort of folksy and warm if grammatically incorrect.

The term "handle" goes back before 1900 and is attributed mainly to
westerners, particularly cowboys. Etymologically in English, a
general form of handle is something that allows grasping an object.
So, one could "grasp" (understand or know) someone if they gave
you their name...hence, "my handle is Jim" (or whatever name).

Class C and D Citizens Band (the 11m variety) wasn't created until
1958 and the "my handle is..." phrase goes back well over a half
century before that in parts of the USA.

Yes they are the final authority but that does not make them an "expert".
Even a court ruling does not make you an expert. In addition, the courts
are ruling on the legality of the action not necessarily whether the action
is correct in an engineering or technical sense.

It is unacceptable when any person, male or female does NOT know their job.
By the way I am female and have no problem with the "Old Guard" of white
males as you call them. The reason that I don't have a problem is because I
EARNED my job be being sure I was qualified and had the proper training for
it.

It is especially unaccetable that this individual with a law degree did not
know from whence the FCC derived its jurisdiction.

> > I had to teach her basic Communications Act law....
>

Phil Kane has every right to be upset that a person did not know their job. As a female myself, I am offended that this women had a job for which she was not qualified as she may have gotten the job simply because she was female. Such incompetence reflects badly on all women. I broke the so-called and non-existent "Glass Ceiling" decades ago by knowing my field and continueing to stay up to date in that field. When you do that, such ceilings don't exist.

>
The more I look at this thread the more it looks like the 'almost' perfect troll. note that Cindy made one posting to start it to two conflicting groups, one of which is known to be hostile to the discussed activity. She already knew the frequencies, times, other operators, and apparently had enough equipment to monitor said activity, which should have been enough to answer her question without having to post to these groups. And after the first, and surprisingly civil reply, she hopped in with both feet on a totally unrelated topic to attack ham operators and label them not only as judgmental hypocrites, but also as racist old white men... then she disappeared.

If she could have done both with a single message it might have qualified as a perfect troll, but now I can only give it a 9 out of 10 on the troll-o-meter.

Based on the very things Larry says below, I suspect, Cindy, that he is also one of the "old white men." His meaning in the statement above is probably more like, "with the goal of starting your own radio club geared toward those kind of people." Larry's said some very questionable things in the past, although they weren't all that "questionable" to a lot of us. We knew right where he stood.

>
> This way, they could get started off on the right foot, and

>

Yeah, don't you get it, Cindy, the way "they" act is a definite sign of indignance to us white folks. It has nothing to do with the fact that they *ARE* black, you understand.

>
> However, if these kids are polite,
> well-spoken, display proper manners in general and good on-the-air

> the kind of treatment they expect and deserve.
>

Yeah, Cindy. Be sure that you teach these black kids how to say "yes sir" to Larry. They wouldn't, of course, be saying anything like "no sir" because that would not be polite. And, be sure you get that white accent up into them before the ever get on the air--or they won't meet Mastah Larrah's standards of being well-spoken. God forbid that he try to STRETCH HIS HUMANNESS in any way to understand someone ON THEIR OWN TERMS.

>
> One more thing -- don't ignore the Morse code. Kids really love it,
> and consider the challenge of learning the code and using it to be

> interesting and fun.

Yeah, Cindy, and if Mastah Larrah can't tell if they're black, he'll be able to communicate with them. Ya see, Mastah Larrah can only communicate with beeping because as soon as he opens his arrogant, bigoted, cracker-white mouth, people turn their backs on him.

>

> motivated and involved.
>

And remember Cindy, that nothing Mastah Larrah has said YET has anything to do with the R&R of ham radio--only with his own bigoted attitude. Yep, keep those little black folks over theyah on the digital modes, Cindy. Mastah Larrah don't need none 'o that black culture or accent or attitude stuff on HIS ham radio.

>

>

He had to get that one in there, Cindy. You see how antiquated his reference point is. And, that is the world Mastah Larrah lives in. He just doesn't realize that he is a Mastah to nothing.

Kim W5TIT
I apologize that there are people like that, Cindy. You help those kids get on the air, if that's what they want. And let them know that if people can't handle the way they wish to communicate, then that is not their (the kids') problem. When they are on a repeater, or a frequency, it is "theirs" anyway. Besides, I would hope we've gotten beyond the attitudes of folks like Larry enough so that anyone on the air is someone to communicate with.

I used to not take them seriously. However, after I start hearing what is written here repeated outside this newsgroup, it is perhaps time to start taking the stuff written here more seriously. A lot of people, far more than perhaps some imagine, read this newsgroup. Absent an alternative viewpoint, they have no reason not to believe what they read here, and repeat it elsewhere. Enough of this and the entire image of this radio service is dragged down - which is exactly what I think is going on now.

You're right, Dwight. If Riley Hollingsworth's words that he spoke to many groups, many times are correct, then ham radio is dead--or is dying a slow death. I know and have heard the very conversations you speak of. When I first heard talk like that on the air when I got my ticket, I was shocked because I didn't think it was allowed.

There's a repeater here in Dallas. During the last Presidential campaign and election, the hate spewed on that repeater was horrifying--and that is not an overreaction. I heard things like that Democrats were the equivalent of people who "let" things like Hitler happen and, believe me, that is mild. That is why Larry remarks about my callsign--or anyone else's for that matter--are such a damned joke. My callsign has nothing to do with the destruction of the ARS. It is people like Larry and his attitudes that are destroying the ARS. In Larry's mind, it's probably my fault because he has to be so hateful toward me because of my callsign :)

> the Morse code. (snip)

And conservatives want to end big government. More specifically, conservatives want to end unnecessary government rules which exist only to benefit the interests of a certain special interest group. While you and your ilk (a special interest group) have an interest in maintaining code testing to reinforce your self-perceived status, code testing itself is unnecessary today for anything outside that. Therefore, those seeking to end code testing are more compatible with conservative views, while those seeking to maintain code testing to reinforce status are more compatible with liberal views.

> I'm not an anarchist, Dwight. I believe that
> government has a role in our society, and
> maintaining standards in the ARS, an activity
> in which citizens are given the privilege of
> making use of the valuable and finate resource

Well, that's big of you. The question now is which standards (necessary or unnecessary), which you answer in the next few sentences.

> The "government protection" whine is just
> another NCTA strawman. I prefer to think of
> it as the government "protecting" the whole ARS,
> not just the Morse code and it's testing
> requirement. (snip)

Then you support unnecessary government requirements. Code testing serves no real purpose today, either as a means of insuring communications support

to those outside Ham Radio or as a means to keep riff-raft out of Ham Radio (you were able to get in). As such, it exists solely to maintain your own delusions of status and I don't think the government should be maintaining rules just so you can help yourself feel important.

> (snip) "Rednecks," of any region, are usually tough,
> self-reliant, moral and decent people. (snip)

You fail that test in many ways. A redneck doesn't need government rules to be "self-reliant" and your attitudes towards others are certainly not "decent" or "moral." And, based on your old web page pictures, you clearly don't look that tough. So, failing that test, we have to look elsewhere for someone similar to you. And, looking solely at attitudes towards others, only the deep woods redneck springs to mind.

These people (deep woods rednecks) don't like anybody outside kin or clan, and just barely, though not always, tolerate neighbors. Does this sound familiar, Larry? I don't know what you do with your kin, so I won't go there. However, speaking solely of Ham Radio, you don't like anyone outside your pro-code testing clan, and just barely, though not always, tolerate those outside the code testing debate.

Of course, this is only a perception. Since you obviously have a different perception of yourself, we're never going to agree. As such, I'll drop the comparative speculation at this point.

Really? I'm at the FCC often enough to have a permanent
photo ID "Frequent Visitor" badge ...

Have you noticed that the Chairman is a black man?

Did you know that there's a female Commissioner?
(And that she's not the first?)

In fact, I deal on a regular basis, professionally, with many, many
"minorities" and women who hold high positions in the FCC.

How do you propose to reconcile all of this against your statement
above, Nancy???

Well, the FCC isn't going to NAiL you for being only able to do 7WPM
instead of 20
in the extra CW subband (really the extra data subband). Actually, I
think we should
informally keep the novice subbands as beginner Morse code users and
have informally
reserve the extra subbands for people who can do high speed Morse. Used
to be and
likely still is that expert morse men rove the novice subbands looking
to elmer the newbies.

Since when is that a major concern? Read back over this newsgroup. During the last presidential election, several thousand messages were posted on that subject alone. In fact, just about every major event happening in the world recently has been discussed in this newsgroup at some point (and more than a few minor events). The California recall vote is certainly not going to be an exception to that.

> If you are not a registered voter in California,
> then you have no cause to carry on as if you were
> nor have you any authority whatsoever on
> California politics.

Nonsense. What happens in this country, anywhere in this country, is of interest to any American. What happens in California, or any other state, has an impact on the rest of the nation. So, while it is true those outside the state don't vote in California, that clearly doesn't prevent them from commenting on the subject.

Why does that not surprise me one little bit, Larry? Arnold seems to fit right into your concepts of conservatism - liberal on most issues with enough conservative rhetoric to make him the least objectionable candidate. If conservatives aren't willing to vote conservative, no wonder conservative issues are slowly losing ground in this country.

Tell it to Steve. He was the one complained about that, not me.

> What I do have a problem with are people like
> you who obviously can't handle any kind of
> disagreement (snip)

First, there isn't any real disagreement - only your endless rhetoric about a subject (code testing) that is quickly dying. Second, I have no problems with a simple disagreement, just a problem with those who don't know how to disagree in a civilized manner. You, Larry, either never knew how to disagree in a civilized manner or have lost sight of that ability.

Dan, as I recall, Nixon didn't open up Vietnam, and Clinton didn't
open up Somalia. I don't think Kissinger had much to do with either.
But he did figure out how to get OPEC organized, have an oil embargo,
then jack up the price of oil so they could buy US armaments.

Why?

The author had done extensive study on Morse code
> teaching methods, learning abilities, etc.

Cool. Who is the author, what is his callsign? And what is the
copyright date?

I'll bet he wrote it long after the code began to wane in any (every)
radio service.

His definition of proficiency is
> along the lines of what level must a person obtain to prevent forgetting it.
> Basically his research showed that those who achieved 13wpm did not forget
> the code even if they did not use it. They would get "rusty" so to speak

> climb back to their previous level. That would seem like a reasonable
> definition.
>
> Dee D. Flint, N8UZE

Dee, you might want to suggest this as the definition of "Morse
Proficiency" to the FCC.

You might also want them to define Morse Code as it has some how
slipped out of Title 47. Hey, while they're at it, ask them to define
how to compute "Words per Minute," and Farnsworth.

1932. This NG -- The Good, The Bad, And The Ugly

"Master of the universe and supreme ruler of all living beings (and I have permission to be so from ny wife)" <john.smith@micro$oft.com> WROTE:
> Traditionally radio amateurs with more experience would help those with
> less. No ridicule. No begging. No temper tantrums.
> So what has happened? Or is it just this british newgroup?
> BR MOTU

Nope -- the NG's over here in the USA have also been invaded with the lawless, the renegades, the profane, the angry, with numerous personal attacks, political agendas, condescending attacks on lower license Hams, and incredible Off Topic junk. Some just keep beating up on their adversaries over and over again for YEARS -- wish they would just quit it and send personal e-mail. But guess they want the world to see their sputterings.

When a forum is free and unmoderated -- the 0.0001 % junkies of the world invade it. Fortunately mostly -- the subject tells the content -- so just ignore those posts. But in all news groups -- some people keep a subject such as VSWR and change the content so it has nothing to do with VSWR.

OH well it is free and some good stuff comes out of it all.

If you read the NG's for a while -- you will know who the 0.0001% are -- and you can filter em out or just plain ignore them.

Unfortunately, many of the 99.9999% of the decent hams don't bother with the NG's

So on NG's -- here you will find the Good, the Bad, and the Ugly.

This ought to stir up a hornets nest from the Bad and Ugly -- flame away chaps.

In article <3F4795AF.1040907@ix.netcom.com>, Robert Casey
<wa2ise@ix.netcom.com> writes:

>>>>
>>>Do you think every ham understands how their radios work?
>>
>> Few do.
>>
>At what level of expertise do you need here? Simple concepts on how
>superheterodynes
>work (block level diagrams) or precise knowledge on RF analog chip design?

My take on the general level of expertise can be reduced to:

"A transmitter sends out signals and a receiver receives them."

:-)

Or, when questioned on something more specific, the pointing to a large
stack of old QSTs and some Handbooks, "I got all the techie smarts I
need right THERE, I took my TEST long ago and don't have to learn
nuthin!"

>>>Do you think
>>>the tests even begin to measure the things a ham needs to know to
>>>determine if a radio is working properly?
>>>
>> The FCC no longer devises the license exam test questions and it no
>> longer requires a minimum number of questions on specific topics within
>> the minimum number of written test questions per class.
>>
>> Address your complaints about written exam question content to the
>> VEC Question Pool Committee.
>>
>At least enough knowledge to spot gross problems.

"Gross problems?"

Address bitching about "today's technical test dumbing-down" to the
VEC QPC.

Meanwhile, continue to operate solely in the ham bands (on HF, there
are no other real ham bands) and forget about interfering with any other
radio services. That's not a "ham problem" anyway, is it?

>>>>How could you possibly know something was
>>>>wrong if you had no knowledge of how the radio worked?

>>>>
>>>By how it behaves. And by how other hams tell you it sounds, or

>> signal quality of FM on an AM receiver? Does slope detection yield
>> "quality" of signal that way?
>>
>Come on, few hams are that stupid.

I've met some. A few of those were morsemen, too! :-)

>First thing I check is to see that I have the right receive
>mode enabled. "Oh, I had LSB enabled for 20 meters, no wonder everyone
>sounded screwed up".

Nu?

My hearing is not special but it is absurdly easy to spot a wrong-sideband
SSB receive mode by EAR, not having to check any panel controls...

>> On most modern HF transceivers, the 3rd harmonic has the strongest
>> content of RF. The 3rd harmonic of 3.5 to 4.0 MHz is 10.5 to 12 MHz
>> and there aren't many "ham listening frequencies" there, are there?
>>
>More than the fundamental?

Of the HARMONICS, the 3rd is MOST LIKELY to be the strongest
HARMONIC.

Don't try to get into nit-picky arguments over parts of sentences.

The third harmonic of 3.5 to 4.0 MHz transmissions doesn't fall into any
"ham bands" on HF so it is extremely unlikely that any other amateur
would have any listening capability in that part of HF.

>Modern radios rarely have a failure in this
>that is not obvious in other areas of performance.

That's a very nice blanket statement which is so much phlogiston, a
perfect rationale to absolve oneself from any need to know anything
technical. From experience in lots of "modern radios" designed and
built for far harsher environments than amateur radio, that's BUNK.

The Mean Time Between Failures (MTBF) of "modern radios" is FAR
BETTER now than at any time in the past, especially after the solid-
state era was entered. A couple of orders of magnitude BETTER.

"Modern radios" just haven't reached the perfection level yet.

>> Hams tend to give "signal reports" as 5-9-9 regardless of actual
>> lower values...it's the buddy-thing to do to fellow hams, right?
>>
>"Everyone is "59" on my meter..." :-)

Of course. Every ham signal is always perfect everywhere. Uh huh.

>>>Do you really think even the Extra test measures that knowledge?
>>>Particularly given the extremely wide range of technologies that a ham
>>>is authorized to use?
>>>
>We do put some faith in the quality of our manufactured equipment. Like if
the
>harmonics are really down 60 dB or if our rigs are leaking harmonics only 55
dB
>down. But we should be able to spot a gross deficency (like something broke).
>Not necessairly be able to repair it ourselves, but be able to spot the
problem and
>take the bad equipment out of service.

Not a problem. Just read the QST Equipment Reviews and BELIEVE them.
Don't bother with trying to measure anything yourself. Forget theory,
forget
having to learn anything, forget it all, just adjust those paddles and beep
away. Equipment Reviews wouldn't LIE to anyone, would they? After all,
HAMS did the testing, right? If specifications are printed on real paper
with
real ink, they are absolutely withoutadoubt "honest" and faithful to all
hams.

Do ALL the "technical discussions about performance" based on SOMEONE
ELSE's measurements. Argue the fine points of what SOMEONE ELSE
wrote. Never challenge any specifications printed on real paper with real
ink...if a ham did it, it is beyond criticsm. There's no point in doing it
yourself unless you have all the "credentials" and have been a ham for
decades...NOT doing a lot except USING the radios.

If you swiped a credit card for $2000 or so for an all-mode, all-everything
super-special, esthetically-gorgeous, ham whiz-bang, do NOT question
ANY of the manufacturer's specifications. Accept it on FAITH. You "got
what you paid for," right?

>> Hello? Want to improve written test content and quality? Go talk
>> at the VEC QPC and bitch at them...

No arguments on that? :-)

>>>Example: New Ham buys old rig, which requires tuning up. Even though
>>>in perfect operating order, said rig can be mistuned by the unknowing
>>>to produce all sorts of spurious responses. Current tests say nothing
>>>about proper method of dipping and loading, grid drive, audio gain,
>>>etc. Heck, most current EEs couldn't get the thing to work without

>>>help.
>>
>> BFD. Did that 50 years ago, not even an EE then. Rather OLD
>> rigs then, some of them. :-)
>>
>Issue is a new ham trying to use the old rig as "plug and play" like a
>new rig. He has to RTFM.

Nope. All that is necessary is skill and proficiency at morse code.
And being able to subtly tune in a signal in ways that professionals
couldn't possibly do.

>>>didn't cover 1% of how his new/old rig works. FCC trusts that New Ham
>>>will educate him/herself on the technology used and not cause
>>>interference. So why should New Ham be forced to jump through a
>>>written test hoop and learn things he/she won't use? Answer: Because
>>>some folks think he/she should have to. And for no other reason.
>>
>> Has the FCC *EVER* stated such a position? I don't think so.
>>
>> The FCC does NOT specify the various content of written questions
>> on ANY written element...ONLY the total number.
>>
>> See VEC QPC......
>>
>I think the FCC does has some specifications on the material to be
>tested.

The FCC specifies the number of questions on every written test
element. Beyond that the ENTIRETY of the written test questions
and answers is left solely up to the VEC QPC.

The FCC has "final cut" on the written elements (final approval) but
that is rather pro forma.

>And on the quality
>of the wrong answers on a multiple choice test. You can't ask "the
>voltage across a 1 ohm
>resistor at 1 amp is: a) bananas, b) New Jersey c) 1 volt d) a can of beer."

Complain to the VEC QPC if you have a problem with that.

>>>Sure. But just because FCC says it does not make it true.
>>
>The FCC does the licenses, and they decide what they care about in
>deciding if an applicant gets a license or not.

No kidding?!? :-)

The FCC hasn't "cared much" anywhichway since the small but slight
change in Part 97 a few years ago when the VEC QPC got the WHOLE
magilla on written element questions and answers.

>>>"Proficiency" starts at 10 wpm.
>>>
>Well, the tests are done "Farnsworth" style, ie, fast code characters spaced
at 5 WPM
>rate. Idea is to get people to learn the sounds of the characters instead of
thinking of
>the dits and dahs and deducing the character. Less time wasted getting
proficient at
>code if one chooses to.

There you have it...MORSEMANSHIP is the MOST IMPORTANT factor in
amateur radio operations below 30 MHz!!!

According to some, anyway...

>> You can bet your NAL that what the FCC is *TRUE* is very much true
>> if you get NAiLed.
>>
>Well, the FCC isn't going to NAiL you for being only able to do 7WPM instead
of 20
>in the extra CW subband (really the extra data subband). Actually, I think we
should
>informally keep the novice subbands as beginner Morse code users and have
informally
>reserve the extra subbands for people who can do high speed Morse. Used to be
and
>likely still is that expert morse men rove the novice subbands looking to
elmer the newbies.

Morsemanship uber alles in the year 2003!

There are NO "novice class" amateur radio licenses issued in
USA amateur radio. Are you going to keep space on a
"reservation" for all those missing indians or what?

How about we keep all those Morsemen Chiefs on their elite little
EM spectrum reservations, maybe have dude ranches where
youngsters can all attend to learn the Old Ways of Morse?

All those old Morse Chiefs have been giving us "lip" on their
morsemanship, now we can give them "lip service" by keeping
them all on their EM reservations. Everyone can be happy, the
Chiefs can brag up a storm, recite the old Maxims, and keep the
religion of morse alive in their peyote-fueled fantasies about radio.

>>>We'll see. Not even 2 months since WRC-03, and the summer is not even
>>>over yet. FCC could, upon review of the petitions, say "Yeah, we went
>>>through this 3 years ago, nothing's changed, bye-bye Element 1".
>>
>> The FCC hasn't said that yet. Or do you have "insider information" that
>> even Phil K. doesn't have?
>>
>Takes time for the brearucracy to turn its wheels. You think ham radio issues
like this

>are at the top of the FCC's list of burning issues? I doubt it.

I'm not worried. It took TWENTY-FOUR YEARS to make a
dent in the "40m problem" and that isn't resolved yet.

All those Morse Chiefs are big and important...mouth-wise. They've
beeped for so long that they won't hesitate to send smoke signals
to the Great (Black and) White Father in Washington to Keep The
Morse Faith. [the Forestry Service may have to send tanker planes
to help control all the smoke and fire...]

All should strive to protect and serve the standards and practices of
the 1930s' radio in this new millennium. Keep the morse faith.

beep, beep

LHA

> >
> At what level of expertise do you need here? Simple concepts on how
> superheterodynes work (block level diagrams) or precise knowledge
> on RF analog chip design?

My *personal* view is that the former (basic block diagram level
understanding)
should be the minimum. More detailed knowledge is something that folks can
and should, ideally, strive for ... however, RF chip design is an area for
the pros
... hams can't fab RF chips in their workshops ... BUT, they CAN "fab" all
sorts
of interesting things with FPGAs and other programmable logic devices - with
affordable "eval" boards and inexpensive (sometimes free) software.

A few years ago (at work, I admit, but I could just as easily have done it
at home, as I have the tools) I designed an all-digital (I mean nothing but
gates) modem for orthogonal BFSK that performs within 1.2 dB of
theoretical ideal, yet was coded in VHDL and synthesized into an FPGA
for the proof of concept model. While the VHDL was later re-targeted
into a custom ASIC along with some other stuff, the cost of an FPGA that
would be more than capable has come down to the point where home
experimenters and "cottage industry shops" catering to the amateur market
(which is, comparatively, a "niche market") could use this method of
producing all sorts of useful stuff.

So, to sumarize, my *personal* view is that block diagram understanding
is a minimum "entry level". More than that is "a good thing" and should
be a goal. Not every ham is going to be/can be an RF engineer, nor do
they need to be, but the overall average level of technical knowledge
could, in my *personal* opinion, be increased if ham radio was focused
a *bit* more on the radio/electronics and a bit less on "operating,"

What about all of us "extra-lite" licensees? We only need 5wpm
nowadays, and if
I want to QSO Larry, I would want to have some skill. Besides I said
"informally"
so if nobody's on at the current time, other hams can fire up other
modes on the
empty frequencies.

>

I like item 32:

Make sure when you reply to a usenet post that you don't quote the entire
message, as you are wasting everyones time. Assuming of course they are
smart enough to look at the previous post.

Of course they didn't OPEN UP VN or Somalia. I was refering to who ENDED it
and HOW. As for Kissinger he was a MAJOR part of how we wimped out to the
North Vietnamese, allowed them to keep troops in the South while we turned

tail and let the South Vietnamese swing at the end of the rope we tied.

No arguement of Mr. K. and his deals later on.

Well put.....don't forget Mrs. LBJ and her interest in Bell Hellicopters and
of course the 'construction company'.

Actually tho if one wants to be technical. Nixon is partly responsible
also. He was the VP when Ike sent in the first 'advisors'. But thats a
bit of a stretch.

Sorry Ronny, you are confused. I never said I was sending it to Riley.

I said I was sending it to the FCC.

Oh and BTW you don't think enforcement cares or can catch anyone of you packet racket fools? Ask the guy in Miami how much his equipment cost that was taken by the Federal Marshalls a few years back.

Caught up to him right in the middle of that packet burst to the Frency BBS.

You people are idiots. Why don't you just get your 'hammie' license and do it legal? Miss the thrill of never knowing when there will be a knock on the door?

Im right...you people are IDIOTS.

Well said Larry. As I was reading your comments I was thinking over the years I have known 'black' operators on ham radio. And you know what? I can't think of but 1 that acted like a jerk. He is long gone now.

Check out the OMISS group. They have been around for decades. And are good examples of what you were talking about.

We had a guy here in the South. His name was John. He always was mobile and we called him 'mobile John'. He was black. And welcomed wherever he went. A fine gentleman and a great amateur operator.

Cindy,

I would like to apologize to you for Kim. As you can see by her callsign, she is somewhat, shall we say...disturbed?

She and Larry don't get along very well. And Twit....er Tit, er Kim seems to think what he says is directed at her ALL THE TIME.

She is in need of a couch and a cold towel.

Have a good day.

So what?? At one time or another the entire USENET is one big TROLL...so
what ?

It brings up interesting conversation. What else is there to discuss? The
wx, the rig. If you don't like reading it, and you consider it a
troll...don't.

I think you missed the point, Dee. FCC is the expert agency simply
because they are the final authority, or the final authority has
deferred to tnem as the expert agency. Nobody said they're right. See
N2EY's recent post on the subject.

Wrong. She was a "I have no clue as to her party and care less" in
a Democratic administration.

Wrong on two of the three. She was not a Harvard Law grad, she did
not have ANY technical education or degrees. She was not a member
of the "Old Guard" of white males because God made her female and
she did come from "outside" and therefore didn't know what she was
'sposed to if she held that position nor did she bother to learn.
She was more interested in establishing cell networks and auctioning
off spectrum.

>> I had to teach her basic Communications Act law....
>
> Sounds like you are bitter that women had broken

I am bitter that someone is appointed a Bureau Chief who is
ignorant in the basic jurisdiction and authority of the agency.

One of the people I worked with and for at the agency whom I
respected the most was a "minority" lady - a "lady" in every sense
of the word - who came from "outside" and learned comm law very
quickly. She passed through the non-existent "glass ceiling" at the
agency very rapidly, served several years at a high position inm the
agency, and today holds a very high non-political career position in
another Federal agency, which she certainly EARNED.

'Bye "Harry".....

The first (Frieda Hennock) served about 45 years ago, IIRC. Since
that time, it was rare that one of the Commissioners wasn't a woman.

>In fact, I deal on a regular basis, professionally, with many, many
>"minorities" and women who hold high positions in the FCC.

And I worked for and greatly respected several of the same..... and
my "deputy" throughout all the years was a first-generation "minority",
(sorry, Nancy, God made him male) and one of the sharpest FCC engineers
is a Vietnamese refuge who at age 11 escaped being sunk by pirates when
his family fled Vietnam for America.

So much for generalities.

>How do you propose to reconcile all of this against your statement
>above, Nancy???

Yup.....

> ***The below space is reserved for Phil to bad
> mouth Reed Hundt***

Reed Hundt didn't have the first clue on what communication law was, is, or should be, as evidenced by how he raped the Field Operations Bureau - the only hope that the agency had in preserving regulatory compliance enforcement - while building up a very ineffective Cable Bureau mired in words and theories that amounted to political mumbo-jumbo. His field prior to coming to the Commission was anti-trust and his appointment by Clinton had all the earmarks of redemption of some political IOU.

He was, and is, all politics, as has been every chairman since Mad Man Mark Fowler, certainly up to and including the present one. His "internationally recognized authority" status and value as a partner in his Chicago big-fee law firm is in the political and industry contacts that he can make, not in knowledge of or insight into what proper communications regulatory law should be. The monitoring techs that he RIFfed (with the exception of one particular one) know more about the realities of communication regulatory compliance than he did.

And that's my personal opinion based on being there......

Oh my, look everyone, little Phil is really angwy now!
Mean ole Mr Hundt has really gotten Phil's dander up.
Errrrr, say Phil, where is YOUR web page & where are
any books you have authored???? Huh?
Mr Hundt is an accomplished & successful author.
Here's his web page, take a look. Mr Hundt has grown
in stature since leaving the commission. A fine gentleman
indeed! Perhaps he got tired of rolling around in the
filth of the FCC.
www.reedhundt.com

For most modulated sine waves, the 3rd harmonic is usually the strongest
harmonic although it depends upon several factors. Generally, the odd
harmonic components add and the negative components subtract with modulated
sine waves. Having said that, most modern rigs that produce FCC quality
signals will filter such harmonics several 10's of dB rendering reception
almost impossible except in the near field. I thought I needed to correct
this BS, that emanates from someone who claims to understand modern amateur
technology theory. Hams transmitting signals of any significance on 12MHz
will not be hams for long.

If there is *one* such ham, that is too many, but you seem to suggest that the problem is widespread. On that notion we disagree 100%.

For every curmudgeon who disparages newcomers there are thousands who actively welcome them. Check out www.mnyarc.org. It was formed by members of our club, originally as a club sponsored Explorer Post, and has grown into a standalone group fully dedicated to nurturing youth-oriented amateur radio in our area. Hamfest Minnesota, also sponsored by our club, has a policy of free admission to hams aged 17 and under. These are just a couple of examples right in my neighborhood. Maybe you just live in a bad neighborhood.

Since I've given the title of the book, surely you can do the research
yourself for that data. Hint, it's available as a free download off the
internet so you can find it with any search engine. However the fourth
edition is copyrighted 2003 and is by William G. Pierpont, N0HFF.

The FCC can define it anyway they like for their regulatory activities. The author's definition is one that works in the real world, i.e. the point at which the person is at little risk of forgetting the training.

You would think these people would know better. This type of endless negative rhetoric from members would bring down any organization, from the local church group to the worse prison gang. Even if one doesn't agree with that premise, most would agree it certainly doesn't help or improve anything. If people care about Ham Radio, they need to start speaking out against some of the most destructive behavior. Debate is fine, but there is a huge difference between honest debate and hateful rhetoric. I think even Larry knows he has stepped over that line.

There are plenty of OTHER newsgroups for political arguments, Dwight.

Neither morse code nor amateur radio is on the special election concerning recall of the elected Governor of California.

This newsgroup is about AMATEUR RADIO POLICY.

>Read back over this newsgroup. During
>the last presidential election, several thousand messages were posted on
>that subject alone.

Oh, my, that makes it "right," does it? I don't think so...

>In fact, just about every major event happening in the

>than a few minor events). The California recall vote is certainly not going
>to be an exception to that.

"Dissed," not discussed, Dwight.

There's been a whole lot of spleen-venting by a lot of ignorant keyboard rattlers concerning "world geopolitics," all done by those who don't have a good clue as to what they are about.

>> If you are not a registered voter in California,
>> then you have no cause to carry on as if you were
>> nor have you any authority whatsoever on
>> California politics.
>
> Nonsense. What happens in this country, anywhere in this country, is of
>interest to any American. What happens in California, or any other state,
>has an impact on the rest of the nation.

Nonsense...to the easterners who never considered California as ever belonging to the union. :-)

There's NO amateur radio in the special recall election in California.

>So, while it is true those outside
>the state don't vote in California, that clearly doesn't prevent them from
>commenting on the subject.

I'm aware. :-)

I'm also aware of the provincial bigotry of easterners and enviousness
of the most populous state in the USA (about 1 in 8 Americans live
here) and the fact that California's budget ranks 5th through 7th
(depending on standards) of world NATIONS.

Just the same, there is NOTHING about amateur radio in the special
recall election in California. Nothing.

Go bitch about something non-amateur elsewhere...

Hans,

I have seen/heard it from SoCal to Florida to New England ...
over many years ...

However, I did not intend to imply that all/most/a large majority
of hams are that way ... just WAY too many are (although we
agree that even *one* is "too many," my experience is that there
are a LOT more than that ...

Perhaps folks are just friendlier overall up in your neck of
the woods?

Actually, Riley has stated that not following a local gentleman's agreement band plan was poor amateur practice and is enforceable. So items not specifically spelled out in the regulations may be enforceable depending who's at the FCC on any particular day.

I think we can introduce questions to the QPC about the Amateur's Code.

Dee, wow, that's great. I love these little trips down memory lane.
And to hell with the FCC and their role in regulating amateur radio.
They don't define Morse Code but should, they don't define WPM rate
but should, then they require a pass/fail Morse Exam that excludes
otherwise qualified citizens from access to HF radio. And the VEC's
substitute a Farnsworth Exam where Morse is specified.

Letting the FCC define something "any way they" want is a recipe for
disaster.

But we like THIS one ya Putz. So we'll continue to post whatever we
want to post. Right here. Any time. No matter what. Particularly no
matter what you post.

> Neither morse code nor amateur radio is on the special election
> concerning recall of the elected Governor of California.
>
> This newsgroup is about AMATEUR RADIO POLICY.

Ya mean like your endless megabytes of snoozer posts about your '50s
Army RTTY crap have been about HAM RADIO POLICY Putz? Or how 'bout we
get into how your complete lack of credentials in ham radio
"qualifies" you to spout off about ham radio policy?

> >Read back over this newsgroup. During
> >the last presidential election, several thousand messages were posted on
> >that subject alone.
>
> Oh, my, that makes it "right," does it? I don't think so...

The cold hard nut of the matter is that nobody gives a rat's ass what
you think is "right" or "wrong". In fact that's an oxymoron in itself.
You're just an outsider around here Putz.

> >In fact, just about every major event happening in the
> >world recently has been discussed in this newsgroup at some point (and more
> >than a few minor events). The California recall vote is certainly not going
> >to be an exception to that.
>
> "Dissed," not discussed, Dwight.

It's neither Putz, it's just entertaining as hell. As in one more
unlimited source of La-la Land guffaws n' giggles. It's kinda grim
elsewhere, we all need a bit of comic relief so La-la Land comes up
with another one. Quite timely actually.

> There's been a whole lot of spleen-venting by a lot of ignorant keyboard
> rattlers concerning "world geopolitics," all done by those who don't have
> a good clue as to what they are about.

And of course you do know, you're the Henry KIssingeer & Colin Powell
of RRAP. More humor from La-la Land.

> >> If you are not a registered voter in California,
> >> then you have no cause to carry on as if you were

> Nonsense...to the easterners who never considered California as ever
> belonging to the union. :-)

For damned good reasons too, and you're a good illustration.

Every country has pulled one monumental blooper of another. Swiping
La-la Land from the Mexicans was one of ours. I vote we give it back.
I think there are others who will agree.

> There's NO amateur radio in the special recall election in California.

Jim Weir gave up his ham license did he ya PUTZ?

> >So, while it is true those outside
> >the state don't vote in California, that clearly doesn't prevent them from

>
> I'm aware. :-)
>
> I'm also aware of the provincial bigotry of easterners and enviousness

Bwaaahaha! No further comment req'd!

> of the most populous state in the USA (about 1 in 8 Americans live
> here) and the fact that California's budget ranks 5th through 7th
> (depending on standards) of world NATIONS.

It's also been established that around one out of eight in any
generalized population is a kook. Lotta ramifications in that with
respect to La-la Land and YOU, ya PUTZ.

> Just the same, there is NOTHING about amateur radio in the special
> recall election in California. Nothing.
>

> Go bitch about something non-amateur elsewhere...

Since you're not a ham why don't you follow you own "instructions" and take your bitching about HAM RADIO POLICY somewhere else?

Hey Putz, you're missing a golden opportunity to exercise your all-encompassing skills, experience and expertise on EVERYTHING. You need to climb aboard one of the candidate's campaign organizations and do your do. I'm thinking you'd be the perfect public relations spinmeister for the Midget & Bimbo slate. You'd fit.

> communications before he was born. He just doesn't know.

Sure he does. Someone here has a hard time "accepting" things,
Lennie, and it isn't me.

> Steamy never did any communications while in the military...other than
> talking on the telephone.

Sorry. Incorrect.

> It's painfully obvious, Brian. Steamy hates me. I served in the US Army
> so, naturally to him, anything Army is subject to hatred, villification, and
> denigration.

I ahte liars and people who try to use somoen else's military
service to make themselves look good. That would include you and Mark
Morgan.

> Steamy never did any primary communications while in the USMC. Naturally
> he resents that anyone else did.

Sorry. Incorrect.

> Steamy can only think of the hymnal about Montezuma and Tripoli.
>
> Steamy is a mighty macho marine morseman, far superior to ordinary
> folk. He is a regular Atilla the Ham.

Thanks for once again re-proving that "Do As I Say Not Do As I
Do" is a persnal credo of yours, Lennie.

> Steamy can't handle real truth.

Sure I can. You are liar, an antagonist, and a creep.

See...I took that pretty well, I think.

>> Many of my fellow Marines have fallen in combat. That is true.
I
> >> honor them and wish they never had to be called upon to make that

> >> sacrifice, but they did.
> >
> >And I would assume that some have fallen since your departure as well.

And what give YOU the right, Mr. Anderscum, to demand that Dwight
make the content conform to YOUR specifications?

You, you lying sack of buffalo excrement, are the one who is
constantly calling Dave Heil and Larry Roll all sorts of names for
allegedly doing the same thing, yet here YOU are VERY obviously NOT
living up to your own rhetoric...

Again...

> Go bitch about something non-amateur elsewhere...

THAT was inspiring, Lennie. Why is it alright for YOU to make
such demands, yet you'll rant on for days if anyone else even hints
that YOU should get lost...NON-licensed pogue that you are...?!?!

Usual lying, deceitful, "Do As I Say Not Do As I Do" rhetoric
from the Putzmaster Himself.

> Dee, wow, that's great. I love these little trips down memory lane.
> And to hell with the FCC and their role in regulating amateur radio.

You are misconstruing what I said. My objective was to demonstrate that
there has been some research that would allow a rational definition of the
word "proficient" in terms of actually using Morse code. It was not to
encourage people to ignore the FCC and their role.

> They don't define Morse Code but should, they don't define WPM rate
> but should, then they require a pass/fail Morse Exam that excludes
> otherwise qualified citizens from access to HF radio. And the VEC's
> substitute a Farnsworth Exam where Morse is specified.
>

The exam does not exclude anyone who cares to make the effort to learn. And
Farnsworth IS Morse since it relates a letter directly to a sound without
counting dots and dashes. Farnsworth is a method of teaching and learning
Morse that actually helps a person to reach a useable level of ability.

Methods that allow the student to count the dots and dashes (i.e. slow letters) or use "sound alikes" or visual pictures all lead to limiting the student to a low level of achievement. The student must then struggle to break the resulting barrier (usually occuring at about the 10wpm level) often having to "start over" at a higher character speed to do so.

"The Art and Skill of Radiotelegraphy" has a very thorough discussion of why barriers sometimes occur at certain speeds. The book is geared towards those who want to use the mode rather than those whose goal is passing the test.

> Letting the FCC define something "any way they" want is a recipe for
> disaster.

Again you miscontrued what I wrote. I did not say they should be allowed to define something anyway they want. I said they had the ability to define it the way they want. There is a tremendous difference between the two.

Let me state clearly that I was not trying to define what the regulation should be. I was pointing out a possible basis for hams themselves to use as a mimimum proficiency level.

Kim:

Mr. Riley Hollingsworth seems to disagree with you. Have you forgotten
that he said that your call sign has the potential to take the ARS
"...one step closer to extinction"?

> It is people like Larry and his attitudes that are
>destroying the ARS.

I don't see how that's possible, Kim. After all, I'm not the one who
is sporting a callsign which is shamefully demeaning to women in
general, and YL hams in particular. However, you are -- and even
Riley Hollingsworth has said so, and I can't think of anyone who is
more qualified to make that judgment than he is!

>In Larry's mind, it's probably my fault because he has
>to be so hateful toward me because of my callsign :)

It's not hate, Kim. It's concern. Concern for the negative image of
the ARS that you are projecting through the selection of your
callsign, which places amateur radio operators, and particularly YL
hams, in a negative light. If anyone is being "hateful," it is you --
and you are showing this hate toward your fellow hams by demonstrating
a blatant lack of respect for the image of the service.

>commenting on the subject.

Dwight:

You've finally said something that makes sense. California politics are very important to people in every part of the United States, and the world. If all the 50 states were ranked economically along with every other nation in the world, California's economy would be the fourth largest! Over half of the jobs lost in the U.S. in recent years have been lost within the state of California! California politics are of vital interest to every American.

>> not just the Morse code and it's testing
>> requirement. (snip)

> Then you support unnecessary government requirements.

No, I don't. However, I don't consider the code testing requirement to be "unnecessary." I consider this requirement to be current, valid, and essential to maintaining the use of this valuable communications skill within the ARS.

>Code testing serves no real purpose today,

Prove it…

>either as a means of insuring communications support
>to those outside Ham Radio

…starting with this…

>or as a means to keep riff-raft out of Ham Radio
>(you were able to get in).

Where have I ever said that it has this effect? I have repeatedly disclaimed this particular theory, usually citing the 20-WPM Extra-class HF Phone reprobates who collect virtually 100% of the NAL's issued to amateur radio operators.

>As such, it exists solely to maintain your own
>delusions of status and I don't think the government should be maintaining
>rules just so you can help yourself feel important.

No, Dwight, that's just your own twisted and, quite frankly, slanderous opinion.

>> (snip) "Rednecks," of any region, are usually tough,
>> self-reliant, moral and decent people. (snip)

> You fail that test in many ways. A redneck doesn't need government rules
>to be "self-reliant" and your attitudes towards others are certainly not
>"decent" or "moral."

If that's how you perceive me, then you're obviously no judge of character.

>And, based on your old web page pictures, you clearly
>don't look that tough.

And just what is that supposed to mean? It looks like you're making the classic mistake of judging a book by it's cover.

>So, failing that test, we have to look elsewhere for
>someone similar to you. And, looking solely at attitudes towards others,
>only the deep woods redneck springs to mind.

Well, I guess you're entitled to your opinion, groundless though it may be.

> These people (deep woods rednecks) don't like anybody outside kin or clan,
>and just barely, though not always, tolerate neighbors.

I haven't had any complaints.

>Does this sound
>familiar, Larry? I don't know what you do with your kin, so I won't go
>there. However, speaking solely of Ham Radio, you don't like anyone outside
>your pro-code testing clan, and just barely, though not always, tolerate
>those outside the code testing debate.

Dwight, you're digging yourself into a deep hole of scurrilous, groundless ad hominem attacks -- something that I've been accused of in the past.

> Of course, this is only a perception.

And, I might add, not a very well-considered one at that.

>Since you obviously have a different
>perception of yourself, we're never going to agree. As such, I'll drop the
>comparative speculation at this point.

That's the most intelligent thing you've said so far in this entire post.
You've obviously had a bad day, so I'll let it go at that.

> That crap is nothing but BS, it died when Ham Radio was converted into CB

I've heard this so much on this group. It demonstrates a huge degree of ignorance. First, both Amateur Radio and Citizens Band are radio services. Citizens Band is a non-licensed service. Amateur Radio is a licensed service. Citizens Band is highly limited to frequencies in channels. Amateur Radio has several designated frequency bands with much more operating flexibility. Citizens Band is limited to allowed mode. Amateur Radio not only has a wide array of available modes, but is encouraged to experiment with new modes. Therefore the two are not the same or even remotely similar except that they are both radio services under the guidance of the FCC.

The problem with CB, from my vantage, is that there is too little monitoring and enforcement. At one time before cell phones and my license, I used CB for emergency communication. But I was always embarrassed to turn it on, especially with my wife in the car, because of the reprehensible behavior.

There are some who would argue that Amateur Radio is going the same way. I don't feel that this is true. Amateur Operators have much more organized self enforcement, which is encouraged by the FCC. The FCC itself has also taken some action in the recent past, although argueably more action is needed.

As for the Amateur Code, I think that more hams should make the effort to embrace the code. But there will always be some, like some of the vocal members of this newsgroup, who will choose vulgarities and rudeness over thoughtful discourse. I beg all those of you who care about our bands, our hobby, our fraternity, our most favored radio service, I beg of you to keep civil your tongues and work toward a mutually beneficial solution.

Amateur Radio Newsline(tm) Report 1358 - August 22 2003

From the 2003 Huntsville Hamfest and from our studios in New Orleans, this is Amateur Radio Newsline report number 1358 with a release date of Friday, August 22 2003 to follow in 5-4-3-2-1.

The following is a Q-S-T. I'm Don Wilbanks, AE5DW, reporting.

We begin this weeks newscast with the sad news that one of the voices so well known to ham radio will be heard no more. This, with word that Amateur Radio Newsline's Vice President and senior anchor Roy Neal, K6DUE, has passed away.

Roy was 82 when he died on Friday, August 15th at a hospital in High Point North Carolina. He had undergone heart valve replacement surgery three days earlier. According to his family, Roy was at peace at the end and did not suffer.

In both the worlds of broadcasting and of Amateur Radio, Roy Neal was a legend. He began his career at WIBG radio in Philadelphia. After military service in World War Two, he returned and helped pioneer the emerging medium called television at station WPTZ. He then joined the National Broadcasting Company where he spent most of his career producing and reporting for Network News. His specialty was science and aerospace.

But to hams, Roy will always be remembered as the person who brought manned Amateur Radio into space through the SAREX and ARISS programs. His close friend and NBC colleague Alan Kaul, W6RCL, joins us later in the newscast with more on Roy's many contributions. (ARNewsline, Philadelphia Broadcast Pioneers)

**

IN THE NEWS: JIM HAYNIE ON BPL

Roys Death came just as the Huntsville Alabama Hamfest was getting underway. One of the major topics hams were talking about is he growing debate over B-P-L or Broadband Over Powerlines. One of the people most concerned is ARRL President Jim Haynie, W5JBP:

--

Jim Haynie, W5JBP: "Broadband Over Powerlines is important, and just as I said on our website - this is bad. This is not good for Amateur Radio and I don't know how we are going to lick it. Quite frankly, and I want to tell you that right now."

--

Haynie made his comments to a packed audience at the hamfest's ARRL Forum. He says the League is doing everything possible to try to convince the FCC to not proceed with rule making B-P-L a reality. (ARNewsline)

**

RESTRUCTURING: HAM RADIO AFTER MORSE CODE

Jim Haynie also shares his thoughts on a subject dear to many hams: Whether Amateur Radio should or should not keep Morse code. Stressing that he speaks for himself and not the League, Haynie says code should be a requirement for the Extra Class license:

--

Jim Haynie, W5JBP: "What if we were to have three classes of licenses? Entry, General and Extra and Entry got phone privileges on he current Novice bands? And that's all.

So we ask questions on the exam about just that. They could only use 100 watts store bought radio equipment. Possibly even a two-year expiration date.

Generals - same thing except no new expiration date. The same privileges they have today. But for Extra we retain the 5 words per minute code requirement."

--

Not everyone agrees with Haynie. Scotty Neustadter, W4WW, is Chairman of the Question Pool Committee for the National Conference of Volunteer Examiners and this is his personal view:

--

Scott Neustadter, W4WW: " This is not your fathers or your grandfathers ham radio. Things have changed. Technology has changed, and I think that - to an extent - that we have to change with them. We have to recognize our history and in no way am I - nor do I know of anyone else ho is advocating any abolition of the right to operate CW on any Amateur band where you can operate it today.

What I do know is that there is a whole lot of people saying that it does not make allot of sense anymore that I require that you be able to do that. I think that's the distinction that we have to keep in mind.

--

While the debate over Morse Code in amateur radio's future goes on _ Jim Haynie points out that what will be decided remains a long way off_perhaps years. (ARNewsline)

**

HAM RADIO HONORS: W6JAY RECEIVES 2003 YHOTY AWARD

As enthusiastic hams began pouring into Huntsville's Von Braun Civic Center Saturday morning _ one of the Hamfest's biggest moments was taking shape. The Huntsville Hamfest is the setting for an exciting yearly event_and that's the presentation of the annual Amateur Radio Newsline Young Ham Of The Year Award. This year's winner is 17-year-old Jay Thompson, W6JAY, of Santa Ana, California:

--

Jay Thompson, W6JAY: "When I first started I did not think that thre was allot to do in Amateur Radio, but the longer I am a part of it , I realized that there is much more that I could do. And I know that as much as I have done so far, I know that there is still kore out there for me. So I'll keep trying to acomplish more and maybe Ill become even better at Amateur Radio in the future."
--

CQ Magazine is one of the award's principal underwriters. Editor Rich Moseson, W2VU, says that_while Jay stood above fellow nominees_many other young hams are big achievers, as well:

--

Rich Moseson, W2VU: "Every year we review applications and nominations from a variety of people. The person you see standing here on the stage is not the only really good kid who has done allot. He's just risen the crop a little bit. There are a whole lot of other young people out there in ham radio doing great things, and we congratulate all of them."

--

The Amateur Radio Newsline Young Ham Of The Year Award is in its 17th year. Vertex Standard and CQ Magazine are the Award's principal corporate underwriters.

That's it from the 23003 Huntsville Hamfest. The rest of the newscast will come from our New Orleans studio, but first this. (ARNewsline)

**

Break 1

From the United States of America, we are the Amateur Radio Newsline, heard on bulletin stations around the world including the 145.600 MHz repeater of the Hiway Amateur Radio Club serving Durban South Africa.

RESCUE RADIO: THE BLACKOUT

Ham radio came to the rescue as cellphone systems totaly failed during the recent North-East blackout. Bill Pasternak, WA6ITF, has more:

--

A New York Times article said it this way: When technology failed on a massive scale, some old-fashioned broadcasting stepped into the breach. This, as ham radio operators took to the airwaves to reach emergency workers.

The technology that failed was the North-East power grid that provides electricity to cities like Cleveland, Detroit and New York. This in turn lead to communications failures as numerous cellular telephone sites without generators or battery back-up - went away -- the afternoon of August 14th .

According to an ARRL Bulletin, with cellular systems overloaded or out altogether, the incident turned into a test of Amateur Radio's capabilities to operate without commercial power. The New York City-Long Island Section Emergency Coordinator is Tom Carrubba, KA2D. He estimates that ham radio operators handled 800 to 1,000 messages from Thursday afternoon until early Friday.

Diane Ortiz, K2DO, is the ARRL Public Information Coordinator for the area. She took to the air when power went down in her Suffolk County community. Ortiz called up an informal VHF net. Over the next 20 hours hams passed about 500 pieces of traffic. In addition to handling messages for people stranded in the city, amateurs also relayed other useful information. This included such items as which stores or gas stations were open.

In the Big Apple itself, ARES teams provided communication support for Red Cross Emergency Response Vehicles set up at transportation centers in Manhattan. ARES members also accompanied Emergency Response Vehicles to fire calls. RACES was activated in the greater New York City area after a state of emergency was declared.

Across the Hudson River in New Jersey, a net linked the Red Cross lead chapter N2ARC in Princeton with other chapters. Further to the West, Michigan ARES teams assisted emergency operations centers and the Red Cross.

In Ohio, Section Emergency Coordinator Larry Rain, WD8IHP, reports that all ARES organizations in the Northern tier of the stated were activated.

For millions of people in the Northeast and Midwest, the August 14th power outage took away access to wireless voice, e-mail and the Internet. The failure of the cellular system was especially evident. Nextel Communications spokesman Chris Grandis said that the company needs electricity to power its cell sites, but when you don't have that, it's out of his company's control.

The same held true for virtually every other wireless provider, few of which bother to have emergency power at cellular and wireless Internet sites.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF.

--

The bottom line: The traditional forms of communications failed, but hams were there to lend a hand. (ARRL, NY Times, others)

**

RADIO LAW: FCC DECLINES TO RECONSIDER ITS HUMAN EXPOSURE TO RF RULES

The FCC has declined to open an Inquiry into updating its human exposure to RF signals rules. In particular, the petitioner in this case wanted the Commission to consider possible health hazards not covered by the current rules, including non-thermal effects and the effects of long-term low-level RF exposure.

According to the CGC Communicator the FCC dismissed the petition, arguing that any such evidence should be presented to other, more appropriate expert agencies. The Commission also noted that its current human exposure rules have recently been upheld by the Second Circuit Court of Appeals. This, in the face of similar arguments by other petitioners. The complete story is in cybrspace at http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-03-191A1.doc (CGC)

**

WRC'03 FALLOUT: GERMANY GOES CODE FREE

It's another week and another country has joined the no-code revolution. Following Switzerland, the U-K, and Belgium, Germany is the latest country to announce that it is abandoning the Morse code test as a requirement for HF band operation.

According to the website of the German national amateur radio society, the DARC, from the 15th of August radio amateurs in Germany with a CEPT Class 2 license are allowed to use the High Frequency bands using their existing callsigns. Further details were to follow, the website said. (GB2RS)

**

RESCUE RADIO: OREGON HAM RECEIVES HONOR FOR GOING THE EXTRA MILE

Back on this side of the Atlantic, an Oregon ambulance dispatch coordinator, EMT and amateur radio operator has been named a recipient of a "Star of Life" award. This, from the American Ambulance Association.

Scott Waggoner, KC7DHJ, of Clackamas County was nominated for the honor by his co-workers in recognition of the many extra tasks he has undertaken at AMR's headquarters in Portland. Among other things, KC7DHJ was cited for his help in setting up portable repeaters during search and rescue operations, his treatment of minor injuries suffered by firefighters and his overtime work on an American Medical Response

ambulance. (CGC from OregonLive.com)

**

ENFORCEMENT: UNCOORDINATED REPEATERS TAKEN OFF THE AIR

It took three letters and allot of patience on the part of the FCC but a repeater interference problem in Stockton California has been solved. This, as Thomas G. De Lasaux, WA6SEK, removes his repeater from the air.

The matter goes back to September 9, 2002, when the FCC notified De Lasaux that his operation of uncoordinated repeaters on 224.660 and 441.275 MHz was causing interference to coordinated repeaters on the same frequencies in his are. By letter dated May 5, 2003, the FCC informed De Lasaux that the information he submitted in regard to the initial inquirey did not demonstrate coordination for either of the repeaters. Also, that until he was able to demonstrate current coordination, the primary responsibility to prevent interference.

At that time the FCC requested De Lasaux inform the agency within 20 days what steps you were taking to resolve the interference issues. On July 1, 2003, the FCC notified WA6SEK that we had not received a response to the May 5th letter, and enclosed an additional complaint. The July 1 letter afforded De Lasaux an additional 20 days to respond, and stated that if the matter were not resolved by July 25, we would initiate enforcement action against his license.

On July 22nd, De Lasaux notified the Commission that your repeaters operating on 224.660 MHz and 441.275 MHz had been shut down and would remain so. The FCC has now terminated all further action in this matter. (FCC)

**

ENFORCEMENT: FCC AFFIRMS $10,000 FINE AGAINST NY PIRATE

The FCC has affirmed a $10,000 fine issued on July 23rd of 2002. This, against the Reverand Yvon Louis in a case the case involves an aleged series of unauthorized FM broadcasts made from Louis' Calvary Tabernacle in Brooklyn, New York.

The FCC says that over the course of several months in 2001, Reverend Louis reportedly transmitted on 93.7 MHz, then switched to 88.1 MHz after getting caught. But it was not over yet. He then used 90.1 MHz after getting caught again, then reverted to 88.1 MHz in open defiance of the FCC order to stay off the air. (FCC, CGC)

**

RADIO HAPPENINGS PAROCHIAL SCHOOLS TO REMOVE CELLULAR ANTENNAS

Bowing to health concerns from parents, sixteen schools operated by the Catholic Diocese of Brooklyn will eliminate cellular antennas mounted atop buildings and church facilities. The on-line edition of the New

York Post reports that one parish stands to lose $18,000 a year in rent money used to offset the school's operating costs as a result of the change. (CGC)

**

COMMUNICATIONS FOR THE HANDICAPPED: BLIND STUDENTS LEARN TO NAVIGATE USING NEW GPS TOOL

A group of blind high school students visiting Catholic University in Washington D.C. recently shouldered specially equipped laptop computers. This, as they navigated about the campus and visited a pizza restaurant led by voice commands and the Global Positioning System.

A $1,000 Global Positioning System add-on to the BrailleNote keypad showed the students that getting around a college campus is suddenly much easier than it used to be. The complete story is on line at www.washtimes.com/business/20030729-093916-2006r.htm (CGC)

**

WITH THE HANDI HAMS: SUMMER CAMP ON THE AIR

Handi Ham station W0EQO, will be on the air during the summer Minnesota Radio Camp from August 23rd through August 30th. You can look for W0EQO on several different bands using CW, single sideband, FM, and digital modes. Also listen in cyberspace for an EchoLink net on Monday evening at 2400 hours GMT. The HandiHams will respond to all QSL requests for all contacts, including EchoLink contacts. (HandiHams)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

INTERNATIONAL - HOLLAND: NEW PREFIXES FOR THE NETHERLANDS

A New call sign prefix went into effect in the Netherlands on August 7th. On the High Frequency bands, the PA, PB, PC, PF, PG and PI prefix callsigns will now be be heard with one, two or three letter suffixes. On VHF and above, the PD, PE and PH are the prefixes, again with one, two or three letter suffixes. For example, the former PBZ0AIU, who sent in this news story, is now PC2A. (PC2A via GB2RS)

**

DX

In D-X, word that GM0GNY, is active as 4K0GNY from an oil drilling and production platform in Azerbaijan. He will be there starting the 20th of August for around a month. Look for him on daily on 40, 20, and 17 meters and QSL as directed on the air. (OPDX)

**

THAT FINAL ITEM: A FINAL 73 TO K6DUE

At the beginning of our newscast, we told you about the passing of a member of the Amateur Radio Newsline family. Roy Neal, K6DUE, died August 15th following heart surgery. One of the people who knew Roy best is Alan Kaul, W6RCL. Roy and Alan worked together at NBC News, and on projects benefitting amateur radio. Alan looks at the life of a man who was an institution in American broadcast journalis, as well as a driving force in amateur radio's conquest of space:

--

When Roy Neal, K6DUE, died last week, he was possibly the best-known ham in America. He left an indelible imprint on Amateur Radio.

Roy, more than anyone else, was responsible for getting ham radio aboard manned space craft and each new mission is testament to his legacy. His efforts earned Roy awards from the Dayton Hamvention, they designated him Ham of the Year and from CQ-Magazine, which this year named Roy to the Amateur Radio Hall of Fame. He also received honors from The American Radio Relay League, and other groups and served as chairman of two key AMSAT committees.

Roy was a good guy. He was my friend and colleague at NBC News.

I met Roy in the 1960's when I was working in Seattle and he came to town to report on aerospace giant Boeing. After I moved to Los Angeles and joined NBC News in the 70's, Roy and I collaborated on a lot of news reports.

As a correspondent Roy was best known for his coverage of the U-S Space program _ he was a friend of the original astronauts _ and often reported from both the launch site at Cape Canaverral and NASA Mission Control in Houston.

Not many people know this but Roy was also the author of a book about America's missile system_. called The Ace In The Hole. It was written at the height of the Cold War.

In the 1970's, Roy teamed with television producer Dave Bell, W6AQ, to launch the first of several documentaries about amateur radio. Number One was a 16-minute film, Moving Up to Amateur Radio. Followed a few years later by The World of Amateur Radio. Dave Bell remembers Roy as the ultimate professional:

--

Dave Bell W6AQ: "Of all the on-camera talent that I have known, Roy was the most assured and had the smallest ego of all of them.

He was a true professional when it came to the news. Everything was always true. Everything was straight from the shoulder and there was no compromise.

Roy was one of the old-school news guy. He grew up in the television business and he understood it better than anybody who is working in it today."

--

In the 1980's Roy helped convince NASA to put ham radio in Space aboard a manned flight of the Shuttle. That first ham-astronaut was Owen Garriott, W5LFL, on board STS-9. Garriott's story of the 1st DX-pedition in Orbit was told by Roy in the television documentary Amateur Radio's Newest Frontier.

--

Audio from ARNF: "This is the story of an expedition. The story of STS-9. The Columbia. And these are the explorers: John Young - the commander. Brewster Shaw the shuttle pilot. And the scientists Dr. Ulf Merbold, Byron Lichtenberg, Robert Parker and Dr. Owen Garriott -- an Astronaut who is also Amateur Radio operator W5LFL. This is an expedition to probe the outer limits of science and Amateur Radio's newest frontier.

--

Roy's next project was called SAREX - Shuttle Amateur Radio EX-periment, followed by the New World of Amateur Radio which profiled a new ham, teen-ager Kelly Howard, N6PNY. She's now all grown up, married and has kids of her own. She fondly remembers working with Roy Neal.

--

Kelly Lenhert (ne Howard) N6PNY: It was all so exciting, but it was also overwhelming. But working with Roy made me feel so comfortable. He made me feel competent in what I could do. He took me under his wing and he was really supportive and he got me to do what I needed to do to make the film and bring out the best in me."

--

Roy's last documentary was called Ham Radio in Space. Roy's interest was a natural fit with AMSAT. Roy's close friend AMSAT Vice President Frank Bauer, KA3HDO, thinks of K6DUE as his mentor.

--
Frank Bauer KA3HDO: "One of the things that Roy taught me was how to distill information into basically sound bites, if you will. I remember one time where we had to give a presentation - at Dayton - and we had 20 minutes. I told him that I did no know how he could so that, and he

said: `Frank, if I can do the whole world on the news in 30 seconds, you can do this in 20 minutes.' So Roy taught me a whole lot from an executive perspective because he was a true executive."
--

Another AMSAT officer who worked closely with Roy is Robin Haighton, VE3FRH, the President of AMSAT North America.

--

Robin Haighton VE3FRH: "The space program itself is in good hands, but there is no doubt about it that we will miss that leveling confidence that Roy always brought to the meetings and the discussions. He made friends with everybody. The moment you met him you felt that here was a man you could trust."

--

Other comments have come in from all over the world From New Zealand, the past president of NZART, Jim Meechen ZL2BHF sent his condolences. As have numerous other Newsline listeners. Another of Roy's friends, Bob Heil, K9EID, had this to say.

--

Bob Heil K9EID: "I'm going to miss his spirit. He had a spirit about him that when you heard him on the air, you stopped tuning. This was something special you were listening to. And it wasn't always the tone of his great broadcast voice. It was his spirit. He was always in an up-mode about this hobby."

--

Roy was in the first generation of television newsmen who began their craft after World War Two. He started in Philadelphia and then moved to the West Coast where he helped found the NBC News bureau in Los Angeles. That was during the days of the old John Cameron Swayzee Camel News Caravan.

Roy was at ease in front of a microphone _ and could talk to millions of television viewers as easily as he could talk to the ham across town. On camera, he had the uncanny ability to read to time, precisely to time. When I produced updates for NBC Nightly News and Roy was the on-camera talent, I would time the newscast and tell Roy how long he would have to report the story.

I'd say something like this: "Roy, can you do it in 19 seconds?"

And Roy would always reply, "You know I can old buddy."

Roy liked that phrase "old buddy." He used the phrase to address friends and co-workers for some time. As for the updates - Roy always got them right. He would stop talking just an instant before we'd have to switch back to the network.

By the time he retired in 1986, Roy had worked out of the Los Angeles news bureau for almost 35-years. He'd probably written millions of words, and brought his audience uncountable hours of news and information.

But even in retirement, Roy Neal didn't stop doing what he did best. He was no stranger to listeners of Amateur Radio Newsline who knew him as a tireless volunteer giving freely of his own time to report the latest information -- always signing off in his own stylized way.

--

"This is Roy Neal, K6DUE. Thanks for listening and 73."

--

73, Old Buddy _ I really hate to see you go.

I'm Alan Kaul, W6RCL, reporting for Amateur Radio Newsline.

--

Roy leaves his wife Pat, and sons Mark and David. Services were held August 19th at the Wesley Memorial United Methodist Church in High Point, North Carolina.

In lieu of flowers the family requests that donations in Roy's mame be made to the Astronaut Scholarship Foundation at the Astronaut Hall of Fame. The mailing address is 6225 Vectorspace Blvd, Titusville, Florida, 32780. Please mark your envelope to the attention of Linn Le Blanc.

And this final thought. Yes, we at Newsline have lost a very dear friend. More important -- so has all of Amateur Radio.

73, Roy. None of us will ever forget you. (ARNewsline, W6RCL)

Well David -- you can track NG's threads by going to URL:
http://groups.google.com/

Type in the desired callsign or handle

Get your desired information --- as early as Feb 6, 2000

So the answer is at least 3 years !!!

And there were 11,000 Plus posts related to this callsign !!!!!! <---
Exclamation Signs

Money talks, public service walks- BPL is a certainty.

The "null it out- anyone can do it" argument is crap-
works well in theory, poorly in the field.
Even with excellent nulling, QRP and other weak signal work is finished.
Shortwave DXing is finished.

You have three choices-
Give up radio.
Move far enough into the country to avoid the polluted grid,
"Gorilla warfare-" Power lines that leak out, can also leak IN.
50 watts of broadband noise generator plugged into the nearest socket
would do. Note that I would never advocate anything illegal.....
D.S.

If she had received this as a normal sequential assignment, it's doubtful
that anyone would say much. It's just very puzzling why anyone would
request the call sign.

Gosh -- how many folks would look up (on QRZ.com) if W5TIT was a
sequential assignment or vanity callsign (which it is) before making
comments ?????

Further the requestor must have been aware of the connotation -- hence what
better way to seek notoriety ?? So no puzzle at all.

I recall when Jerry got a real "catchy" call -- N6VD (sequentialy) -- did
not bother him a bit.

Then there is N0SEX and N0DX (real Calls) , and several others which are
just a bunch of letters and numbers (or are they?)

Then there are those that are fun to make up -- like IM1NUT, PH&#65533;NY --
DX4U -- 6L6GC -- RG8U
-- SL1M -- P1RTE -- N&#65533;QSL -- DX1S -- WH1M -- L1D -- GR1D --
W&#65533;W -- OZ&#65533;NE -- L&#65533;GUN
N&#65533;QRM W&#65533;RK N&#65533;PE N&#65533;ISY KN&#65533;W -- CH1KEN

Money's the half of it. Ego and politics are the other half. Pols like Michael Powell and Billy Tauzin want credit for sweeping away all those presumably outmoded concerns about RFI so people in rural areas can get the on ramp to the modern hi-speed info superhighway right there in their fusebox.

As a former US President said, "We could do it, but it would be wrong."

I have to wonder how much BPL access would be knocked out by a sparky old ozone generating vacuum cleaner. One room? A few houses?

And let's not forget our old nemisis, the bargain basement switchmode computer power supply. I have one which pumps enough hashy variable frequency hets to overwhelm even strong local broadcast stations on a radio in the same room.

Some thief ran, well -- hobbled, off with my arc welder a few years ago. I never replaced it. Good thing, I now realize.

I kinda doubt electrical interference would cut off somebody's BPL access entirely. I picture the error rate going up and up, and the connection speeds going down and down. Maybe even slower than dial-up. Even worse, the guy who pays for BPL is likely to blame the power company, rather than the real culprit -- the clown who just doesn't give a damn about RFI.

Heard Mr. Hundt speak a while back at an industry
get together, a very impressive individual and speaker,
for sure! Spoke at length about his tenure at the FCC.
What an eye opener! Most noteworthy were his

comments on the resistance to change at a dinasour of
an agency.

But, just as with trading messages with a few noteworthy members of the group, no purpose is served discussing it any more.

Kim is a nice enough lady AFAIAC, and beyond that I just look at the situation as a bit of a quirk. Everyone in the newsgroup has one or more.

>*harmonic* although it depends upon several factors. Generally, the odd
>harmonic components add and the negative components subtract with modulated
>sine waves.

Oh my, such interesting math (which wasn't shown)...:-)

That isn't quite the case in any real world OR the theoretical world.

First of all, in the real world, you must be presuming some absolute
zero phase shift for each harmonic to make your statement. That just
doesn't exist.

I can do the numbers on the series formulas for AM, FM, or PM no
problem but so few in here can follow even the beginnings of such that
I won't care to put it in public view...:-)

>Having said that, most modern rigs that produce FCC quality
>signals will filter such harmonics several 10's of dB rendering reception
>almost impossible except in the near field.

Really?!? They work PERFECTLY ACCORDING TO SPECIFICATIONS
ALL THE TIME?!?!?!

That's not a realistic view, but feel free to indulge if you've laid out a
big
plastic for a couple kilodollars worth of transceiver. :-)

That old standby tube output matching circuit, the "Pi-network" is only
good for about 18 db per octave attenuation above cutoff frequency. Not
all modern transceivers have such "lowpass filters" since they rely on
Class B or AB linear amplifiers with rather broadband transformers
matching PA to load.

A typical 100 W RF transceiver has a fundamental power output of +50
dbm. If there is as much as "60 db harmonic attenuation" in it, the
harmonics can be -10 dbm into the load. That's 100 microWatts and

DOES radiate and rather beyond the Near Field...the level is a lot higher
than most "40 db over S9" signals (depending on who assigned what
levels to a local transceiver S meter).

>I thought I needed to correct
>this BS, that emanates from someone who claims to understand modern amateur
>technology theory.

Feel free to do your numbers in public, senior.

Call it all the "BS" you want to. When you can actually MAKE a linear
(of any class) go as low as 40 db down on total harmonic output, I'll be
giving you a round of applause.

>Hams transmitting signals of any significance on 12MHz
>will not be hams for long.

Oh? Were there any recent NALs published at the FCC or ARRL sites
on such things? Let us know, please, I've not seen any of those
concerning out-of-ham-band interference due to harmonic generation.

I've looked high and low on the FCC website and can't find any
amateur radio "extra-lite" license class.

>We only need 5wpm nowadays, and if
>I want to QSO Larry, I would want to have some skill.

Not an answer.

First of all, you've not established any NEED for a morsemanship test
for the US amateur radio license having below-30-MHz privileges.

I don't know which "Larry" you are talking about, but there's never been
any NEED for "QSO-ing any 'Larry'" in the US amateur radio regulations.

>be much of a burden.....

True enough. :-)

Let them get burned up and send smoke signals. Electronics runs on
smoke; if the smoke leaks out it won't work. :-)

Partly. The power company doesn't care. The FCC seems lax in Part 15 enforcement, among other things. Certain congressmen seem to think the only impediments to the Jetson way of life are outmoded regulations. The neighbors only think of interference when Tom Brokaw turns green and they blame it on the SWL's random wire antenna.

The only people who give a damn about RFI are the people who use radio.

I'm not an expert on BPL, but I don't have any faith in the FCC's ability to look past a glossy demo and into the real world, either. If I had been invited to the demos, I'd have brought my old vacuum cleaner and my homebuilt PC with the noisy power supply(which, I assume, is good under Part 15 regs. Ha!). I think somebody would give a damn if everyday electrical noisemakers slowed BPL.

The special recall election in California is NOT about amateur radio.

> Lennie will rant on and on about Japan, his days as an "enginer",
>and his stellar career as a "contributing editor" of a magazine that
>wwent belly-up.

Please use a spellchecker when you become so enraged.

I was an Associate Editor at HAM RADIO magazine, so listed on the "masthead" (listing of staff) every month for two years. HAM RADIO magazine was an independent technically-oriented monthly that was published for TWENTY-TWO YEARS. It got started and survived in competition with QST, CQ, and 73 for over two decades.

There can be no "blame" attributed to the content of HAM RADIO magazine. It was always superior technically to all the others. The fault may lie in the dwindling readership of radio amateurs no longer caring about technical matters or home workshop projects sufficient to attract advertisers and advertising revenue.

HR, CQ, 73 never had the financial backup of a membership organization to keep them afloat when advertising revenue was hard to get. QST survives only because it is basically a membership magazine with the (~12 million) resources of ARRL behind it. The three independents succeeded and stayed in business despite not having such guarantees of demographics to attract advertisers.

I was, and continue to be an electronics design engineer both as professional (paid) and amateur (unpaid).

The fact of the matter is that I've DONE IT, have the documentation and enough witnesses to convince any court except the vigilantee groups who only want to destroy others while spewing forth hate and vomit on those who've done things.

>> talking on the telephone.
>
> Sorry. Incorrect.

Show PROOF of your mighty military "communications," big mouth.

You TALK a big story without mentioning ANY details.

You haven't named a single one of the "hostile actions" you claim you were in.

>
>> It's painfully obvious, Brian. Steamy hates me. I served in the US Army
>> so, naturally to him, anything Army is subject to hatred, villification,
and
>> denigration.
>
> I ahte liars and people who try to use somoen else's military
>service to make themselves look good.

You just HATE.

My military service is archived at NARA. Not only that, I have witnesses still alive who were at the same Army radio station I served when I was there. No lies.

You HATE someone else being successful in anything so much that it makes you almost violent. That's a bad mental symptom which needs treatment.

>> Steamy never did any primary communications while in the USMC. Naturally
>> he resents that anyone else did.
>
> Sorry. Incorrect.

It may be "incorrect" but it is more likely quite CORRECT.

You've NEVER stated in any detail what you actually DID in the USMC insofar as radio communications. You conveniently gloss over any details. Anyone who really liked their past work will remember details of it and "talk shop" about it. You never do.

All you talk about is some general phrases (copyable from any little PR booklet) about "warrior skills" and honor and glory...NO DETAILS.

All those generalities and NO DETAILS...sure marks of a bluffer, a con man, trying a selling job on those with no experience in some area.

In short, YOU LIE.

Then you try to say others "lie" when they give details, provide references and have documentation to prove what they say.

>> Steamy can't handle real truth.
>
> Sure I can. You are liar, an antagonist, and a creep.

Antagonist, yes. Liar no.

I've provided details, references, even names of still-living witnesses as proof of what I've done.

You've never tried to confirm anything, have you?

You've rejected a scan of my first First Class Radiotelephone (Commercial) license, not once but four times in e-mail.

You just can't tolerate TRUTH. It upsets the little fabric of LIES you've created about yourself.

> Ahhhh yes...Lennie once again shows that "honoring" Veteans is a
>one way street for him.

I HONOR all who actually served their country honorably.

I don't honor posers or posturers who can only claim generalities and spout gratuitous phrases or are only interested in fantasies of heroic "hostile actions" they were never involved with in reality.

> If you were truly an "enemy", Lennie, wwe'd not be having this

You are envious. Terribly so. There's no other explanation for the hyena
laugh writing...other than another symptom of your growing psychosis.

> And YOUR "operative word" there was "HAD" tasks dealing with HF
>radio...I HAVE dealings with HF radio...And NOT on someone elses'
>dime, either.

Past tense is fine. HF radio is no longer any primary medium for
either national or international radio communications...it has become
secondary to very high speed fiber optic digitally-encoded comm and
geosychronous communications satellites.

That I was actually involved in HF radio communications before your
birth, for three straight years, makes you very tense. It should, you
have NO comparative claims verifiable through documentation or
witnesses to prove your "matching" experience later.

>> I will be glad and honored to link my name with my old Signal Battalion

>
> Your "link", Lennie, will be forever remembered in THIS forum as
>a shameful and scurrilous attempt to USE those men and thier sacrifice
>to make some silly attempt at improving your image in here.

I don't "use" anyone in the military. I was IN the military, doing HF radio
communications, have the documentation and the living witnesses who
were at the same radio station at the same time I served.

I've researched US military records to trace the history of my military unit from its first organization in 1946 to the present day. The Army callsign of ADA has been preserved as the callsign of the Headquarters, US Army Pacific, as important now as it was 50 years ago as the primary communications facitlity of the US Far East Command in Tokyo.

> It's not possible. Every time you enter this forum and start
>that same old spiele again, you reprove the point that you are nothing
>but an NG troll.

Perhaps...certainly so to some who think of US amateur radio as some kind of substitute for a failed military career and must always act as if the HOBBY of amateur radio is some kind of "military" SERVICE requiring an espirit de corps worthy of the USMC. Or BSA.

I'm just trying to advocate the abolishment of morse code testing for any US radio operator license. Instead, I get all this spewing of HATE and VOMIT from certain parties exhibiting classic symptoms of psychoses.

Get some mental help, Steamy.

It may improve your life and will certainly improve the lives of all around you.

>The cold hard nut of the matter is that nobody gives a rat's ass what
>you think is "right" or "wrong". In fact that's an oxymoron in itself.
>You're just an outsider around here Putz.

Outside of your elite little core group of Brass Pounder Leaguers,
you don't care anything at all about anyone else's viewpoints and are
determined to subjugate all to your royal views.

Everyone who doesn't agree with or worship your "achievements" are
in what you call "outsiders."

Your own "cold hard nut" seems to be giving you problems. Consult
a real MD to seek a cure.

>> "Dissed," not discussed, Dwight.
>
>It's neither Putz, it's just entertaining as hell. As in one more
>unlimited source of La-la Land guffaws n' giggles. It's kinda grim
>elsewhere, we all need a bit of comic relief so La-la Land comes up
>with another one. Quite timely actually.

Poor baby. Living there in hoagieland with NOTHING happening
and you want to diss the biggest state in the USA. Tsk, tsk, tsk.

Typical easterner "we are the center of the universe" thinking. The
sun and the rest of the world revolves around you. [that may be what
causes your dizzyness?]

>And of course you do know, you're the Henry KIssingeer & Colin Powell
>of RRAP. More humor from La-la Land.

Oh, my, more name-calling vomit spewed, now trying for dissing some
notable government movers and shakers.

What has mighty morseman Kellie done that is so worthy of being
"superior" away from mouthing off in newsgroups?

>> Nonsense...to the easterners who never considered California as ever
>> belonging to the union. :-)
>
>For damned good reasons too, and you're a good illustration.
>
>Every country has pulled one monumental blooper of another. Swiping
>La-la Land from the Mexicans was one of ours. I vote we give it back.
>I think there are others who will agree.

Feel free to secede from California any time you want. California can
survive without hoagielanders. :-)

As usual, you mouth off without bothering to check history...but that's
such a common thing you do that it isn't worth trying to correct you.

>> There's NO amateur radio in the special recall election in California.
>
>Jim Weir gave up his ham license did he ya PUTZ?

You would NEVER have known about Jim Weir's registered candidacy
without my mentioning it. :-)

Jim Weir is one of 130 other candidates and he has some "credentials"
in government politics: Eight years with the Nevada County (CA) Board
of Supervisors, according to his public biography.

Does the HOBBY of amateur radio give "credentials" for public office?

I don't think so.

>> I'm also aware of the provincial bigotry of easterners and enviousness
>
>Bwaaahaha! No further comment req'd!

True enough...YOU have gone into vomitus uninterruptus on provincial
bigotry long enough.

>> of the most populous state in the USA (about 1 in 8 Americans live
>> here) and the fact that California's budget ranks 5th through 7th
>> (depending on standards) of world NATIONS.
>
>It's also been established that around one out of eight in any
>generalized population is a kook. Lotta ramifications in that with
>respect to La-la Land and YOU, ya PUTZ.

More provincial bigotry vomit.

Check with your MD...you may have a serious medical condition.

Or see a veterinarian...more fitting the beast within you.

>> Just the same, there is NOTHING about amateur radio in the special
>> recall election in California. Nothing.
>>
>> Go bitch about something non-amateur elsewhere...
>
>Since you're not a ham why don't you follow you own "instructions" and
>take your bitching about HAM RADIO POLICY somewhere else?

I have. This newsgroup turned into a squatter's rights poopy CHAT
ROOM long ago. No debate or discussion really happens in here.

All that seems to go on in here is a bunch of (mentally) old farts
pooping about the joy and majesty of morsemanship and how they
are all so damn superior to professionals due to long tenure in a hobby.

>Hey Putz, you're missing a golden opportunity to exercise your
>all-encompassing skills, experience and expertise on EVERYTHING. You

>need to climb aboard one of the candidate's campaign organizations and
>do your do. I'm thinking you'd be the perfect public relations
>spinmeister for the Midget & Bimbo slate. You'd fit.

Done that, too, but much reduced in effort since the Camelot days of
John F. Kennedy. You've never heard of Peter Ueberroth, have you?
I don't think you do. All you know about is "midgets and bimbos."
That fits. :-)

Now go back to your squatting and pooping in this chat room. Rent a
BobCat to shovel up all that you've left in here just from this message.

If you do not know this to be true without seeing the math worked out for
you, then you should not be discussing harmonics in a technical context.
>
> That isn't quite the case in any real world OR the theoretical world.

Your saying so does not make your statement true. We are talking technical
issues here which are a matter of common knowledge to the RF community so
your flames are irrelevant.

>
> First of all, in the real world, you must be presuming some absolute
> zero phase shift for each harmonic to make your statement. That just

Since 3dB is half the power, you cut the power in half 6 times. 18dB is not
bad over one octave.

Not
> all modern transceivers have such "lowpass filters" since they rely on
> Class B or AB linear amplifiers with rather broadband transformers
> matching PA to load.

They had better filter it so that you do not have a significant signal at
12MHz when transmitting in the 75 meter band.
>
> A typical 100 W RF transceiver has a fundamental power output of +50
> dbm. If there is as much as "60 db harmonic attenuation" in it, the

David,

Looks like I'm going to have to research some nice linear as well as a decent HF station. I had been looking at a vertical to avoid all of the horizontal lines in the neighborhood, but, on second thought ... 1500 watts horizontally polarized, 50 feet from the power lines might prove interesting :)

An interesting note. I do recall having learned American land-line Morse once as a lark and was capable of perhaps 16 words per minute - but I was using a mental look-up table for those characters/numbers that were different from international Morse. The long and short of it is this: I did copy with no errors 40 words per minute of international Morse code in the US Navy in 1967. I used American Morse once only in 1968. I did not use any Morse from 1969 until I retook the amateur extra exam in 1993. I passed, but I have forgotten the American Morse. A few weeks of writing some Morse code programs did pump my speed up just a wee bit on international Morse :)

There gpes the Brain child on another erroneous tangent. Only in the
ham shacks of NCI members has use of code began to wane within ham
radio. If he'd bother himself to actually check what'seing done *on
the air* he'd soon find that the use of Morse has grown within the
ARS,not waned. All this in spite of the hearfelt wishes and strenuous
actions of him and the likeminded.

Probably nothing at all. BPL operates on conducted RF, not radiated RF.
A solar event might put a random pulse or two on the grid, but not a
sustained coherent signal which might impair BPL. By the way, BPL would
also care little about random white noise.

He could always spew it out by the yard....

He was also good at ignoring or disrespecting those of us in the field who were knowledgeable and involved in enforcing the FCC regulations, even those regs that he himself was pushing through. Perhaps he thought that FCC Regs could be complied with by some magical process.

He came out to San Francisco for "an industry get together" and didn't have the decency to stop by the field office to show his face to the staff members there as other Commissioners and Chairmen usually do - part of having that rank. But his staff bag-carriers sure insisted that the field staff do all sorts of "gofer" and "fetch-it" jobs "for the Chairman", including motorcade security. We didn't mind doing it - that was -our- job - but loyalty, like respect, has got to be a two way street.

>Spoke at length about his tenure at the FCC.

Did you ever hear Dick Wiley speak about -his- tenure at the Commission?

He was the last decent Chairman, excepting for Jim Quello who was a damn good Commissioner and served a very short time as Acting Chairman only because the Prez was too embarassed not to designate him as such just before he retired.

Both of the above knew how to run the Commission to get the work done properly and were very conscious of the fact that it was the technical staff that supported the Commissioners. IIRC Mr. Quello was the last Commissioner to have an Engineering Advisor as a full-time staff assistant.

>What an eye opener! Most noteworthy were his
>comments on the resistance to change at a dinasour of
>an agency.

The changes that he wanted to make (and finally bludgeoned through) were to get the agency out of the technical spectrum management business as its primary function and into the "auction it off to the highest bidder" business as its primary function.

If you consider that as the role of a telecommunications regulatory and spectrum management agency, I feel sorry for your ignorance.

When enough of the pros who believed in proper professional spectrum management finally gave up in disgust, he succeeded. The resulting state of regulatory anarchy on "the airwaves" is the result.

He would have been far more respected if he would have split the agency in two, getting The Congress to place the technical management and enforcement function - which he didn't understand - into an agency such as NTIA (as Canada did with DoC, now IC) and keeping the rest - which apparently he did understand - as a separate entity to play the political and auction games (as Canada does with its CRTC).

>phase shift to zero, then you have eliminated the harmonics, stupid.

I'm not sure where you get this "phase shift reduction to zero" but it
isn't quite like that. Sigh. Read following -

OK, let's get down to basics. From "Electronic Designers' Handbook,"
by Robert W. Landee, Donovan C. Davis, Albert P. Albrecht, 1957,
McGraw-Hill Book Co., Chapter 5, here's the instantaneous voltage
at any point in time of an AM RF waveform:

e(t) = E [1+M Cos(omega_m t)] Sin (omega_c t)

Where:

e(t) = instantaneous RF voltage e at time t
t = Time position, seconds
E = Peak voltage of unmodulated RF carrier

omega_m = radian frequency of modulation
= (2 pi f_m)
f_m = Modulation frequency, Hz
omega_c = radian frequency of RF carrier
= (2 pi f_c)
f_c = Carrier frequency, Hz
M = Modulation factor, range of 0 (none) to 1 (full)

That's not intuitive. By some identities and reforming the AM equation, the following can be found true for a single modulation frequency:

e(t) = E Sin (omega_c t) + [E M / 2]Sin[(omega_c + omega_m) t]
+ [E M / 2]Sin[(omega_c - omega_m) t]

The first term on the right side is the Carrier. The second term group on the right is the Upper Sideband and the third term group (next line) is the Lower Sideband. If, through other means, the Carrier is suppressed and Upper Sideband is suppressed, then a "SSB" Lower Sideband signal is formed and it can be expressed as:

e(t) = [E M / 2] Sin [(omega_c - omega_m) t]

If there were two modulation tones, f_a and f_b, the Lower Sideband SSB equation is then:

e(t) = [E M_a / 2] Sin [(omega_c - omega_a) t] +
[E M_b / 2] Sin [(omega_c - omega_b) t] + ...

where:
M_a = modulation factor for frequency a,
M_b = modulation factor for frequency b
omega_a and omega_b are the radian frequencies of modulation frequencies f_a and f_b

The above can be expanded to include any number of frequencies in the modulation process but they will have the most impact on the distortion caused to e(t) through any amplifier. That distortion will create the same as many modulation frequencies, all harmonically related in frequency and would be a form of "super modulation" of AM or AM on top of the SSB (AM) signal.

There is NO magic cancellation of phase terms as alleged in such AM on top of SSB, just a lot of extra sidebands generated as a result of the distortion. However the distortion sidebands would be at much higher frequencies than the modulation frequencies. Those can be synthesized in seconds using a computer program such as WAVESPEC which I wrote in 1993 and released as Shareware on ZDNet for PCs.

Painter's "Signals, Modulation, and Noise" gives a better description of such AM-on-top-of-AM (or SSB) but I don't have a copy available right now to reference contents.

Landee-Davis-Albrecht take up a whole chapter on modulation
and the derivations to show Carrier-Upper and Lower Sideband
terms which are Real representations of modulation products for
AM and SSB. Distortion in a final power amplifer will result in
AM on top of the AM/SSB signal, creating modulation products
centered around carrier frequency multiples.

The Carrier-Sideband form of AM illustrated above also contains
a clue on how a Phasing method of SSB generation works for
either sideband selection. Do your own math on that...it isn't
part of this non-discussion. :-)

>Pretty close, most of the time, dummy.

No need to vomit nasty names here. I've given you an opening
for discussion on the mathematics of modulation.

>> That old standby tube output matching circuit, the "Pi-network" is only
>> good for about 18 db per octave attenuation above cutoff frequency.
>
>Since 3dB is half the power, you cut the power in half 6 times. 18dB is not
>bad over one octave.

18 db per octave is approximately the cutoff slope of a 3-section
Butterworth-response L-C lowpass filter. Most "Pi-networks" are based
on Butterworth-response values.

>> Not
>> all modern transceivers have such "lowpass filters" since they rely on
>> Class B or AB linear amplifiers with rather broadband transformers
>> matching PA to load.
>
>They had better filter it so that you do not have a significant signal at
>12MHz when transmitting in the 75 meter band.

An L-C filter is not absolutely necessary. What is required basically is
to provide a "clean" signal prior to final power amplification. The final
amplifier can be improved (distortion reduced) by several methods:
negative feedback at RF; envelope detection and feedback to the
modulated carrier source; etc.

>0.1mW? Hardly a significant signal.

"Significant" is a highly subjective word. -10 dbm level is FAR
higher than most received signal values whose carrier level
ranges from -120 dbm (barely above the internal noise level) to
-40 dbm (slammin-home signal of 2.2 mV into a 50 Ohm coax
from antenna).

-10 dbm or 0.1 mW is equal to about 71 mV in the 50 Ohm
coax...30 db higher than -40 dbm or nearly 32 times the
voltage.

>> Feel free to do your numbers in public, senior
>

>That would be a rather boring and somewhar ominous excercize to do on a
>newsgroup, dummy.

American spelling is "exercise." Exercise your word power first.

Is calling others "dummy" instead of showing math "more fun" for you?

>> Let us know, please, I've not seen any of those
>> concerning out-of-ham-band interference due to harmonic generation.
>
>Neither have I. Most NAL's are for in band interference, referred to as QRM.

Then they must not exist, right? :-)

Is that because the FCC and ARRL signs are in opposition and
they cancel one another out? :-)

BINGO!

The reason that lights and motors work well enough is that they aren't
affected by the junk that gets impressed on the power lines.

And finally, just finally, I wonder exactly HOW the power companies are
going to respond to the problems of their OWN RFI generation?

Lessee, lets look at the enforcement letters from the FCC. Many of them
are to power providers because of equipment that is interfering with
some ham somewhere. It has to get to the enforcement stage, for crying
out loud. So are the Power companies going to replace all those
transfprmers and other power line junk that is spewing out RFI for the
BPL'ers?

Hmmm. I can't imagine any way Ham radio interference would do any good, even if legal. Interference might not have effect it at all. Or it might cause a slowdown the BPL user would attribute to internet congestion. If the BPL user believes interference is casuing a problem with his gee-whiz powerline internet access, he's gonna squak to the power company and maybe the FCC. Face it, radio hobbyists are in no position for poor public relations. There are more people who will be attracted to the bright, shiny promise of BPL than there are radio hobbyists. Considering the numbers, would it be unlikely for the FCC to redefine the interference limits?

I'd be curious to know how vunerable BPL is to interference. I have no doubt the BPL people have run tests, and I'm a little surprised they're not at the front of a webpage somewhere. Ham radio may not have alot of effect. The power lines will only absorb a fraction of what's transmitted, and will probably re-radiate most of that. I would think interference from devices plugged directly into the lines would have the most effect. Like spikey old universal motors and cheap switchmode power supplies.

Politically, it's far better if damaging interference comes from everyday objects around the home. Like the vacuum cleaner, the microwave oven, the kid's computer, etc.

And nothing will help as much as bringing new people into the radio hobby.

Len, this is bullcrap, and, it is boring. You have no idea to what the math really means. Sorry, but I will not continue to give you a forum just so that you can 'baffle 'em with bullshit'. That's what you are doing. I doubt that you even have a BSEE, otherwise you would not have to cite the author when explaining what is common electrical engineering text book material (that you have misinterpreted).

well it is no different than john boy running around calling himself
ve1jot...i don't understand how some dude that lives in colorado goes
around calling himself a canadian hamster.....i guess it is a
attempt by some old agitator wantabee to try and shake the dogs of
war, but as is usually the case.....these types of blowhards

always make a mistake and it can be safely said that both , danny boy and johnny boy are two peas in the same pod so to speak.....long on the mouth and short on the ass..... .....doncha know.....

Wow, modern day research on Morse Code. Sounds like the ARRL's
research on the 5MHz band.

> > They don't define Morse Code but should, they don't define WPM rate

Is that your final answer?

And
> Farnsworth IS Morse since it relates a letter directly to a sound without
> counting dots and dashes.

If Farnsworth were Morse Code, it wouldn't be for that reason.

Farnsworth is a method of teaching and learning
> Morse that actually helps a person to reach a useable level of ability.
> Methods that allow the student to count the dots and dashes (i.e. slow
> letters) or use "sound alikes" or visual pictures all lead to limiting the

> break the resulting barrier (usually occuring at about the 10wpm level)
> often having to "start over" at a higher character speed to do so.

But the FCC doesn't address learning code. They address examining the
code. And they specify "Morse Code at 5 WPM," not Farnsworth Code at
13-15 WPM.

> "The Art and Skill of Radiotelegraphy" has a very thorough discussion of why
> barriers sometimes occur at certain speeds. The book is geared towards
> those who want to use the mode rather than those whose goal is passing the

>course, on the internet and cellular because that'll be all we have left.
>The first amendment will still be alive and well, just as it is now, tho, if
>that's any consolation.

.....Quoted message ends.....

OK, Kim, did you find the part about taking the ARS "...one step closer
to extinction," or not? If not, which part did I "translate" into that exact
language?

>> > It is people like Larry and his attitudes that are
>> >destroying the ARS.

Don't look now, Kim, but I've never been admonished by Riley
Hollingsworth about doing something which could potentially cause
prospective hams to decide to go fishing instead.

>> I don't see how that's possible, Kim. After all, I'm not the one who
>> is sporting a callsign which is shamefully demeaning to women in

>If you truly believe that about my callsign, Larry--and I don't believe you
>do, then you are destroying it as much as anyone else.

I do believe that, Kim, but I fail to find any logic in your statement above.
However, that's just you being you.

>> >In Larry's mind, it's probably my fault because he has
>> >to be so hateful toward me because of my callsign :)
>>
>> It's not hate, Kim. It's concern. Concern for the negative image of

>> a blatant lack of respect for the image of the service.
>>
>> 73 de Larry, K3LT
>>
>
>IF for one minute you are concerned about negative images for the ARS, then
>you would shut up, Larry.

What am *I* doing to give the ARS a negative image, Kim? My on-the-air
operating is the only thing that matters regarding my "image" as a ham, and
I've never had any complaints. However, Riley Hollingsworth has made it
quite clear that *you* and *your* callsign are definitely a problem. In fact,
a big enough problem to cause him to take the time to compose his
reply to your E-mail. That speaks volumes.

Larry, I seriously doubt Hollingsworth would have said anything if he had known his words would be used as a basis for your harassment of Kim over this subject for several years.

You've never been admonished by Hollingsworth simply because you've never had the guts to tell him what you're doing. So, since Kim was willing to contact Hollingsworth over the choice of her callsign (her behavior), why don't you contact Hollingsworth to ask if he feels your behavior (your use of his words to publicly harass Kim for all this time) has any effect on Ham Radio?

Prove it does, Larry. Prove code testing serves a purpose today worthy of a specific government requirement above and beyond all other operating modes. The trends are moving towards the elimination of code testing. If you have a good reason to change that, now is certainly the time to speak up. Nothing you've said so far has been able to change those trends. Endlessly repeating what you've already said hasn't either. So, perhaps you should think of something new to say.

Hey, just look at all the free publicity you've gotten from that callsign.
If this keeps up, you'll be famous by the time Larry is finished pointing
out your callsign to everyone.

After all the ranting you did in that message, you have the nerve to tell others to go elsewhere? Don't hold your breath. Political discussions are almost a tradition in this newsgroup, and your rants (about the "bigotry of easterners" and so on) certainly isn't going to change that.

I can offer a few ideas why she might request it. Years ago (the 60's), part of the women's movement involved the idea that breasts were nothing to be ashamed of - women had them and men had to accept that fact (as many men from that time may fondly remember, this eventually led to women burning their bras).

Later, the women's movement urged women to accept their own bodies as uniquely theirs without placing some type of negative connotation on that. This had to do with the idea that a woman is no less important simply because her body is different than a man's.

Still later, all this evolved into the idea that breasts were a sign of power equal the a man's penis (the phrase "breast power," an alternative to "women's power," came out of that). This had to do with the psychology thinking of the time which said many supposedly male things (guns, missiles, and so on) were actually phallic symbols.

In the end, it may simply be that Kim likes how her callsign sounds.

No sir, the BPL clods have *not* done much if any interfernce testing
wherein lies the underlying reason for whole uproar and is the reason
you can't find info on their "tests" online. It's all explained in
depth and well documented in the ARRL website.

By the time that might happen BPL will either have taken over the HF
spectrum or been forgotten as another idiotic and failed dotcom
maneuver.

Far beyond the question of hams interfering with BPL comes the much
more important question of BPL interfering with the long list of
licensed incumbent HF users. Within that group radio hobbyists are
basically bit players. Smart and noisy bit players but nonetheless bit
players. Other users are *not* bit players and them's the folks who I
expect will quietly and decisively torpedo BPL.

No, Dan, they're not idiots. An idiot would never be able to put it all together and make it work. What they are are sociopaths. People who break laws for the fun if it. Sort of like extreme sports. The thrill of "getting away with it", and the rush of living on the edge is what fuels the excitement. Why else would someone build a 20 KW mobile radio station? An idiot couldn't pull it off. But someone has to seriously question the motives of those who do.

Getting a ham license would take all of that away. Most of these same people proclaim just how easy it is to get a ham license, yet they also claim that they have no desire to do it. Further proof that they enjoy operating illegally, and showing that they also have an alarming paranoia about the loss of their anonymity, which having a legal call sign would bring.

BPL works on conducted signals, not radiated signals. The power grid
is an incredibly poor receiving antenna, so any microvolt-level or
even millivolt-level signal from "out there" won't even show up on the
copper.

When I wrote "vunerable BPL is to interference", I meant how outside sources of interference would effect the performance of BPL. Sorry if I wasn't clear. I still have no doubt the BPL people would test for things like that. I wouldn't expect them to care much about interference, as long as they can fit it into some interpretation of Part 15 regs. Or if they can get the Part 15 regs changed. Or if they don't get caught violating the Part 15 regs. I was wondering if there's any test results explaining how marvelously robust this BPL system is going to be.

If you know where this is all explained in depth and well documented, please point me in that direction.

BPL might very well fail. Or it might hang on in a few communities. I have no idea. I'm sure, now that crackpot powerline schemes are here, they will never really go away.

Maybe, but much of the utility SW use has gone to sattelites. The bands are far quiter now than they were 30 years ago. Of course, I've got my own crackpot idea. The SW spectrum should be run rather like the way we run the National Parks. Everyone is free to use SW radio, as long as they act in a responsible manner.

If only Boy Scouts could go to Yellowstone, only Boy Scouts would care about Yellowstone.

That is General MacArthur. No, I don't think nuking the Chinks would have
been a good idea...right then. Because we didn't have a tactical jobbers.
And the collateral damage would have been too intense. Later on a couple
well placed 5 kiloton jobbers would have cleaned out a few of em.

We never intended to WIN the Korean war. Out mandate from the UN was to
push the North and later the CHINKS back to their own playpens. We did
this.

As for No VN if the Korean War was won. I disagree also. You see the Frogs
were put back into 'Indo China' at the end of WW2. Because this country
needed their support in the UN against the flowering Communist block. Of
course that made little sense since the ww2 underground of Frogland was

Communist. Whatever.

So the Frogs went back into 'Indo China'. Attempted to re-establish their little rubber empire and pissed of Uncle Ho to the max. Uncle Ho asked the US for help. We told him to piss up a rope. And rest is history as they say.

The Frogs would have got their butts kicked out of there whether we helped them or not. VN was not winnable no matter who or what did what to whom.

The power companies are not going to do a damn thing that will cost them
money. I have been fighting with ALA Power for 5 years and still don't have
it ALL gone.

All these complaint letters began with me, BTW. I got the ARRL and Riley involved and they jumped on the bandwagon. But it STILL isn't fixed.

So when they put BPL into this mess there own RFI will trash their new found toy. Can't wait. Gess its gonna be like a snake eating its own tail.

And with their track record it will be fun to watch...As they destroy HF in the process.

Bruce, there are over a hundred messages posted by you in the CB newsgroup. I'm certainly not going to post a copy of all those messages here. Any person, including yourself, can do a Google search to see those messages.

You're a CB'er, Bruce. Pointing a finger at others is not going to hide that truth. And, based on your behavior here, you're probably one of the worst type of CB'ers - rude, foul mouthed, no respect for others, using equipment illegally, and so on. Since I don't live in your hometown, I certainly can't prove that - but a leopard rarely changes it's spots. So your behavior here is probably similar to your behavior there.

The current height limit in Cedar Hills, 45 feet, is obviously way too restrictive. The ordinance would even conflict with the FCC regulations that allow CB antennas to be placed up to 60 feet on a dedicated mast or tower structure, or twenty feet above an existing object taller than 60 feet. Clearly, licensed Amateur Radio operators should have access to antenna structures taller than that. Therefore, in my opinion, Thunborg is correct to ask for a change in the zoning ordinance.

Badmouth all you want. Claim all you want. Bottom line is you bootlegging "IDIOTS" are just sicko's. Being a Ham or a member of the ARRL has nothing to do with things. And nothing you say to badmouth the Amateur Radio Service is going th change that. I could care less how many so called hams do freeband. Real hams don't. You can't get that through your heads can you? A bad CBer that happens to have a ham ticket, comes BACK to his roots in illegal CB operation....does not mean squat. As I said...Real hams don't do that.

When will the US get rid of the code test?

We are lagging behind. Don't take it for granted that the code test willl be
eliminated. We don't have the metric system, which is clearly advantageous.

Jim:
Even BEFORE they start this BPL thing, the existing power lines emanate a ton of interference anyways. It is almost impossible for me to listen to anything HF around here because the lines around here are terrible. I can only imagine how much worse it will get with adding the BPL stuff as well. I am definitely a proponent of having the utilities switching (albeit expensive) to buried electrical lines. Only exception might be where the lines need to cross a river etc.

Yep, and I am corrected. He does say "you." And, I respectfully disagree
with his observation.

>

Larry, it doesn't take being admonished by anyone to be proven that you have
a bad attitude--and one that is poisonous for the ARS. Your attitude is
more venomous than my callsign--for sure.

> >>
> >> I don't see how that's possible, Kim. After all, I'm not the one who

And, I don't think you do believe that.

>

Then, that given, I haven't been on the air for over a year, Larry. And, the only reason Riley made any comment at all about my callsign is that I was big enough to approach him about it. It proves I'm the better person. You can't even own up to your own destructiveness. Why don't you invite comments from Riley on you?

He's much too much a gentleman and scholar to be found responding to the likes of you...

> Larry, I seriously doubt Hollingsworth would have said anything if he had >known his words would be used as a basis for your harassment of Kim over >this subject for several years.

Dwight:

If that's the case, then he would have to blame Kim for that outcome, not me. After all, it was Kim who quoted Riley's comments made in a private E-mail in this public newsgroup, thereby making them public domain and subject to being used against her in the future. If I were her, I would not have done that. However, Kim was eager to make the point that she had a legal, Constitutional "right" to choose her call sign, such as it is. In his reply, Mr. Hollingsworth assured Kim that she did, indeed have that "right," but the exercise thereof was potentially harmful to the image of the ARS, to the extent that he predicted that it had the potential to take the ARS "…one step closer to extinction."

Kim's act of hubris, in making the attempt to get a well-known authority to validate her action, has backfired on her in a most inconvenient way. If Mr. Hollingsworth has any objection to the way his words are being utilized, he needs to take that matter up with Kim, not me.

> You've never been admonished by Hollingsworth simply because you've never >had the guts to tell him what you're doing.

Mr. Hollingsworth has the same access to this newsgroup as anyone else. If he wanted to do anything about it, he certainly has the technology to do so. Should he contact me with the request that I desist in using his quote in the manner in which I have been doing, I will certainly comply. However, this would not absolve Kim of her responsibility for introducing Mr. Hollingsworth's words to this public forum.

>So, since Kim was willing to
>contact Hollingsworth over the choice of her callsign (her behavior), why >don't you contact Hollingsworth to ask if he feels your behavior (your use >of his words to publicly harass Kim for all this time) has any effect on Ham >Radio?

For the simple reason that my behavior is not in question here. Kim is not being "harassed." She is merely experiencing the justified reaction to an action she took which is potentially harmful to the image of the ARS, and that is my right -- just as it was Kim's "right" to self-select a call sign with
a vulgar, sexualized, and demeaning connotation which reflects poorly on

YL radio amateurs everywhere. As someone else put it in another posting, if her call sign had been issued as a sequential assignment, then this whole matter would not be at issue. Kim deliberately chose that call sign in order for it to have the effect of generating attention to herself, and to stir up controversy. Well, it worked -- and now she is responsible for any and all consequences appertaining to her action.

As for whether my "behavior" will have any affect on ham radio, I certainly hope so. I happen to be expressing my vehement and determined opposition to an action by a radio amateur which has the potential to do serious damage to the image of the ARS. By doing so, I hope to send the message that behavior such as Kim's is not to be tolerated.
